tween the sides of the handle and occupying the same longitudinal plane as said back-spring, said back-spring comprising a body having bifurcated ends, the furcations serving as spring-fingers and being in the same plane with one another and with said blades, said blades engaging said spring-fingers when in their open position and forcing said fingers toward the longitudinal axis of said back-spring.

824,205. INTERMITTENT-ALARM CLOCK. WILSON E. PORTER, New Haven, Conn., assignor to the New Haven Clock Co., New Haven, Conn. Filed Jan. 8, 1906. Serial No. 295,065.

In an intermittent-alarm clock, the combination with the time and alarm trains thereof, of an

alarm-wheel driven by the time-train, and a vibrating spring connected with the alarm-train and engaging with the teeth of the said wheel which it tends to revolve in the direction in which the wheel is revolved by the time-train.

824,220. LENS-DRILLING MACHINE. EDGAR T. WAITE, Southbridge, Mass., assignor to

In a lens-drilling machine, the combination with lens-holding jaws or supports, of plates attached to said jaws, and having pins or projections thereon for one end of a lens, said pins extending in two different horizontal planes, and means for holding said plates on said jaws.

824,262. ELECTRIC TIME-SIGNAL. JOHN M. POWELL, Portecasi, N. C. Filed Aug. 31, 1905. Serial No. 276,583.

In combination with a time mechanism having an alarm apparatus, a key to wind the alarm apparatus and having a drum free to rotate thereon,

said key being further provided with means to lock the drum thereto; an electric switch, and a flexible element to operate said switch, said flexible element being connected to said drum.

824,309. SLIDE-BRACELET. EDWARD F. PRESBRY, Providence, R. I., assignor to Hamilton & Hamilton, Jr., Providence, R. I. Filed April 18, 1905. Serial No. 256,310.

In a slide-bracelet, the combination of the hollow members of the bracelet, with the flexible slide-strips, each secured at its outer end to the end of a bracelet member, and provided at its opposite

inner end with the struck-up engaging depression, and with the struck-up elevation, with the curved guides, secured within the cavity of the bracelet member, and each provided with a struck-up elevation, adapted to engage with the depression of the guided flexible slide-strip, and also provided with the slot adapted to receive the stop elevation which serves to limit the outward and inward movement of the flexible slide strip.

824,379. BRACELET. EDGAR A. PHILLIPS, Providence, R. I., assignor to Hamilton & Hamilton, Jr., Providence, R. I. Filed Feb. 5, 1906. Serial No. 299,598.

In a bracelet, a pair of rigid tubular members, a

flexible connecting-link *c* to telescope into said members consisting of a strip of thin metal shaped

to form a comparatively wide body portion *c*¹ from one end of which extends a long narrow spring-tongue *c*² bent over the body portion *c*¹ forming a looped end *c*³ and having a bend *c*⁴ forming a snap member adjacent the looped end *c*³ and a beveled end *c*⁵, a short spring-tongue *c*⁷ on the end *c*⁶ of the body portion *c*¹ having a beveled end *c*⁸ and bent over the body portion into a position to lap over the beveled end *c*⁵ on the long tongue *c*².

824,466. WATCH-REGULATOR. JOSEPH BRUN, Chaux-de-Fonds, Switzerland. Filed April 18, 1904. Serial No. 203,822.

A balance including an arbor and a spring, a stud to which the end of the spring is attached, in-

closing means for the balance, said means serving as a bearing for said arbor and also as an adjustable support for said stud.

824,525. LEVELING DEVICE FOR CLOCKS AND SIMILAR INSTRUMENTS. OSCAR L. BONNEY, Denver, Colo. Filed Sept. 5, 1905. Serial No. 276,935.

The combination with the base of a clock or similar instrument, of a nut embedded in the base in a manner to prevent rotation, a screw threaded in the nut and protruding both above and below the

base, and a key having an unthreaded opening, applied to the upper threaded extremity of the screw and slidable freely on the threaded portion thereof, but connected therewith to cause the two parts to rotate in unison, the threaded portion of the screw extending above the clock-base and the key being located at all times entirely above the said base.

824,537. CLOCK. ALBERT D. GARY, Lavonia, Ga., assignor of one-half to Henry Hoyt Chandler, Lavonia, Ga. Filed June 29, 1905. Serial No. 267,540.

The combination with the clock-train having an escapement shaft and wheel, of a plate having a laterally-extending arm, a pallet for engaging the

escapement-wheel mounted on the arm, a pendulum mounted to swing upon the plate, a connection between the pallet and the pendulum, said plate being provided with a bearing for engaging the escapement-shaft and a slot leading therefrom to permit removal and attachment of the plate, and a

BRITISH PATENTS.

(ABRIDGMENTS OF SPECIFICATIONS, 1905, FROM *The Illustrated Official Journal*.)

ISSUE OF JUNE 20, 1906.

3,333. HOOKS. G. BRENTON, Kent. Feb. 17.
Relates to a hook for suspending china plates, pictures and other ornaments on walls. The hook

is preferably trefoil in shape. The stalk is turned inwards at *f* and meets a piece *c* stamped out of the body.

3,360. MAGNETIC COMPASSES. A. F. C. BENTLEY, Waltham Abbey, Essex. Feb. 17.
In a compass, fitted with a sighting device, the

graduated compass rim *b* is fixed to, and rotates with, the bezel *c*. A pointer *e* is fixed in the line of sight.

3,371. CLOCKS. G. SCHONBERG, Frankfort, Germany. Feb. 17.

Electric Clocks.—A centrally-pivoted armature 13, rocking between a stop 14 and the poles 12 of an electromagnet, throws back an eccentrically-loaded fly-wheel 1, which drives a clock movement

through a ratchet-wheel 7. The circuit is made and the impulse is given by the contact of arms 17, 15, on the fly-wheel and armature respectively, the arms sliding on one another. A spring may replace the load 2 on the wheel.

3,398. LENSES. H. D. TAYLOR, Mount Villas, York. Feb. 18.

Relates to a modification of the Cooke photographic lens, described in Specification No. 22,607, A.D. 1893, to adapt it either for single use or for

conjoint use with a similarly modified lens of the same or different focal length. In this way, such lenses may be used either singly or in combination to obtain a greater range of focal length.

Fig. 1 shows such a modified lens. The stop is removed from D-D to *d-d* so that, when two are combined as shown in Fig. 2, the two stops func-

tion as one. The constructional data and the optical constants for the variously modified lenses are given at length in the specification.

3,445. MATCH BOXES, PURSES, ETC. S. M. LEVI and C. M. LEVI (trading as S. M. Levi), Birmingham. Feb. 20.

One part A of a hinged case made in two parts contains a sovereign purse K of usual form and

a match holder H consisting of a space in the case partially covered by a plate I; the other part B is formed with a depression *e*³ to hold stamps, which are kept in place by two projections. A hinged lid on the outside of the case is provided to cover this depression, and is held closed by a pin engaging in a hole in the case.

3,589. SOLDER. A. W. KING, London, and ADVERTISING MIRRORS CO., London. Feb. 21.

A solder, by means of which aluminum may be soldered to aluminum or to another metal, is obtained by melting together, at a low red-heat, 10 parts of soft solder, five parts of pure zinc, and five to eight parts of aluminum. The aluminum to be soldered is coated with this solder before the soldering operation itself, which is effected by means of ordinary solder.

3,632. PURSES. A. W. COULTER, Richmond, Surrey. Feb. 21.

In the construction of a sovereign purse of metal provided with two chambers, two channel-section metal strips, bent into a horseshoe shape and having slots *a* cut in the flanges, are fitted together,

so that each piece projects slightly above the other. A partition *b* separates the case into two chambers. Within each chamber is a spring *c* with plates *e*, *d*. The latter forms the usual support for the coins, while the former projecting somewhat prevents the coins from the opposite chamber from slipping out. To insert a coin, it is laid on this projecting plate *e*, which is then depressed and the coin pushed horizontally along into the other chamber.

3,691A. SPRINGS. C. D. ABEL, London.—(Siemens & Halske Akt.-Ges., Berlin, S. W.). Feb. 22.

The springs of clockwork are made of tantalum or of alloys thereof, with other metals such as iron, or with carbon or other hardening-media. The tantalum or alloy is best fused *in vacuo* by the electric current, and is annealed at a moderate

temperature on plates or in drums, or at higher temperatures *in vacuo* by electric resistances, or directly by passing the current through the object.

3,691B. PENS. C. D. ABEL, London.—(Siemens & Halske Akt.-Ges., Berlin, S. W.). Feb. 22.

Pen nibs are made of tantalum or alloys thereof with other metals. The tantalum may contain small quantities of other substances such as carbon, silicon, or boron, serving to impart greater hardness thereto. In the process of working, the metal may require annealing. This may be done by bringing the nibs in contact with heated plates or drums. If a high temperature is required, heating *in vacuo* by electric means may be employed. Alloys of tantalum with wolfram or iron may be used.

Complete specifications accepted June 23, 1906.

What Must be Done to Protect Patents and Trade-Marks in Hungary.

UNDER date of April 9, Consul General Frank D. Chester, of Budapest, reports on the injury resulting to American export interests from their failure to adequately protect their goods in Hungary. The consul general calls the attention of machine exporters to the necessity of obtaining Hungarian patents and registering their trade-marks in Hungary, at the same time designating a Hungarian attorney to prevent infringements on the same. He cites the case of a well-known American firm engaged in manufacturing incubators, which firm will sustain a loss of about \$3,600 yearly in case it fails to prove promptly in the district criminal court of the city of Budapest, under section 12 of the Hungarian patent law, that its goods were used in Hungary (or prepared to be used) before the filing of the application for a certain patent granted to a Hungarian firm for incubators of a somewhat similar form and system.

Thus far no clue has been obtained to the thief who broke into the store of Maurice Duncombe, Wattsburg, Pa., and stole four dozen gilt spoons and about 25 watches. A reward of \$25 has been offered for his apprehension.

Mainspring Don'ts

Simple Hints for Those Who Handle Mainsprings

Don't fail to provide yourself with the best mainspring winder that can be obtained. See that the hooks on all arbors of the winders are no longer than the thickness of the thinnest spring, and thus avoid kinking, and therefore unnecessary breaking of mainsprings.

Don't use a mainspring that is too long, because it fills the barrel and prevents that part, or the mainwheel, from making the required number of revolutions, with the consequence that the watch will not run as it should after each winding.

Don't use a mainspring that is too strong, because it will set, increase the percentage of breakage and injure the watch.

Don't use a mainspring that is too wide, and be sure that the tip and brace do not extend beyond the limits of the cover and barrel.

Don't forget that a mainspring should not occupy more than one-third the diameter of the barrel, thus leaving two-thirds to be divided between the arbor and winding space, to enable the watch to run about thirty-six hours.

Don't expect a mainspring to be flat if you put it in the barrel with the fingers. This method usually injures the spring, gives it a cylindrical form, and thereby increases the friction in the barrel.

Don't bend the inner or outer end of the mainspring with flat-nosed plyers, but provide yourself with specially made round-nosed pliers which will give a circular form to these parts, prevent short bends, contract the inner coil, and thus secure a closer fit to the barrel arbor without injuring the spring.

Don't expect other than a properly fitted flat mainspring with rounded edges to produce the least friction in the barrel, allow the greatest amount of power to the train, and give the best results as to time, service, etc.

Don't expect a mainspring to always endure extreme changes in temperature, or electrical disturbances, or straightening at full length, or neglect from lack of cleaning and oiling.

Don't expect a watch that needs cleaning or other repairs to run satisfactorily by merely putting in a new mainspring.

Don't expect a mainspring to plough through too much dirt.

Waltham Watch Company

Waltham, Mass.

THE HOROLOGICAL REVIEW.

Some German and French Horological Inventions.

PLATE FOR MANIPULATING WATCH SPRINGS.

THIS plate is designed especially for the use of watch repairers in truing springs. It prevents the shadow cast by the spring in operating with an ordinary slab of ivory or even a simple sheet of paper. Fig. 1 gives a perspective view and Fig. 2 cross section of the plate.

It consists of a disk of glass *a*, flat and

FIG. 1.

mounted on a pedestal by means of pillars *c*, which keep it in a horizontal position at a desired distance from the pedestal. On the latter is fixed a round slab *d* of ivory, celluloid, enameled metal, or any other white, polished material. In order to true a spring, this is simply placed on the glass disk and worked in the usual manner. The spring is lighted from above by daylight or

FIG. 2.

by a lamp, while it is also lighted from below by the same sources of light, the ivory slab serving as a reflector. The coils, which appear confused as ordinarily observed, can thus be readily distinguished and separated on occasion, even without the aid of a microscope.

DATE WATCH.

In date watches, levers or outside pushpieces are generally made use of for setting the hands of the date, days and months, as

well as the disk of the lunar phases, or else a mixed system of pushpieces, levers and star wheels, projecting slightly beyond the setting of the glass; but hitherto a system embracing only star wheels has never been employed. Such a system is illustrated herewith. (See Fig. 3.)

In this watch the hands *q* of the date, *m*, of the months, and *i* of the days, as well as the disk *p*, of the lunar phases, are all governed for their setting by star wheels slightly extending beyond the bezel of the glass. The bezel, which is not given in the drawing, is adjusted as ordinarily on the notch *c* of the rim *C* of the case.

The wheel *M*, solidly connected with the hand *m*, is governed by the wheel *A*; the wheel *Q*, solidly connected with the hand *q*,

FIG. 3.

is governed by the wheel *B*; the disk *p* of the lunar phases, solidly connected with the wheel *P*, is governed by the wheel *C*; and the wheel *J*, solidly connected with the hand *i*, is governed by the wheel *D*. All these setting wheels are placed under the dial *S*, and project slightly beyond the bezel of the glass through openings, allowing the action of the finger.

WARNING SYSTEM FOR STRIKING CLOCKS.

In this system the warning is secured in the following manner: On the pinion immediately governing the barrel of the movement is a wheel of 80 teeth. The pinion should project beyond the plate from seven to nine millimeters on the side of the dial.

At the end of the pinion is a similar wheel of 80 teeth, furnished with 10 pins, which serve as lifts for one or more hammer rods, according as one or several rods are arranged to give one or several strokes, together or separately, as in cuckoo clocks.

This wheel of 80 teeth and 10 pins actuates all the dial work by means of a pinion of eight leaves, placed below or immediately above the hour wheel. This should be free on the arbor of the center pinion. The hammer rods and the bells are placed as in the

FIG. 4.

ordinary movements of clocks in the side of the movement, working the system. The bells are placed one over the other on the

FIG. 5.

same support, but they may be placed differently.

The system consists in the adaptation of the train. The rods, hammers and bells are only accessories.

NEW FORM OF WATCH CASE.

The case illustrated in Fig. 4 needs but a short explanation. Those who have seen the old, double case watches will understand the combination. A ring surrounds the movement. It bears the pendant and the

An Argument for the ELGIN Dealer

The records of the Weather Bureau show a difference of 181 degrees between the extremes of heat and cold in the United States. A watch to be adapted to the use of the traveler must be able to maintain its accuracy under widely varying conditions of temperature. One reason why the

ELGIN Watch

is pre-eminently the traveler's watch is found in the fact that all Elgin Watches are tested by oven heat and by refrigeration before leaving the factory. Their wonderful timekeeping qualities are undisturbed by extremes of temperature, damp or drought, jar or jolt, or by varying positions.

LOWEST
UNITED STATES
TEMPERATURE
63° BELOW

HIGHEST
UNITED STATES
TEMPERATURE
118° ABOVE

The above is one of the many good arguments for the Elgin Watch, all of which help the dealer to sell Elgins.

See Jobbers' list for prices or write the Company.

Every dealer is invited to send for the Elgin Art Booklet, "Timemakers and Timekeepers," illustrating the history and development of the watch.

ELGIN NATIONAL WATCH COMPANY

NEW YORK OFFICE, 11 John Street.
SAN FRANCISCO OFFICE, 206 Kearny St.

pe of the pushpiece. The case closes with groove snap and has two notches, A and for the passage of the pendant and the shpiece.

WATCH HAVING PLATE AND PENDANT IN A SINGLE PIECE.

In this watch, one form of which is illustrated in Fig. 5, the plate and pendant are formed together of a single piece of metal, the periphery of the plate also forming the rim of the case. A plan and a cross section are shown following the line XX, the bezel of the glass not being represented in the former figure.

The plate *P* and the pendant *A* of the watch may be stamped out of the same piece, or cut out in any way. The circumference *C* forms the rim, and the back of the case, as well as the setting of the glass are fitted on the notches *c, c'*, made respectively on and under the plate.

Instead of a single back, *B*, two may be adjusted; that is, a dome and the usual back. A glass may also be placed under the back *B*, the glass being fitted, either directly on a corresponding notch of the plate, or by the intervention of a bezel. A hunting watch may also be formed in the same way by placing a second back on the setting of the glass on the side of the dial. A projection *a* may be formed, if desired, on the circumference *C*, forming the rim. The backs or coverings may be fitted with or without hinges; these may be formed in the body of the plate or inserted.

The forms and dimensions of the plate and the part forming the pendant, as well as the metal employed in the construction of such a watch, may, of course, be varied at will. This is true also of the movement, which may be a key watch or a stem winder, with cylinder, lever or other escapement. The watch is simple, solid and economical in manufacture, since several pieces may be omitted, and some of the handwork, especially in putting in the movement, may be saved.

Horological Notes.

GREATER than ever, jewelers say, is the demand for women's watches this year. Why this should be the purveyors have not undertaken to explain. Of course, with woman's position of increasing importance in the affairs of the business world she practices more frequently the virtue of punctuality. The increased sale of tiny timepieces, however, cannot be accounted for through that circumstance, for the varieties that are being sold are of the small, showy sort that are pinned on the front of the dress where the actual wearer cannot see them. It is doubtful, too, if they are being worn in increased numbers through any desire of the owners to add to the convenience of the watchless public.

The wind recently caused the dome of the courthouse at Independence, Mo., to vibrate so much that one of the heavy pendulums of the big clock was dislodged. It fell to the stairway below, narrowly missing the heads of several persons. The county court has been considering the rebuilding of the tower, but last Saturday postponed the matter on account of the cost, which would be about \$15,000.

The Addimeter.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from the *Revue Internationale d'Horlogerie*.)

THE new measuring instrument illustrated herewith, was invented by Ch. Rode, manager of the Rode Watch Co., and Maurice Picard, Chaux de Fonds. It is being manufactured by the house of Henry Picard & Bro., and is called the addimeter. It is intended for gauging the distances between watch plates and bars, giving in this manner the exact height of staff shoulders of mobiles (stuffs of pinions, pallets, etc.).

These measurements have hitherto been difficult to obtain by means of micrometers of the ordinary construction, which have attachments, such as jaws or points moving in opposite directions, and the thickness of

A NEW MEASURING INSTRUMENT.

which prevented the measurement of some of the shoulder heights of such mobiles as mentioned.

The addimeter has only one attachment or jaw, which is pierced for the fixing of a staff. This staff projects in both directions, up and down, as shown herewith. The extremities of these projections are intended for points of contact in taking measurements. In this manner the thickness of one of the jaws of the old fashioned micrometer is suppressed and greater facility of the entry of the one jaw modified between the hole jewels is provided.

The device, which is constructed in the same manner as the "selometer," is eminently practical. The platform for the placing of the watch plate is movable and may be adjusted and held in a proper position by a female screw, placed in the lower part of the base of the apparatus. In addition to the measuring arbor in the jaw, another movable arbor is fixed in the bottom of the mechanism, but not connected in any manner with the first. This second arbor serves for the support of and to keep in place the jewel of the watch plate.

The principal of gauging is based on the fact that the measuring arbor in the jaw has a dimension in millimetric units; by means of the movable platform the num-

ber of units which any mobile may contain is recorded by raising or lowering the watch plate until the long hand stands at 0. Then the pressure on the lever will bring the upper projection of the arbor in the jaw in contact with the jewel in the bar and the small hand will indicate the fraction of a millimeter in hundredths, which is to be added to the units of millimeter. The sum is the exact height of the shoulders of the mobile, of which should be deducted a small proportion for end shake. It may become necessary, when this tool is applied to general use to modify the form of the jaw and make it right or left, knee shape or of any other convenient form.

Clock Soon to Celebrate the 200th Anniversary of Its Ticking.

AN old and interesting grandfather's clock was shipped from Rochester, N. Y., as a wedding gift, recently, by C. H. Barker. The clock will be 200 years old next year, and was until recently the property of Robert T. Murphy, of Alexander St., that city. It is an heirloom and was given to Mr. Murphy by his grandfather, with the understanding that it was to go to his lineal descendants, or, in default of such, to another branch of the family.

One of Mr. Murphy's nieces was married a short time ago and he decided to send it to her as a wedding present. He had Mr. Barker repair and clean the clock and ship it to the bride in Pennsylvania.

The clock is seven feet two inches high and has in general the appearance of copies of such clocks made to-day. It is of ash and was painted a yellowish color with brown trimmings. It is very heavy, being of boards one inch thick and hand made. The dial is of wood, three-eighths of an inch thick. The diameter of the dial is 12 inches. The hands are antique and necessarily long. The clock is run by weights and wound with a large key which reminds one of a crank.

Under glass in a wooden frame, which is attached by screws to the inside of the case, is a label, which says:

HARGRAVE & SON,

Clock and Spinning Wheel Makers.

Finest ash of all kinds for sale cheap, rigging spars, splices and caulkers' oakum. A goodly import of Norwegian pitch direct from England. Trunnels spokesaved by the hundred. All of Chandlers' supplies. Loft and salesroom over Bell's Tavern.

Narset Square, Boston, Mass.

1707.

Besides this advertisement there is within the clock, where the pendulum swings, a screw on which is hung an old-fashioned bootjack. The clock has been in use right along and will probably tick off many more seconds, hours and days.

In the possession of Major D. H. Kelton, Montpelier, Vt., is a clock said to be over 100 years old. The clock was made at Osburne's factory, in Birmingham, Eng. It has brass works and shows the days of the month and the phases of the moon. The clock stands eight feet high and is finished in brass trimmings. The case is made of inlaid cherry of a very pretty grain.

Is Your "Middle Case" Empty?

HIGH PRICE MEDIUM PRICE LOW PRICE

In watches, Mr. Jeweler, there are three classes necessary to serve all customers—to make up a complete stock.

The high-priced watch, the *medium-priced* watch and the low-priced watch. The medium-priced watch is the *one important* class from the *profit standpoint*. That is why the

New England

THE WATCH FOR THE GREAT AMERICAN PEOPLE

fills the most important place in the jeweler's stock. It is built for the great mass of buyers of medium-priced goods. It is the highest grade, medium-priced watch made.

With both Ladies and Men New England Watches are sellers, but far more, they are without competition; they have the medium-priced field all to themselves; they are indispensable to *your* "middle case," Mr. Jeweler.

And there's another point of vital interest. We are talking New England Watches to the public, and are going to talk them convincingly again this Fall *through extensive advertising*. We are widening their already wide and exclusive field and making them more necessary to you. Frankly, the results are showing in doubled sales. But they will do better.

Remember, the jeweler handling the New England line will get the trade this Fall and this Christmas and ever afterwards. Advertising is going to do it.

If *your* medium-priced case is empty; if *you* don't handle the New England Watch, this is a mighty favorable time to take the matter up with us. Write us for details of our carefully worked out plans for bringing you business. Let us help you.

Address,

DEPARTMENT OF PUBLICITY

NEW ENGLAND WATCH CO., Waterbury, Conn.

New Style of Watch Without Hands.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from the *Revue Internationale de l'Horlogerie*.)

THE making of new designs of watches without hands has in recent years been selected by inventors. Of the latter some preferred to direct their efforts to the production of new models of flat or extra watches; some others have made novelties in watches, where the balance and parts of the escapement were exposed to view in some part of the dial, while still others have made specimens of watches which would go for one or two weeks with single winding.

It will, therefore, interest our readers

FIG. 1.

When we bring to their notice a description of a newly invented watch without hands under the name of "Domina," which presents an attractive novelty and is a distinct advance in the characteristics of such a watch as regards simplicity and solidity in its mechanical construction. Here instead of the usual complicated construction offering very little satisfactory service in certain watches without hands, for instance the one with double wheel, governed by the action of a spring motion producing the sudden jump for the change of the minute; or yet the one with single wheel, where the cutting of a number of teeth has created a balance in the wheel which at the moment of the change of minute makes a sudden jump against the pinion of the fourth wheel, to effect change of the cipher. The new watch which is described to-day presents marked advantages.

Attached to the staff of the center wheel is a disk, the rim of which shows a division from 0 to 60, and the ciphers 5 to 60 following each other in sub-divisions of 5 marked 5, 10, 15, 20, etc.

These divisions and ciphers marked on the disk are visible through an opening cut out of the dial, below which the disk revolves and turns once per hour.

This disk, indicating the minutes, carries at a certain point on its circumference an index finger, which at every turn presents a tooth on a star wheel of 12 teeth,

the staff of which is pivoted on the plate in such a manner that it turns 1/12 of one revolution for an entire turn of the minute disk. A jumping spring controls at the same time the teeth of the star wheel, to hold the latter in a steady position till a change for a successive cipher is in order. These ciphers from 1 to 12 are seen through a second opening of the dial above the one showing the minutes. (Fig. 2.)

The center wheel controls by means of

FIG. 2.

the third wheel and the next pinion of the fourth wheel the pinion of which carries the second hand and which pinion describes one revolution per minute of which a subdivision of 60 parts is traced on the dial.

Time as Indicated by Some New York Clocks.

WHAT'S the matter with the clocks in Broadway, between 23d and 45th Sts.? asks a writer in a daily exchange. The other day a friend set a valuable gold watch by the clock in front of the Fifth Ave. Hotel. When he got to 28th St. the clock in a big store near the corner was 10 minutes ahead of the time on his watch. There was a difference of seven minutes between the Gilsey House clock and the one across the street, and the clock in a jeweler's store two blocks up was two minutes faster than the hotel timepiece.

In the Hotel Marlborough the clock was four minutes faster than the one in the jeweler's shop diagonally across the street, and the big clock on top of the Cadillac was three minutes behind the one in the Marlborough. There also was a difference of almost five minutes between the clock in front of the Metropolitan Opera House and the one on the Cadillac.

A clock in the tower of the Town Hall of Harrison, N. J., recently developed a tendency to erratic bursts of speed sandwiched between attacks of abnormal laziness. There was apparently no cause for this, the works, on examination, appearing to be all unimpaired. Recently a passerby noticed a commotion among pigeons flying around the face of the clock, and, watching them, found that one of them was comfortably roosting on the hand of the clock and others were trying to perch on the slanting arm. It is now believed that the birds have been the cause of all the trouble.

A New Watch Constructed With the Tourbillon Escapement.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from *La France Horlogere*.)

A WATCH has been shown to us by Paul Loichat, Charquemont (Doubs, France), with a visible rotary escapement intended to keep perfect time in all positions. The escapement being visible in the dial, these watches can be used to advantage as a show window attraction.

Under the name of the "watch with a phenomenal tourbillon," it has been patented in France and in other principal countries. Its size is 19 lignes.

The five parts which constitute the es-

WATCH WITH VISIBLE ROTARY ESCAPEMENT.

capement are placed on a rotating plate, which makes one revolution per minute.

A German Inventor's Mode of Tightening Loose Hand Setting Posts.

A CONTRIBUTOR to the *Deutsche Uhrmacher Zeitung* describes a tool for repairing loose hand setting posts, illustrated herewith. *A* is a brass stake 3 cms. long and 7 mm. wide and thick; *b* is a piece of watch spring somewhat longer than the brass stake, *a*, as shown at *b*, and which is

DEVICE FOR TIGHTENING HAND-SETTING POSTS.

attached to *a* by a screw at *c*, which leaves to the long end an elastic freedom at *b*.

The brass block *a* has at *d*, a groove covered by the spring *b*, by means of which the setting post, *f*, to be operated upon, is held in place. The spring, *b*, has an opening at *e*, through which the setting post, *f*, is made accessible to the center punch, *g*, which, by the blow of a hammer, raises a burr on several of them on the setting post.

A Booklet, Showing Complete Prices on Watches in all Sizes, for the Asking

This small price-list, printed in RED and BLACK, gives prices on more than 1000 complete watches. Prices on the 25-year and 20-year cases are printed in different colors.

OPTICAL DEPARTMENT

The Optometrist's Catechism.

A SERIES OF QUESTIONS AND ANSWERS ON ELEMENTARY OPTICS, IN CATECHETICAL FORM.

By E. Le Roy Ryer.

Copyright, 1903, by THE JEWELERS' CIRCULAR PUBLISHING CO.

(Continued from issue of June 20.)

(Answer to Question 656 Continued.)

THE NEW OR DIOPTRIC SYSTEM.

The inaccuracies and inconveniences of the old system became so apparent that a new method was sought, which resulted in the introduction of the meter in measuring the focal distances of lenses and in numbering them.

In 1875 the Ophthalmological Society, convened at Heidelberg, adopted as a unit of measurement a lens having a focal distance of one meter. It further agreed to call this unit of measure a "dioptry"; the system of numbering based upon this unit is called the "dioptric system." Efforts have been made to call this standard unit a "meter lens," but while it is a well chosen term, embodying the definition of the object it serves to designate, and requiring no further explanation, it has nevertheless failed to become well established.

With this system we need no longer concern ourselves about the radius of curvature; we measure the refractive power of the lens, caring, as a rule, little or nothing about its refractive index or its radius of curvature so long as it produces the desired optical effect.

The focal distance is not measured in inches either, but with the meter (not with the centimeter or millimeter).

The meter is equal to $39.37 +$ English inches. It was originally defined as $\frac{1}{10,000,000}$ of the total distance (on the earth's surface from the pole down to the equator. In the United States the value of the meter is legalized at 39.37 inches, while in England and France its exact value is given as 39.37079 inches, and in some instances it is carried out to 39.3707905. For practical purposes 39.37 answers, and in many instances the round number 40 is employed.

A lens therefore which causes parallel light to focus at 39.37 inches distance from said lens is the standard unit of measurement, and such a lens is termed a 1.00 dioptry. A lens that will focus parallel light at half a meter (about $19\frac{1}{2}$ inches) must be twice as powerful and is a 2.00 dioptry lens, and one that will focus parallel light at two meters is only half as powerful as the standard one meter lens, and is termed an 0.50 dioptry lens.

The interval of a whole dioptry is, of course, too great for a complete series of optometrical lenses, and intermediate lenses have been added at regular intervals of one-eighth dioptry and numbered in deci-

and the following is all that need be kept in mind:

If you have dioptries and wish the inch values, divide the dioptric value into 39.37, and the quotient will give the inch value. Thus, to find the focal distance in inches of a 3.00 dioptry lens, divide 3 into 39.37 and the result, $13\frac{1}{3}$, gives the desired result.

Having the focal distance in inches you can obtain the dioptric value by dividing it also into 39.37. Thus, if the focal distance is 13 inches, the dioptric value of such a lens is $39.37 \div 13 = 3.00$ dioptry. Rough-

TABLE SHOWING RELATIVE VALUES OF LENSES ACCORDING TO NEW AND OLD SYSTEM

imals as 0.12, 0.25, 0.37, 0.50, 0.62, 0.75, 0.87, 1.00, etc. Thus addition and subtraction of strengths with the dioptric system is infinitely more simple than with the old inch system. On the other hand, if we wish to add and subtract focal distances instead of powers it is sometimes simpler to do it in inches. In case of any such event occurring, it is well to be able to know how to change dioptric values into their equivalent inch values. This is a very simple process,

ly speaking, if you have one and want the other divide into 40.

These rules hold good while the new system of numbering has been employed, but to find the number of the old system corresponding to a given number of dioptries, 41.73 (instead of 39.37) must be divided by that number. The whole number 42 is usually employed in these cases. Thus a 2.00 dioptry reduced to the old system number would be a No. 21 inch, i. e., $42 \div 2$,

Optical Department.

henceas by the new system a 2.00 dioptry equals a No. 20 inch, *i. e.*, $40 \div 2$.

Everybody capable of judging agreed that was absolutely necessary to abandon the system of numbering which was based upon the radius of curvature of the lenses, and that the metric system was the proper substitute, but some claimed that it would be better to write the focal distance, as the number of the lens instead of numbering it according to its refractive power. This claim is not tenable because the focal distance is virtually to be found expressed in meters in the numbers of the new system, since it is the inverse of the dioptric value; for instance, a 5.00 dioptry has a focal distance of one-fifth of a meter.

The accompanying table, arranged by Lantholt, shows the relative values of lenses numbered by the old and new systems. In these calculations the index of refraction was taken as 1.53, that of glass generally used in making spectacle lenses:

(To be continued.)

Why Many Fail With the Skiascope.

THAT the results obtained with the shadow test do not always agree with the subjective findings cannot be denied. That there can be but one perfect correction must also be conceded; therefore, when two tests do not agree one at least must be wrong. That the subjective and objective tests are based upon some principles is well known. Why, then, do they disagree?

This problem attracted the author's attention some time ago, and immediately investigations were instituted toward discovering why the skiascope did not give trustworthy results or, more definitely, why it showed high astigmatic errors wherein subsequent tests proved no such error to exist, and why, in cases where high astigmatic errors did exist, did it fail to disclose them?

Like many similar problems this has a simple solution, so ample, indeed, that it seems to have been studiously disregarded and more complicated solutions sought. For instance, some claim that false skiascopic findings are due to the irregularity of the retinal tissue; others that they were due to the fact that we did not refract the muscular region, and still others claim that such findings are due to our refracting at the optic disk, which has a natural, physiological depression, and so on.

These may be in part the cause of the trouble, but careful investigation showed that the chief source of error is due to the tilting of the crystalline lens while the eye is under test.

The general practice has been to direct the patient to look "just over my head" or "just past my right ear." This necessarily causes a decided tilting of the crystalline lens, and the closer the optometrist works the more marked is this tilting; because the eye must be turned at a greater angle to clear the operator's head. It is assumed that every optometrist knows that if a spherical lens be looked through obliquely or with the plane of the lens not at right angles to the line of vision, a cylindrical effect will be created.

With the patient looking over the top of his head, the author noted time and time again an "against" motion in the vertical meridian that required a 200 dioptry cylinder to neutralize, yet no astigmatic error could be uncovered subjectively, nor could its correction be tolerated; in these cases the horizontal meridian often showed a "with" motion. In other cases, with patient looking at a fixation object to the right or left of operator's head, a false astigmatic condition was noticed on the horizontal meridian. Thus the position of the error varied with the position of the patient's head. This gave the clue. With this in mind, when such a case presented itself, the skiascopic test was made with the patient looking at a small letter-chart attached to the mirror; the cross bracket mirror was the style used, and no such astigmatic findings were obtained. At the same time the test was made nearer the macula, which, while it causes a slight con-

are oblique use the dynamic test only. Thus, by testing horizontally when patient's eye is tilted vertically you avoid the cylindrical error, as this is confined to the vertical meridian, and this error is confined to the horizontal meridian, while the eye is turned to the side, so one is then safe in testing the vertical meridian. To attempt to correct both meridians with the eye fixed at one point is bound to result in error in one meridian, and herein lies one of the chief, if not the chief, cause of failure with the skiascope.

E. L. R.

The Health Ray Lens.

ILLUSTRATED below is a photo made with the best quality "Health Ray" lens and the regular spectacle lens. We know that when light strikes photographic paper it turns it black. The right hand lens in spectacle frame is of regular glass, the left hand lens is of "Health Ray" glass, show-

PHOTOGRAPH SHOWING TOTAL TRANSMISSION OF LIGHT BY "HEALTH RAY" GLASS.

traction of the pupil, cannot be considered a hindrance to the skillful skiascopist, and the more reliable findings far outweigh any objections to this method; the contracted pupil also eliminates the peripheral area that forms a source of trouble in many instances.

If, however, the operator desires to use the static instead of the dynamic method, as above described, the patient must look off in the distance, and to so look must look either over the top or past the side of the operator's head. To practice skiascopy and avoid the mystifying cylindrical effects the author suggests the following rules be followed, these rules being the result of careful observation and having been tested and proven trustworthy in hundreds of cases: When employing the dynamic test have patient look at the chart on bracket mirror. When employing the static test, have patient look over your head while you test the horizontal meridian, but when you test the vertical meridian have patient look to your side on a level with his eye.

In cases where the principal meridians

ing that the latter transmits all the light, while the former or regular glass does not transmit it, thereby not affecting the paper to so great an extent.

The lower part of the illustration shows the result obtained with a block of regular glass (right), 35 mm. thick and a block of "Health Ray" glass (left) of the same thickness.

Another Suggestion Offered for the Advancement of Optometry.

PATERSON, N. J., July 5, 1906.

Editor of THE JEWELERS' CIRCULAR—WEEKLY:

In reference to establishing a national academy of optometry, I would say that I am heartily in favor of anything that will tend to lift the refractionist and our profession to a higher plane. I am not familiar with the details for establishing the proposed academy and do not feel myself competent to suggest a plan for its organization.

Generally speaking, the optician or refractionist needs a better optical education. There should be some standard of education agreed upon and all optometrists should endeavor to work up to this point. A systematic course of study that the busy refractionist could take up at home would be appreciated by many who wish to increase their knowledge of optics and cannot leave their business.

RETAIL JEWELERS ADVERTISING

The use of this department is open to every retail jeweler and optician. Forward for criticism your newspaper ads., booklets, catalogues, novelties, circulars, etc. Ask advice and offer suggestions. Replies in these columns are unbiased. Make letters as full and particular as you desire. Every letter and ad. sent will receive full attention, though the publication of the matter may sometimes be delayed several weeks.

How Shall I Begin to Advertise?

(Continued from issue of June 27.)

WHEN the head of a business is uncertain about his venture in advertising, and the different advertising representatives only make him more uncertain and confuse him, then there is only one thing to do. The most reliable, experienced and time-tested agency and service should be entrusted with the work. There is no safety short of this.

The amount of appropriation is usually the next vital concern. Here again the same conditions prevail. Advertising is the most terrible sinkhole that ever grew on the face of the earth. Nobody has ever yet filled it up.

Therefore it is of the most vital importance that an appropriation be made and spent in the light, not in the dark. What amount is the smallest with which to secure the largest proportion of results? How deep ought I to dip into advertising, to start off with? What will a good, vigorous, common sense campaign cost? These are questions of much importance which an advertiser asks and ponders over.

The truth is that an appropriation for advertising should not be made with the idea of appropriating, and then advertising up to it. That's wrong in principle. Lay out what will be the very best campaigning possible to do, and then figure on its cost. That amount ought to be the appropriation.

Too much emphasis cannot be placed on the need of enough money to push an adequate campaign. I don't mean a lot of money to make a big dash, but enough money to pay for what sound advertising judgment figures out as necessary for lasting and resultful success.

Every advertising campaign to be begun presents certain conditions to be met, certain things to be accomplished. There are so many possible customers to reach, there is this and that competition to meet, this and that resistance to offset. There are certain conditions of human nature to be considered, certain merchandising considerations to keep in mind—and there's your problem!

Now, what the advertising agency does is to use its experience and knowledge—the more it has, the more valuable its services are—and arrive at an estimate and outline of a plan which will meet every consideration. Copy, media, selling plan, all will conform to every consideration in a way to make the most of them.

But meantime the advertiser can figure out his own side of the matter, and keep his advertising on a solid basis. If he is

a mail order advertiser, he must figure out very closely just how much he can afford to pay for inquiries. That is, what sum must be the maximum that he can profitably pay for an inquiry. By figuring on turning one-fourth of his inquiries into orders he can get at this basis, by close reference to the margin of profit on his goods. He ought to do just the same thing that any other business house does with the sales department—he ought to know exactly how much he can afford to spend in selling his goods. When returns come in, all he need do is to divide the total cost of his advertising with the number of inquiries, and he will know exactly where he stands on the ledger. The gamble will be out of his proposition.

It is a sad mistake to crowd a mail order proposition into too little space. Larger space will nearly always bring in enough increase of inquiries to pay for it. But space should be no larger than necessary to tell a new story. Here is where the value of keen service comes in—a master of condensation can oftentimes cut down an ad a half, while actually heightening its effectiveness.

The general advertiser has no better criterion to settle on the amount of appropriation than to figure out what percentage he can afford. And in making this judgment, he ought to remember that advertising has as much sound claim for as the sales department costs, even more. The modern idea is to combine both as properly coming under one selling expense, and to divide at least equally.

There are a vast number of manufacturers who ought to advertise, and who know it, and desire to do so, but are holding off because they don't see where they're coming out exactly, and have dubious feelings of uncertainty about objections the dealers might raise and other trade conditions.

The bull's-eye of advice to those who want to know how to begin to advertise is to go at it in a thoroughly business-like way and put the keenest brains and experience possible to secure into the copy, follow-up and campaigning; and to keep a keen business eye on everything that is done, so that the campaign won't run away with you and land you in a ditch.

[THE END.]

Edward Delano, who, about 20 years ago, was engaged in business in Watertown, N. Y., on the application of George H. Fenner, his trustee, was recently examined as to his sanity and subsequently committed to the St. Lawrence State Hospital.

Recent Booklets and Folders.

“SUGGESTIONS for Wedding Gifts in Cut Glass and Silver” is the title of a booklet, 4½ by 8¼ inches, issued by Ambrose Kent & Sons, Ltd., Toronto, Ont. The cover pages are printed in blue and silver; the inside pages are lettered A, B, C, etc., instead of being numbered. The half-tones of appropriate wedding gifts, including brooches, scarf pins, wedding rings, miscellaneous silverware and cut glass articles are printed in light brown. The price is printed in black under each article.

* * *

Henry Birks & Sons, Montreal, Ottawa and Winnipeg, have recently issued two tastefully designed folders, which, at first glance, look more like booklets. One is called “Communion Silver” and contains prices and illustrations of memorial gifts, such as may be given to a church in memory of a departed relative or pastor. It measures 6½ by 5½ inches, the cover pages being an ecclesiastical purple. The front cover page is set off with a red border with silver interspacing. The title is printed in red in the center, with the firm name in silver, in the lower left-hand cover. The make-up of the three inside pages is strictly rubrical, the type being ecclesiastical and the printing red and black. The other folder mentioned above is designed to appeal to first communicants. It is 7¼ by 3 inches and contains three pages of attractive half-tones portraying crosses, crucifixes, roses, holy medals and watches. The text is written in French, the color scheme of the cover pages being similar to the foregoing—red and purple. The title, “Cadeaux de première communion,” is centered under a red cross.

What Some Jewelers Say.

SPECIAL silver for wedding gifts.—Our line of silverware in the plated goods is made especially for us. Every piece receives at least one-fourth heavier plating than any other make of plated ware. It is the most beautiful and durable plated ware ever made. In sterling solid silver we have a choice selection. H. Poppendick, Columbus, O.

Jewelry of the highest grade is here in great variety. We firmly believe we have gathered together the choicest collection of watches and jewelry ever assembled under one roof. Rings and brooches in exquisite designs; some are set with stones of unusual brilliance. Fine repairing satisfactorily done. J. S. James, Richmond, Va.

Diamonds and other gems.—Our prices are based on actual worth, and when quality is considered, they are the lowest. All correspondence given careful attention. Goods sent on approval, express prepaid. Galt & Bro., Washington, D. C.

Watches.—A good watch—one that can be relied upon—is a satisfaction and a necessity to every progressive up-to-date person. If you desire a good timepiece, please give me a chance to show you my stock and talk the matter over with you. Watches and jewelry repaired. All my work is guaranteed. Do you realize what a saving in expense this means to you? Do you? R. A. Horn, Walla Walla, Wash.

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

An Ingenious Novelty for the Effective Display of Jewelry.

ILLUSTRATED herewith is a simple, practical novelty in the way of window dressing of but trifling cost. It opens a wide field to ingenuity and taste by the exercise

dark blue, and articles, such as brooches, badges, charms, rings (singly or in boxes), lockets, in brief, anything of small size, are to be placed, or when necessary, hung in the openings, for which purpose ordinary pins are sufficient.

With these "Decorators" such designs as

A Business Talk to Salesmen.

(By W. N. AUBUCHON, in *AdSense*.)

(Continued from issue of April 25.)

JUMPING from conclusion is like sliding off the top of a haystack before taking a look around to see where Dad left the pitchfork. You are pretty darn sure to hit it if it's anywhere around, and will get a jab that brings you to a realization of the fact that a little careful investigation before you jump anywhere, is just ordinary common sense.

Look your creditor in the eye and shake hands with your competitor. Don't sink and don't snarl. Hold your head up, draw in deep breaths of God's oxygen, feel rich and important, be to-day in imagination what you desire to be next year, and you will reach your goal in reality, if you walk in the middle of the road and step along vigorously and with courage.

Preach good and you can reach good. There's always trade enough in sight for the man whose voice is heard in the land and his trade arm will go out as far as his voice will carry conviction.

In salesmanship use pleasant names for disagreeable things—avoid words that are disfigured by the "bar sinister" of tainted association. Never "cut" a price, but make a "special." Do not "knock" a competitor's goods, merely "comment" upon them. Do not "instruct" a salesman, just "suggest" the point—for an ill-smelling flower does take on a sweeter odor with another name—by the law of mental concepts.

Strike often and strike hard, but use a musical hammer—in salesmanship or advertising. There's much in the force of it, but more in the harmony of it after all. Discordant sounds irritate the nerve centers of inclination and drive away the expectant and disappointed audience.

Be square with your trade and you can bid defiance to the attacks of the cavalry of competition. It may drive at you and seek to capture, but will meet defeat on the bristling points of your integrity.

Say what you mean, and say truly if you want to build a business of the kind which will weather the storms of opposition that are sure to come sooner or later.

If you do the same thing that everybody does in the same way you make small impression in the world of business. You must get a little originality and snap into your methods to secure more than passing notice. Be awkward, if you must, but make

AN ATTRACTIVE WINDOW DISPLAY MADE AT NOMINAL COST.

of which an endless variety of novel and beautiful designs may be exhibited in the show windows, and attention directed to an indefinite number of small articles in a manner that cannot escape the notice of the most indifferent passerby.

The designs are made of cardboard strips two and one-fourth inches wide. These strips may be had in various lengths. On the back of the strips are pasted colored crepe or plain paper, as desired.

These strips are intended to be used with a dark background, preferably black or very

maltese, Latin and Teutonic crosses, diamonds, squares, stars, etc., can be constructed, or they can be used as horizontal or vertical strips, as borders to shelves or in countless ways that will, as already intimated, suggest themselves to the ingenious and tasteful window dresser.

The two windows illustrated herewith were fully dressed, as shown, at a total expense of \$3.

Mrs. E. E. Roberts, Falls City, Nebr., intends to sell out.

the gong sound loud enough to make heads turn in your direction.

I think the best diplomacy is the kind that comes out in the open and says: "Here are the goods, look at them. This is the price, hear it." All revealed, nothing concealed, and "the d—l take the hindmost"

[THE END.]

Side Lines For Jewelers.

(By N. NIELSON, Harlan, Ia., Vice-President Iowa Retail Jewelers' Association, before the latter's recent convention in Des Moines, Ia.)

IN taking up this subject I will say that this paper will treat the question of side lines mainly from the country jeweler's point of view. My experience has been chiefly in conducting a business of my own in an Iowa town of medium size, and consequently I will naturally look at it in the light of what my experience has taught me in the years I have been doing business and built up my trade. Experience is the best teacher, they say, and, if such is the case, I shall try to give a short description of what I have found out in regard to side lines I have handled.

If my little sketch should not happen to apply to our brother city jeweler, I hope he will excuse me for taking up a few minutes of valuable time. Conditions for handling side lines are entirely different in the city from what they are in the smaller towns, and the rules that apply to one do not always apply to the other. From personal observation I have come to the conclusion that side lines are not handled as extensively by the city jeweler, and in trying to reason out why such is the case I decided that there were good reasons, at least, from the outsider's point of view. One of the main reasons, without question, is that it takes a city to furnish sufficient trade to support the exclusive one-line stores in certain lines of goods or lines that can be handled with advantage in a jewelry store. In a city large enough to justify the one line stores, they will do the business and prosper, if the right man is back of it.

In the smaller towns, the same conditions do not prevail. Lines of goods that are sold in the city in an exclusively one-line store and sold in quantities to make money could not possibly be marketed that way in smaller towns on account of the limited demand for those certain lines, and here is where the jeweler comes in. He can market those lines with better success than any other merchant.

In giving my views and experiences on this subject I will assume that I am talking to jewelers who are not now handling side lines, but who may possibly do so soon. I take this way of going at it for the reason that the man with the side lines may not need any information in regard to this subject; in fact, he may have had a great deal more experience than I have, and we will admit that experience certainly is the best teacher even if it is a little costly sometimes. We will assume that you have built up your trade in the regular jewelry line.

In looking around the store you find

that by changing the arrangement of your goods you have some extra space. This extra space will hold either more goods in the regular line, or you can add a side line. Now, which will it be—which will bring the best profit? These are the questions to answer. If you asked me these questions, I would answer this way, provided you are now carrying enough stock so that an addition would only benefit your trade slightly and your trade being established on a good paying basis in the jewelry, you can add a side line and make it pay you a fair profit, which will practically be extra and at the end of the year will show you as the gainer, provided you do not neglect your regular line.

Now, having established the fact in your mind that you will add a side line because you have the extra space to display it, and also that if properly managed it will pay

try. First of all, I will mention cut glass and china, the hand-painted kind of china. You may say that they are not side lines any more because they are now sold by almost every jeweler in the country, but I mention these lines particularly for the reason that there are jewelers that do not handle either line yet, and in a case of this kind, these lines most assuredly ought to be the first consideration, for we have no other lines that will show up to better advantage in a jewelry store than these and consequently they will sell better in a jewelry store than in any other store.

The following lines are all good money-makers if properly displayed, advertised as they should be, and handled with intelligence: Cameras, and supplies for same, photographs, small stringed instruments, sewing machines, stationery. I consider these the main and leading lines for

ANOTHER NEAT DISPLAY WELL CALCULATED TO ATTRACT ATTENTION.

you a profit, then the questions will be what lines are suitable for jewelers, which line will be the most profitable, the best seller; numerous other questions will also come up in your mind. For profits and also for sales I would decide on a line that would give the least competition, for one may overdo a thing. Therefore leave alone lines that are already well represented in your city, select the line that will give you the least competition and at the same time give you promise of good demand, good interest on money invested and a line that will display well and not detract from the appearance of your store.

I consider the following lines splendid for jewelers, every one of which has been sold with great success all over the coun-

jewelers and will take them up one by one later on. The following I do not consider of as much importance, but they are nevertheless profit-bringers, and in some localities good sellers: Electric portable lamps, oil lamps, statuary in different grades. The electric portables and lamps are usually good sellers and will bring a fair interest on money invested, but I would advise touching statuary but lightly. Lamps of all kinds are always more or less in demand, and it is well to bear in mind that any line that has a continuous demand is usually a profit-maker in any locality.

(To be continued.)

[Answers are also solicited from our readers to the questions published on this page.]

QUESTION No. 1603.—Cement for Glass.

—One of my customers brought in a glass water pitcher which was broken by a fall. I have tried all kinds of glass and china cement; then I let it set for 10 or 12 hours; next I filled it with water. In a short time however, it broke apart. Please tell me what I should use in this case. B. & S.

ANSWER:—It is always well not to expose broken glass which has been mended by cement to hot or boiling water, as this will sometimes crack a perfectly sound glass vessel. The best cement is prepared as follows: Soak two drachms of cut isinglass in two ounces of water for 24 hours; boil down to one ounce, add one ounce of spirits of wine and strain through linen. Mix this while hot with a solution of one drachm of mastic in one ounce of rectified spirits, and triturate thoroughly with one-half a drachm of powdered gum ammoniac.

QUESTION No. 1604.—Blanching Process for Silver Articles.—Please describe to me what the blanching process is. I understand it is extensively used by silver manufacturers in Europe. B. P. S.

ANSWER:—The *Metal Arbeiter*, Vienna, recently described the blanching process as follows: "If the silver were absolutely pure, it would not be changed even by red heat, as the silver has no tendency to oxidize. But since, on account of its softness, it is always alloyed with copper, a film of copper oxide appears when it is heated. If the silver thus coated is now heated in dilute sulphuric acid, the copper oxide is dissolved and the pure metal is brought out. This method is also used for bringing more silver to the surface of silverware, and giving it a purer white color. The article is brought to red heat in the air, whereby the copper of the surface is burned to copper oxide, through the action of sulphuric acid. The surface will be left with more silver than the rest of the alloy."

QUESTION No. 1605.—To Drill Glass.—How can I drill holes through glass? D. R.

ANSWER:—Make a solution of one ounce gum camphor, one and a half ounces spirits of turpentine and three drachms of ether. Keep the end of the drill tool wet with this fluid. The sharp corner of a freshly broken point of a file is one of the best drilling tools for this purpose.

QUESTION No. 1606.—Hard and Soft Soldering.—Please tell me if hard soldering may be done as easily as soft soldering? A. J. Q.

ANSWER:—There is little difference in the common acceptance of the terms; hard soldering requires that the parts to be soldered be submitted to red heat, while soft soldering may be done at a heat which is generated by a common alcohol lamp without the assistance of charcoal heat. Various

compounds of soft metals, such as Britannia metal, for instance, may be soldered by a special process, which is neither hard nor soft soldering, but to solder jewelry by such or a similar process is out of the question.

QUESTION No. 1607.—Magnifying Glass for Igniting.—Will you kindly tell me if you can smelt glass or make metal red hot through a large magnifying glass; if so, what size would be necessary and where can I get one? S. M. C.

ANSWER:—No magnifying glass can produce a degree of heat as intense as that of which you speak.

QUESTION No. 1608.—Renovating Bronze and Gilt Pieces.—In our jewelry store we always have some pieces that need renovating, such as gilt statues, gilded clocks and also bronze articles. We would thank you for a few formulas for renovating the above line of ware. B. B. & G.

ANSWER:—(1) For gilt work, first remove all grease, dust, wax, etc., with a solution of potassium or sodium hydrate; then dry and with a soft cloth apply the following: Sodium carbonate, seven parts; Spanish whiting, 15 parts; alcohol, 50 parts; water, 125 parts. Go over every part carefully, using a brush to get into the minute crevices. When this dries on, brush off with a fine linen cloth or a good chamois skin. (2) Remove grease, etc., as directed above, dry and go over the spots where the gilt surface is discolored with a pencil dipped in a solution of two parts of alum and 250 parts of water, carrying 65 parts of nitric acid. As soon as the gilding reappears or the surface becomes bright wash off, and dry in the direct sunlight. (3) Still another cleaner is made of nitric acid, 30 parts; aluminum sulphate, four parts; distilled or rain water, 125 parts. Clean off grease, etc., as above, and apply the solution with a camel's hair pencil; rinse off and dry in sawdust. Finally, some articles are best cleaned by immersion in hot soap suds and rubbing with a soft brush. Rinse in clear hot water, using a soft brush to get residual suds out of crevices, let dry, then finish by rubbing the gilt spots or places with a soft linen cloth, or a bit of chamois. There are some bronzes gilt with imitation gold and varnished. Where the gold is well done and the gilding has not been on too long, the most practical eye will sometimes be deceived. The deception, however, may easily be detected by touching a spot on the gilt surface with a glass rod dipped in a solution of corrosive sublimate. If the gilding is true no discoloration will occur, but if false a brown spot will make its appearance.

Mode of Preparing Silver for the Application of Red Enamel.

TORONTO, Ont., July 3, 1906.

Editor THE JEWELERS' CIRCULAR—WEEKLY:

We are very successful with the metal enameling, but so far are not satisfied with our silver goods. It may be that we have not yet found a good pigeon-blood red, or ruby red. Ours is a faded red, or a little brown. A. H. W.

ANSWER:—The difficulty of getting a good red on silver is explained, not by the fact that a good silver red is hard to find, but rather by the fact that few people know how to prepare silver for enameling. The oxides of metals color enamel. Silver oxide colors enamel yellow, and one form of silver will make enamel opaque. So, in order to get the best results, the silver must be perfectly clean.

The usual method of preparing a silver article is by boiling it in a sulphuric pickle. In enameling an article treated in this manner the red will be a semi-opaque brown. We have three remedies for overcoming this. One is to "bright cut" or "wriggle" with a flat graver the surface to be enameled. Remove all of the pickle coating, dissolve the engravers' cement in alcohol, or, still better, don't use any at all. Then carefully heat the article until it turns a straw color when cool. Most any red enamel will answer, one of purple cast being preferable.

Another way to prepare silver is by stripping. This can be accomplished by different methods—by using the silver as an anode in a silver plating solution, or by dipping it in a solution of 1 part of distilled water and 2 parts of chemically pure nitric acid. In either case the article should be kept in motion while in the solutions, rinsed occasionally in clean water and scratch-brushed either in the regular way or with a stiff bristle hand brush with sand and water. The acid solution will rot German silver joints and catches.

The best method is to start with sterling or coin silver that you know is composed of pure copper and silver. Don't pickle the silver or, if it has already been pickled, scrape or file the side to be enameled; work it into shape and, after soldering and annealing have been completed, place the article in a cold nitric acid pickle, using C. P. nitric acid. Brush well with a stiff bristle brush, using sand and water, after which dip in the nitric acid stripping solution; clean again and heat until the straw color appears. A piece of silver is properly prepared for red enamel when, after having been heated red-hot, it will turn black when cold.

Oxide of silver colors enamel yellow, and hence, if in firing a silver piece a slow heat is used, the surface under the ground enamel will have a chance to oxidize and the result will be brown—the combination of red and yellow. Or, if there are a number of colors on a piece of silver work which necessitates several firings, the red is liable to be brown. In order to get a "purple cast" red, have the silver so clean that it will color like polished steel when heated. Anneal it to a straw color. Fire in a hot muffle or at a quick heat and do not fire the red any more than is necessary.

THE CONNOISSEUR

Devoted to Art Pottery, China, Marbles, Bronzes, Cut and Decorated Glass Ware, Bric-à-Brac, Lamps, Art Metal Wares, Fancy Goods and Kindred Lines.

An Interesting Exhibition of Doulton Pottery at London, England.

DOULTON & CO. recently gave an exhibition of new effects in pottery in the New Dudley Gallery, London, and the visitors found much to admire among the 600 pieces from the works at Lambeth and Burslem. As the company sends a considerable part of its output to New York, there will be interest in its new lines, regarding which the *Pottery Gazette* says:

"Speaking generally, the work from Lambeth is on a stoneware basis and that from Burslem on earthen ware and china. Very different methods are employed at the two studios, and as the bodies of the wares manipulated are diverse, the effects produced are as dissimilar as possible. But we are introduced to new effects in both.

"The development in the artistic ornamentation of the two classes of ware is very marked. Chemical investigation has enabled the Lambeth artists to produce brighter schemes of color than could the old stone ware workers. The evolution of what is now called 'Lambeth Faience' has been interesting and rapid. Though the firm of Doulton was founded in the early years of the 19th century, no definite attempts to produce anything artistic were made until 1867 and 1871, when small collections of very simply treated salt-glazed vases were shown at exhibitions in those years. These were so favorably received that Henry Doulton (afterwards Sir Henry), the then head of the firm, was induced to found an art section of the works. In this he was assisted by J. C. L. Sparks, master of the Lambeth School of Art and a staff of artists, with George Tinworth as modeler.

"There was no tradition of art to follow at Lambeth. The methods of work had to be invented; clays and colors had to be found and tested, and special kilns had to be constructed to suit the new work. So that 35 years before the committee of the Technical Education Board, of London, denounced our pottery manufacturers as being ignorant of chemistry, a manufacturer at Lambeth had invented (and has since perfected) the salt-glaze decoration of pottery as the result of his chemical research. The new effects in salt-glaze ornamental ware are represented by the fine group of vases, etc. The examples exhibited of the artistic treatment of Lambeth stone ware are creditable to the chemist and the art potter.

"The exhibits supplied by the Burslem artists show the greater possibilities in artistic decoration on a white body, and they illustrate very emphatically the perfection attained in the treatment of the *rouge flambe*, and crystalline glazes. The first of

these exhibits striking and novel results of great beauty. The long sustained efforts to rediscover the secrets of the old Chinese *flambe* have been rewarded by a close approximation to the original results if the methods of securing it have been different. But it is believed that the method now employed is identical with that of the old Chinese. Still, its rediscovery entitles it to be described as a new effect.

"The coloring oxide is copper, which under different conditions of firing produces very different results, the hues varying from blood-red to blue. This blood-red—one of the most marvelous colors ever applied to pottery—was seen to great advantage on a beautiful flower pot. It is a charming rich decoration, with a landscape introduced in subdued tones. An interesting exhibit at the end of one of the sections was a group of vases and useful articles, with silver and copper mounts, by 'The Potteries Cripples' Guild,' of which the Duchess of Sutherland is patroness.

"One of the most interesting of the new effects shown is two crystalline glazes. These are new only in their developed form, for crystallization was produced—though unintentionally—long ago. Then it was due to accidental, defective glazing; now it is the intended result of perfect glazes; so that what was once only an occasional effect is now the intended result of well-considered design. But even now there is a limit to the certainty of result, because these glazes change color capriciously if, in the process of firing, they are subjected to different temperatures. It is thus evident that, although, with the scientific care now bestowed on firing, intended results may generally be secured, 'new effects'—and probably beautiful ones—are likely to be sprung upon the manufacturers at any time.

"A particularly fine specimen of crystalline is the almost globular vase, the glaze on which is broken up into regular fine lines from the top toward the base, which appear to follow the natural flow of the melted glaze. In this piece the fine glazed lines are so uniform as to suggest that they may have been applied by the pencil of the artist. We may, however, be sure that if Messrs. Doulton could repeat this disposition of the crystalline glaze they would do so. As it is, the effect on this piece is unique. A duplicate of this form may be treated with a very similar crystalline ornamentation, but the process of production precludes the possibility of any two pieces being identical. A number of artistically painted china vases show the versatility of the Burslem painters; flowers and figure subjects were presented in great and charming variety."

Recent Reappraisements of White and Decorated China.

THE following reappraisements of decorated china and similar lines were announced recently by the Board of United States General Appraisers, New York:

Decorated china from Chieppe & Barbarin, and Gustav Balleroy, Limoges, exported Sept. 2, 1905, to Feb. 24, 1906, entered at New York (File Nos. 33568 and 39094/95); findings of Board No. 2: Prices as published in reappraisal No. 6940, May 2, 1906, and No. 6939, May 2, 1906. Reappraised value affirmed.

White and decorated china from Porzellanfabrik Schonwald, Sonnerberg, exported April 10, 1906, entered at Newport News (File No. 39796); findings of Waite, G. A.: Tassen, 6012, white, entered at 12, advanced to 15 marks per gross; do., 6011, entered at 1080 marks per gross, advanced to 12 marks per gross. Discount, 5 per cent. Add 10 per cent. From Porzellanfabrik Mischendorf: Tassen, 1066, decorated, entered at 1.85, advanced to 2.05 marks per dozen; do., 1065, entered at 2, advanced to 2.25 marks per dozen. Discount, 8 and 2 per cent. Further advanced by addition of 10 per cent. verbandsauslag. Add cases, etc., on all.

Decorated china from Insam & Prinoth, Nurnberg, exported Feb. 2 and March 17, 1905, entered at New York (File Nos. 39178 and 39580); findings of Waite, G. A.: Figures, 3475, 3549, 1920, 3474 and 3588, entered at 4.75, advanced to 5.75 marks per gross. Add cases and packing.

Decorated china from Altrohl, Porz. Fabriken, mark 1724, Bodenbach, exported Jan. 9, 1906, entered at New York (File No. 38386); findings of Waite, G. A.: Plates, 2149-3, entered at 3.20, reappraised at 3.93 crowns per dozen. To entered value add 10 per cent. Discount, 2 per cent. Reappraised value is net. Add cases.

Decorated china from Gebr. Benedict, mark 7067, Bodenbach, exported Sept. 18, 1905, to Nov. 18, 1905, entered at New York (File No. 36929, 37062, 37233, 37512, 37556 and 37886); findings of Waite, G. A.: Dinner sets, 100 pieces, 853, entered at 19.32, advanced to 21.32 crowns per set; do., 851, entered at 21.57, advanced to 22.57 crowns per set; vases, 864, entered at 3.25, advanced to 3.75 crowns each; do., 863, entered at 2.60, advanced to 3 crowns each; do., 862, entered at 2, advanced to 2.30 crowns each; plates, 854, entered at 2.45, advanced to 2.75 crowns per dozen; do., 854-2, entered at 3.35, advanced to 3.80 crowns per dozen. And similar goods. Discount, 2 per cent. Add cases.

Decorated china from Ludwig Engel & Son, mark 7129, Bodenbach, exported Sept. 28, 1905, entered at New York (File No. 36905); findings of Waite, G. A.: Dinner sets, 102 pieces, 3835 and 6547/51, entered at 27.90, advanced to 30.40 crowns each. Discount, 2 per cent. Add cases.

Decorated china from Pfeiffer & Lowenstein, mark 7581, exported from Bodenbach, March 16 to April 6, 1906, entered at New York (File Nos. 39469 and 39793); findings of Waite, G. A.: Dinner sets, 100 pieces, 216/2386, entered at 33.29 crowns per set; do., 4260, entered at 36.75 crowns per set. Discount, 9.1 per cent. and 3 per cent. Add 10 per cent. Add cases. No advance.

Decorated china from Retsch & Co., mark 1666, Wunsiedel, exported Feb. 23 to March 29, 1906, entered at New York (File Nos. 39336, 39470 and 39638); findings of Waite, G. A.: Salads, 3549, entered at 2.75, advanced to 3.25 marks per dozen. Add 10 per cent. Less 7 per cent. Add cases.

CONTRACTS.

(Continued from issue of June 13.)

CONTRACTS BY MAIL, TELEGRAPH, TELEPHONE.

EVERY contract includes an offer and an acceptance.

An offer of proposal for a contract may be made in person, by agent, by telegraph, or by letter, and an assent to it or an acceptance of it may be given in the same manner.

If the proposition is made by letter, and sent by mail, the person making the offer may retract by a subsequent letter which reaches the offeree at any time before an answer of acceptance has been written and sent in the mail.

Example: A in Detroit mails a letter on Monday to B in New York offering to sell him 500 dozen eggs at eight cents a dozen. His letter reaches B Saturday noon. Saturday morning A writes a letter to B withdrawing his offer, which letter reaches B Monday morning, while he is in the act of writing a letter accepting the offer. It is too late for him to mail the letter and therefore he accepts it.

As soon as an acceptance is put into the mail the contract is closed as to both parties.

Example: On Friday, A in Detroit writes a letter to B in New York, offering him 500 dozen eggs at eight cents a dozen. The letter reaches B Saturday noon. Saturday afternoon at 3 o'clock B writes a letter accepting the offer and deposits it in the mail box provided by the postoffice authorities, at the street corner. On the 4 o'clock delivery B receives a letter from A withdrawing his offer. A's withdrawal is too late; the contract was closed at 3 o'clock.

An acceptance by letter takes effect from the time when it is mailed and not from the time of its receipt by the party making the offer.

A retraction, however, takes effect when the letter of retraction is received and not at the time of mailing it.

The law as to the making of contracts by letter, telegraph, etc., grew out of the practice in early days of transmitting communications by private agencies. In an early case it was decided that a sale was complete when the letter of acceptance was mailed in response to a mailed letter containing the offer, the court merely deciding that, by sending the offer through the mail, the offerer made the mail his agent for the receipt of his acceptance.

The theory is, therefore, that where a man making an offer uses the United States mails for the purpose of transmitting his offer he makes the Postoffice Department his agent, and an acceptance delivered to an agent is the same as if delivered to the principal. It is on this theory that a contract is complete when the acceptance is delivered to the postoffice for transmission; while a retraction is not complete until it is delivered to the person to whom it is addressed, the mail not being the agent of the acceptor, but the agent of the offerer, that being the means he has chosen by which to communicate his offer.

The fact that the post has become a public agency and not a private agency, as formerly, does not prohibit the application of

the theory; one may make a public agency his own agent as much as he can make a private individual his agent.

So one may be bound when he really does not know that he is bound, as one does not usually know the moment when an acceptance is put into the mails.

If a proposition and its retraction reach the person to whom they are sent at the same instant of time, the question arises as to the result of an acceptance. It has been held that if the offer was opened and an acceptance posted before the letter of retraction is opened and read, the contract is binding. If the letter containing the offer is opened and read and afterward the letter of retraction is read, and then a letter accepting is posted, it is not a contract. The person must have had no actual notice of the retraction at the time when he mails his acceptance in order that the contract may be complete.

If A should send by mail an offer of goods at a certain price, and 10 hours later to ensure a sale send a second offer of the same goods for less money, and B mails an acceptance of the first offer before he receives the second offer, he cannot avoid his first acceptance by writing an acceptance of second offer and putting it in the mails, stating therein that he avoids his first acceptance. If on receipt of the first offer he mails his acceptance and two hours later receives the second offer of a lower price and then telegraphs his acceptance of the second offer, disaffirming the first, he is still bound to the first acceptance. A contract once made is irrevocable except by the agreement of both parties. The moment the letter accepting the first offer was posted the contract was complete, even although the acceptance never reached the offerer. Nearly all questions of validity of contracts by mail and telegraph may be answered by bearing in mind that the contract is complete the moment the letter accepting the offer is posted.

It must be borne in mind that the posting of the letter of acceptance, or the sending of the telegram, must be such a posting or sending as puts the communication practically out of the control of the sender; for instance, if the acceptor writes his letter of acceptance and places it in his own private letter box, to be called for by his own private messenger at a certain time in the day and taken by him to the postoffice, it is not posted within the meaning of the law. Or, if the acceptor gives the letter to a messenger, other than a postman or accredited agent of the Postoffice Department, he has not thereby made the acceptance complete until his messenger has placed the letter in the postoffice box, or the postoffice, or delivered it to an accredited agent of the postoffice authorities, so that if one writes a letter of acceptance and gives it to a private messenger to be taken to the postoffice and a telegram is received withdrawing the offer while the messenger is en route to the postoffice, even although he may be at the very door of the office, the retraction of the offer is sufficient.

(To be continued.)

A fire caused by lightning occurred in the store of Privett & Co., Winston-Salem, N. C., June 24, and did considerable damage.

FINE SPECIMENS OF
DOMESTIC ART GLASS.

IN the sample rooms of the new Tivoli Art Glass Co., 87 Maiden Lane, New York, are a large number of specimens of the work that is now being done in the factory at Maspeth, L. I. The vases, made of glass, in the prismatic colors, are certainly attractive. The decorative patterns are produced at the time when the glass is blown. The specimens that are shown indicate that the process includes layer work and the clever use of acids. Every object comes from the works with a distinctive character, especially as to the ornamental design. Some of the vases come in antique effects, others are radiant with iridescent hues. Several are shown which give the idea of a porcelain body, although they are entirely of glass. The shapes show as much variety as the patterns, ranging from the ordinary forms to those that are eccentric and of the school of art nouveau. Altogether the line is decidedly attractive.

NOVELTIES IN
VIENNA FAIENCE.

VIENNA Faience in a wide range of shapes and coloring is displayed among the various new lines in the salesrooms of Schwartz Bros. & Co., 39 Union Sq., New York. The articles are adapted for photograph holders, flower vases, card trays and mantel ornaments. Painted glass panels add to the pleasing effect of many of the pieces, especially those of the larger sizes. Figures of various kinds are modeled; one specimen has two little Dutch girls looking into a bowl, apparently to see their shadow in the water. The bowl may be used as a receptacle for flowers. Many other pleasing conceits make this collection a tempting one for buyers.

THE RAMBLER.

Patrolman Anderson, of the Worcester (Mass.) police force, found in a freight yard one night recently a box containing solid silverware bearing the stamp of the Goodell Silver Co., Concord, N. H. The contents are estimated at \$525 in value. Anderson was going about the yard on his usual round when he found the box with the cover ripped half off. He investigated and found heavy, solid silver knives, forks and other table ware. He reported the matter to the station, and the box was conveyed there. From the appearance of the case and of the surrounding circumstances the police believe that the box was on its way to Woonsocket, R. I.; that the freight car holding it was broken open, and that the thieves carried away as much of the silverware as they could take in their pockets and their hands.

The REPAIRING

END OF YOUR BUSINESS IS THE
MOST IMPORTANT PART OF IT

More people come into your store to leave work than to purchase goods.

Almost every one of your good customers became so through your repair department.

Progressive jewelers know this and concentrate their efforts on the repair department of their business. They give it the most prominent place in their stores; they emphasize it in all their advertisements; they keep themselves and their employes thoroughly informed on the costs of all kinds of work, new ideas and methods; they are courteous and accommodating to repair customers; have all work ready when promised; and do only such work at home as they can do well.

They send all the rest to us.

We devote our entire time, energy, capital, and twenty-five years' experience to this important branch of the jewelry business; employ and educate the best help that can be obtained; systematize and inspect the work, and use every modern method to produce the best work promptly at reasonable prices.

It is to your interest to do business with us, it is to our interest to have you.

Let us work together.

Watch Case Satisfaction

THE MOST POPULAR CASES on the market, no doubt, are the 25-year lines. They fall within the class of "high grade" cases, which satisfy self-respecting men. Twenty-five years seems a reasonable time.

The Wadsworth "Pilot" (25-year) Watch Case

"A Quarter of a Century"

WE INVITE COMPARISON between this line and other makes of 25-year cases—compare Shapes, Decorations, General Appearance, Prices, etc. Then use your own judgment and buy on business principles—on merit without prejudice.

192 Broadway, New York

"We never follow the Fashion, the Fashions Follow Us."

MAURICE L. POWERS.

JOSH W. MAYER.

ANNOUNCEMENT.

WE are now in a position to state that the greater part of our stock of new and effective goods that will be shown at our coming exhibition, to be held in our offices between August 13th and 18th, inclusive, is finished and by the 13th of August the display will be completed in its entirety.

We desire to impress forcibly upon the Jewelers throughout this country that it will well repay them to visit this wonderful display. We have very many reasons for this assertion, but one of our strongest is that where one of our representatives calls on you, you see but one stock, while at this exhibit you will find five stocks combined into one, including large pieces that are never shown or carried on the road. We would very much like to acquaint you with our entire line, so that in case any of your clientele desires anything out of the ordinary, or any important pieces, you will know where to write or telegraph for them.

The assortment at this exhibition will be tremendous and the prices will vary so that the very smallest and the very largest dealers will find the stock most attractive, from the simple every-day goods to the most extravagant.

Once a visit always a visit.

POWERS and MAYER,

Makers of Diamond Mounted Jewelry THAT SELLS.

Makers of the Original Secret Lock and Joint Bracelet

SOLD THROUGH THE WHOLESALE TRADE ONLY.

Three New Patterns

OUR SALESMEN are starting on their display trips, and are showing a very large number of new designs in Ladies' and Gentlemen's Card Cases, Photo Frames, Baskets, Jewel Cases and other Novelties, and *three new and original patterns in Toilet Sets and Manicure Articles.*

For over 45 years we have enjoyed the distinction of originating the handsomest and best selling patterns in our several lines, but in the present offerings we excel all our previous efforts. Our etched effects supersede anything on the market at present.

We can supply Combinations in Toilet and Manicure Sets, arranged in handsome silk-lined cases. These combinations are beyond anything ever shown in the past.

Determine now to see these new creations; it will pay you well, and an opportunity will be lost if you neglect it.

These entire lines will also be on exhibition at our New York Showrooms.

Appropriateness in Mountings

EXPERIENTIA
DOCET

GENUINELY artistic mountings call for expert judgment and skill. Every stone possesses some individual characteristic with which the mounting should harmonize. Thus added value may be imparted. Such appropriate mountings are a specialty here.

ARTIFICIAL
PEARLS.

EGYPTIAN PEARLS

MOUNTED
IN
POPULAR
JEWELRY.

THE PEARL has always symbolized Beauty and Value. Nature's product is most closely approximated in the handsome "EGYPTIAN" Pearls. The iridescence, weight and color of natural Pearls are retained; and inspection of the "EGYPTIAN" Pearls will demonstrate their pre-eminence. The results attained are possible only by a special process, supplemented by expert workmanship. The articles of Jewelry to which "EGYPTIAN" Pearls are applied are artistic creations meriting your attention.

Silver Statue Presented to the German Emperor.

ON the front cover of this issue appears the picture of a solid silver model of an officer of the Royal Dragoons in full dress uniform, mounted upon a charger, which was recently presented to the German Emperor on the occasion of his silver wedding. The statuette stands upon an ebonized pedestal, which does not appear on the cut. The pedestal has a silver plate on the front, engraved with the following inscription:

Presented to
Their Colonel in Chief,
His Imperial Majesty,
The German Emperor,
on the occasion of his Silver Wedding,
by
the Officers of the Royal Dragoons.
February 27, 1906.

There is a similar plate on the reverse, having the regimental crest engraved thereon.

The statuette was modeled and manufactured by the Goldsmiths & Silversmiths' Co., Ltd., of 112 Regent St., London W., silversmiths by appointment to King Edward, and in its absolute fidelity to the smallest detail of uniform, etc., reflects the greatest credit on the makers.

Reports Read at the Annual Meeting of the New Jaegersfontein Mining & Exploration Co.

THE annual meeting of the New Jaegersfontein Mining & Exploration Co., Ltd., was held in Kimberley, Cape Colony, with Col. D. Harris, the chairman, presiding. The chairman in his annual speech recalled that the profits for the financial year ending March 31, 1905, were £137,355, and the amount of blue earth on the floors was increased in that year 33,490 loads. In the year ending March 31, 1906, the net profits amounted to £137,293, and the amount of blue earth on the floors was increased 349,825 loads, making a total at the close of the fiscal year of 1,358,500 loads. The chairman emphasized the importance to a diamond mining company of having a sufficient quantity of blue earth on the floors to keep the machines continuously employed.

The total assets of the company amount to £1,309,976. The shareholders received in the last year £425,000, or £62,500 more than in the preceding year, and at the same time the assets were increased more than £10,000. The results were accomplished, said the chairman, by washing a quantity of blue 59,500 loads less than in the preceding year. This was a showing on which the chairman extended hearty congratulations to the shareholders.

The yield in 1906 was 10.89 carats from 100 loads of blue ground, an increase of two-fifths of a carat over the preceding year, when the total was 10.49. The chairman gave as a reason for the increase that the longer the blue ground is on the floor, weathering and pulverizing, the greater the prospects of an improved yield, and the amount of blue ground in the last year had been larger than in the year before, as already explained.

In relation to prices the chairman indicated that the company is getting constantly higher figures for the product. He said:

Another most important matter to which I wish to refer is the price of diamonds. In 1905 our diamonds realized, speaking in round numbers, an average of 61s. 6d. per carat. During our last fiscal year they realized 63s. 4d. per carat. The increase was in consequence of the higher price which we obtained during the first three months of the present year. We are now receiving 70s. per carat for our output, which the syndicate has again purchased for the whole of the year.

It is hardly necessary to point out that the increased price will have an important bearing on our profits. It is very satisfactory, from a point of view from those who are largely interested in diamond mining, that the demand for diamonds in the last 10 years has so enormously increased. The world is getting richer as the population increases. Ladies are just as fond of diamonds today as they were 30 years ago, and the rich men who can afford to gratify their desires in this respect are more numerous than they were at the commencement of the last decade.

I feel confident, therefore, that the present price of diamonds will be well maintained, provided the large producers accurately gauge the world's demand, and feed the market steadily and judiciously.

The police of East St. Louis, Ill., have been asked to find Gustave Hoffman, 56 years old, who recently disappeared from his home, 1314 Illinois Ave. Mr. Hoffman was a jeweler and did a small business in East St. Louis. The missing jeweler is five feet six inches tall, and weighs 145 pounds. When last seen he wore a black suit, fedora hat and a blue and black tie.

Report on a Uniform Carat Weight Made to the Association of German Jewelers, Goldsmiths and Silversmiths.

RESPECTING the metric carat for precious stones, Privy Councillor Prof. W. Foerster writes as follows to the Association of German Jewelers, Gold and Silversmiths:

"In reply to their letter of April 19, I beg to notify the Association of German Jewelers, etc., etc., of the following facts after having been again in correspondence with the International Institute of Measures and Weights at Sèvres, near Paris, regarding the present stage of the endeavors to arrive at an understanding in this matter. By virtue of the information received, I am in a position to advise you that there is absolutely no chance of any of the countries, which have been using the metric system, legally adopting a carat weight which does not correspond to the weights admitted as standards according to the principles of the metric system. On the other hand, it is reported that a steadily increasing inclination is shown by those interested in the various countries to adopt, in lieu of the various units of the carat obtaining in the different places, an international carat, the unit of which represents a sort of mean value of the various carats, still in force at the present day, and amounts to exactly 200 milligrammes. In the International Weights and Measure Service the opinion prevails that all facilities admissible according to the tried principle of the unification of weights and measures should be granted for the denomination of such a carat. The subdivisions, according to the duodecimal system (by continued halving) heretofore in use (*i. e.*, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$, $\frac{1}{32}$, $\frac{1}{64}$), will, of course, have to be dropped in connection with the international carat, since only legally admissible subdivisions of 200 milligrammes can be considered, viz., 100, 50, 25, 10, 5, 2, 1 milligrammes, or $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{10}$, $\frac{1}{20}$, $\frac{1}{40}$, $\frac{1}{100}$, $\frac{1}{200}$ in units of the carat, which is still far more serviceable for the immediate footing-up and computation of the weighings in carat-units than the obsolete duodecimal series, to which one could, by the way, conveniently revert during the transition periods by means of conversion tables.

"Summing up, I declare, as chairman of the International Weights and Measures Committee, that everywhere great desire is shown for an international regulation of the carat-weight question, while, with all experts of the weights and measures system, the unanimous conviction prevails that a retention of the carat units used by the various countries, as conflicting with the practical unification and simplification of the common weighing system, should be combated with all legal means at disposal."

Plans for the new building to be erected by Frederick R. Coats for the manufacture of jewelers' tools, on the southwest corner of 11th and Laurel Sts., Harvard Park, Springfield, Ill., are about completed and work will be begun at once. The building will be three stories high, 150 feet in length, and the center part 42 feet square. It will have a floor capacity of 16,200 square feet.

The Hotchkiss Jewelry Co. has moved from Brownsville, Tenn., to Water Valley, Miss. The firm style will shortly be changed to the Hotchkiss-Parsons Jewelry Co. H. C. Parsons, formerly manager for A. K. Jobe, Water Valley, will have charge of the watch department. Mr. Hotchkiss, who is an optician, will give his personal attention to the optical department.

PUSH BALL.

In the game of push ball you must have pushing ability and strength to push the ball at the right time in order to win. This is just exactly our idea of increasing our business, for we are pushing it by having more new and original ideas in all lines for Fall Trade than in all of the 40 years of our existence.

Our travelers can prove this assertion if you will but give them the chance.

LARTER & SONS,
21-23 Maiden Lane, NEW YORK.

Jewelers' League Allowed to Interplead in Order to Settle Question of Rival Claims.

In the Supreme Court, Special Term, Part I., New York, Justice Blanchard granted a motion last week, allowing an interpleader in the case of the Jewelers' League of New York against Frank Denton, in which there are rival claimants for the money to be paid out on a member's insurance policy.

The court enjoined Denton and other claimants from suing the league.

Edgar Gray, who was a member of the league, died Jan. 16 of this year. He had transferred his membership certificate to Frank Denton, who now claims the benefit money. The league maintains that benefit money is to be paid only to relatives of the deceased members, with one exception. The league pays to a creditor who has actually advanced money on the certificate, and then only repays the advances, the balance of the money going to the family.

Margarita Gray, widow of the deceased, and his children filed a claim to the benefit insurance. Mr. Denton also brought suit against the league in Orange County, New York, asking for the entire amount of the policy. The league then asked for an injunction against all the claimants, and offered to deposit an amount equivalent to the benefit money either with the court or with a trust company, until it was decided to whom the money belongs.

The hearing took place before Justice Blanchard, who decided to enjoin all the claimants from bringing suits against the league. The money was deposited in court until the claims will be passed upon as a result of the interpleader action.

Geo. W. T. Case, New Bedford, Mass., about a week ago handed over to the police a letter which he received signed "Black Hand Branch," and making all kinds of dire threats unless he placed \$1,000 worth of diamonds under a tree in the high school yard. Mr. Case declares that he regards the threat as a joke. The police suspect a crank wrote the letter.

Dr. George F. Kunz's Report.

Production of Precious Stones in 1905 Published by the United States Geological Survey.

WASHINGTON, D. C., July 12.—The annual report on the production of precious stones in 1904, prepared for the Geological Survey by Dr. George F. Kunz, the gem expert, has been published and, as usual, contains a vast amount of valuable information. Through the courtesy of the Geological Survey, THE CIRCULAR-WEEKLY is enabled to present the report in full.

INTRODUCTION.

The year 1905 made a record for the importation of precious stones of every variety. This importation was attended by prosperity in every branch of the jewelry business, the sales ranging from the richest gems to those of the poorest qualities, and even to every known form of imitation. This record was achieved notwithstanding the Russo-Japanese war, and was due to general prosperity.

The discovery of uhlite, a green variscite, translucent, golden-green in color, and used as a gem and decorative stone, at a new locality 40 miles southwest from Salt Lake City, eight or nine miles west of Stockton, 20 miles northwest of Mercur, and 25 miles northwest of the other uhlite locality in Utah, promises to furnish a quantity of this peculiarly American stone that may be used in semibarbaric jewelry or where a rich but not precious stone is desired.

In the search for and the mining of tourmaline, beryl, topaz, kunzite and other stones peculiar to the southern counties of California, some wonderful crystals of rose-colored beryl implanted on feldspar and many fine crystals of tourmaline (red and green) are found, and in connection with these occur many specimens of great interest to the science of mineralogy. The region bids fair to excel that of the Ural Mountains, which for more than half a century has led the world in such products. So great has been the interest in California gems and their mining that the State mineralogist, the Hon. Lewis E. Aubury, requested the writer to prepare an illustrated report on the finding, the history, and the cutting of the precious stones of California, with a description of its mines. This volume, numbering 150 pages, illustrated with many plates, is now being issued by the California Bureau of Mines in San Francisco.

In the State of Maine, during 1905, prospecting and slight working was done for gems at Mount Mica, Paris, Auburn, Newry, Mount Black, Rumford, and other mining localities. But only a few gems, tourmalines, were found, and their total value did not exceed a few thousand dollars.

The turquoise mines of New Mexico and Arizona have not been as productive as formerly, but those of California and Nevada have been more so.

Rose quartz from the Black Hills of South Dakota has been cut in great quantity in the form of beads, in Germany, and has been sold over the entire world in competition with rich green aventurine with its sparkling specks of mica.

Amethyst, topaz, malachite, lapis lazuli, amazon stone from Amelia County, Va., and a great variety of stones of all quaint colors have been in greater demand than in 1904. The topaz sold is generally the variety known as "Saxon" or "Spanish" topaz. It is in reality the result of the decolorization of the smoky quartz found in Spain, Brazil and Colorado, and according to the amount of unexpelled color, it is straw-colored, amber-yellow, or rich reddish-brown. So much demand has existed for the true Brazilian yellow topaz and the pink topaz, the latter produced by heating the Brazilian yellow, that the opening of the original mines at Ouro Preto in Brazil is under discussion.

A novelty in the gem line has been the cutting of the chrysoprase, so extensively found in Visalia, Tulare County, Cal., in its iron-brown and dark-brown matrix, which forms a pleasing contrast to the golden-green color of the chrysoprase.

Highly colored gems, green, red, yellow and purple, have been in great demand, so much so that many thousands of peridots of Arizona origin have been cut, and many times more of those from Egypt. This is equally true of the California tourmalines, pink and red, and also of those from the Urals and from Madagascar and Brazil. So great

has been the demand for amethyst that the remainder of the great finds in Brazil, in 1900, and also stones from every available source have been cut, frequently into pear-shaped and diamond-shaped stones.

The emerald is still the gem in evidence. At no time has it received so high appreciation as to price. It is more than ever in demand, for the supply has been only in part sustained by the yield of the mines in the United States of Colombia. Part of the gems have been cut in the United States from the rough stones shipped directly to the firms doing the cutting. Many of the finest gems were undoubtedly taken from old jewels by the owners on the inducement of the high prices obtained.

The pearl is in as great favor as ever. The English Government has published the results of the investigations of the experts who have studied the life history of the pearl oyster, its parasites, its enemies, and the methods of further increasing its production. The present demand is causing a drain upon the Ceylon pearl banks, which have always yielded so great a revenue.

Within the last two years, and with the introduction of Louis XV. and Louis XVI. designs in jewelry, there has been immense improvement in lapidary work in the United States in every variety of stone. No better lapidary work has ever been done at any period, and every intricate form of cutting and polishing such gems as aquamarines, tourmalines, peridots, kunzite, amethyst and similar stones has been employed, including not only the round but the oblong, hexagonal, octagonal marquise, pear-shaped, and other forms set with borders of small brilliants. There has been especial preference for many of the larger stones; and never have aquamarines, tourmalines and amethysts been sold in such profusion. Probably \$100,000 worth of aquamarines from the Brazilian locality found two years ago have been used.

DIAMOND.

UNITED STATES.

There are four regions where diamonds have been met with in the United States. These are (1) the Pacific coast, chiefly along the western base of the Sierra Nevada, in the central counties of California, associated with gold in the cement gravels; (2) along the line of the moraine of the ancient ice sheet in Wisconsin, Michigan, Indiana and Ohio; these have been transported from an undiscovered source, presumably somewhere in Canada; (3) Kentucky and Tennessee; (4) the Atlantic States from Virginia to Alabama, chiefly along the eastern base of the Appalachians in what is known as the Piedmont region. The actual place of origin of the diamonds is in all these cases unknown. Those of the Pacific coast and the Atlantic States have been derived by erosion from the adjacent mountain ranges, but the original sources have never been discovered. Those of the northern drift have doubtless come from beyond our borders, in Dominion territory, and their exact source is entirely a matter of speculation. The few occurrences in Tennessee and Kentucky are not as yet definitely traceable, even in theory. All have been found in loose and superficial deposits, and all accidentally. Most of those in the Atlantic and Pacific regions have been met with in washing for gold.

This subject of the occurrence of diamonds in the United States has been treated in some detail by the writer in a report to the United States Geological Survey, to be issued in the near future.

SEARCH FOR DIAMONDS IN BLACK SANDS OF THE UNITED STATES.

The high price of diamonds has made the search for these precious stones in the United States and Canada keener than ever before. In the examination by the United States Geological Survey of many samples of gold and platinum sands during the Lewis and Clark Exposition at Portland, Ore., diamonds were carefully looked for. Diamonds have been watched for also by a number of parties that have been dredging for gold on an extensive scale in the rivers of California, but in neither case have any finds been reported.

INDIANA.

Minerals of the Indiana Drift in Relation to Their Supposed Canadian Source.—The only well-attested diamond discoveries in the drift region of the United States during the last four years have been those in connection with the gold washings of Brown and Morgan counties, in southern central Indiana. The writer has taken special pains to obtain a full series of specimens of the rocks and minerals found in the gold-bearing drift of this region from George C. Royce, of Martinsburg, W. Va., and Prof. Blatchley, State geologist of Indiana, and others, for the purpose of having

them compared with the rocks in Canada, north of the Great Lakes, with a view to tracing out, if possible, the source whence the diamonds came.

With the hope of aiding in the solution of this problem the collections of drift minerals and rocks from the diamond section of Indiana were sent to Canada for examination and were laid before the Ottawa meeting of the Geological Society of America, in December, 1905. Considerable discussion was awakened, but no very definite results have as yet been reached.

Among those who examined the specimens at the meeting with particular interest and expressed opinions thereon are the following Canadian geologists: Dr. A. E. Barlow, W. J. Wilson, and Prof. H. M. Ami, of the geological survey of Canada; Prof. W. G. Miller, of the Ontario Bureau of Mines; Dr. G. A. Young, petrographer, and subsequently in more detail, Prof. Frank D. Adams, of McGill University, at Montreal. All these gentlemen were especially qualified to judge of these materials by intimate acquaintance with the geology of the region under consideration and its glacial phenomena.

Dr. Barlow and Mr. Wilson recognized a number of the fragments in the collection from the Indiana drift as apparently identical with rocks familiar to them at various points in northern Ontario. Especially marked was the prevalence of pieces and rolled pebbles of jasper and jaspilite, characteristic in association with the iron ores of the Michipicoten and other iron ranges north of Lake Superior.

After the meeting of the geological society the material, consisting of some 30 samples, was sent to Prof. F. D. Adams, of McGill University, for more detailed examination. In these 30 samples there were more than 200 specimens, every one of which was carefully examined by Prof. Adams, who then divided them into groups clearly definable. These groups and the percentages which they represent he states as follows:

1. Laurentian gneiss	14.4
2. Quartzite	29.8
3. Chert and jasper	32.7
4. Iron ore	9.6
5. Amphibolite and green schist	6.3
6. Trap, two types8
7. Sandstone, etc.	4.0
8. Limestone and shale	2.4
	100.0

No. 1 is represented by characteristic material, much of it evidently coarse pegmatite, rich in feldspar.

Nos. 3 and 4 are certainly, and Nos. 5 and 6 probably, from the iron ranges of the Huronian or Keewatin.

The pieces numbered 7 seem to be partly Keewatin and partly Huronian, while those included under 8 are distinctly Paleozoic.

It thus appears that the portions decidedly referable to the iron ranges of the Huronian and Keewatin (Nos. 3 to 6, inclusive) make up nearly half of the whole material (49.4 per cent.), while the quartzite, No. 2 (29.8 per cent.), is largely Huronian. These rocks are widely developed north of the Great Lakes and at no great distance from them.

KENTUCKY.

There has been some revival of speculation as to the existence of diamonds in the peridotite dikes of northeastern Kentucky. D. Draper, a Transvaal geologist, has visited the celebrated dike at Ison Creek, in Elliott County. The lessees or owners have under consideration a plan to work a large part of this tract with diamond machinery like that used at the South African mines, and apparently this entire tract of land has been bonded and the parties engaged are endeavoring to proceed to work the place extensively, although up to the present time no definite proof exists of the occurrence of diamonds in this region. The examination made there by the Kentucky Geological Survey, under the late Prof. John A. Procter and Dr. Crandall, and also that made by J. S. Diller and the writer 17 years ago, were both without result. Recently W. C. Phelen, of the United States Geological Survey, visited the region and spent some time in the preparation of an economic bulletin on the Kenova quadrangle. He located a new outcrop of the peridotite, but was unsuccessful in obtaining any diamonds. He heard at Grayson, Carter County, that a diamond or two had been found in the Ison Creek district, but he could not verify the report.

(To be continued.)

S. Stacy, Lake City, Minn., has removed to Minot, N. Dak.

HAYDEN W. WHEELER & CO.

MOUNTED DIAMONDS

We are making up many new pieces in mounted diamonds for our Fall stock and will show new ideas and a larger and finer stock than ever.

Besides mounted diamonds, we have a large stock of loose diamonds, colored stones and pearls.

Two Young Men Arrested in Pittsburg Taken to Kansas City to Answer Charge of Robbing Jewelry Store.

PITTSBURG, Pa., July 12.—Detective James Orford, of Kansas City, arrived in Pittsburg this morning and took back with him to Missouri Frederick Decker and Hugo H. Roman, two men arrested here and now charged with robbing the jewelry store of Grim & Smith, on the night of July 4. The booty, most of which was recovered, and which is valued at \$5,000, was also taken along. The prisoners, who were arrested in this city Monday afternoon, as told in the last issue of THE CIRCULAR-WEEKLY, did not know whose store they had robbed until Detective Orford arrived here and informed them. As both made a confession they did

employed as a bank clerk in Brooklyn, giving the name of the Guarantee Trust Co., and said that he was a member of the 14th Regt. of the N. G. N. Y., and had won several medals as a sprinter. He confessed that the goods found on him had been stolen.

He said that while he and Roman were standing in front of a jewelry store at Kansas City, with only 10 cents in their pockets, tired and hungry, some explosive caps were placed on the car track. Under cover of the noise one of the pair broke the show window with a brick and cleaned it out of all of the stock and then both ran away. They first went to Chicago, where they pawned some of the jewelry, securing enough money to bring them to Pittsburg. When arrested they were endeavoring to

New Members Elected by the Jewelers Security Alliance.

The regular monthly meeting of the executive committee of the Jewelers Security Alliance was held on Friday, the following members being present: Vice-president Champenois, Treasurer Karsch, Secretary Noyes and Messrs. Alford and Bowden, of the committee. The following new members were admitted:

I. D. Allen, Cooperstown, N. D.; J. B. Bennett & Co., Norfolk, Va.; Chas. Brandow, Bloomville, N. Y.; Jaeger Loan and Jewelry Co., St. Louis, Mo.; O. M. Nelson, Madison, Wis.; A. E. Palmer, Grand Forks, N. D.; E. Schmalz & Son and Chas. E. Zinn, St. Paul, Minn.; F. W. Birchard, Tiffin, O.; E. F. Bowman's Sons, Lancaster, Pa.; California Watch Case Co., San Francisco, Cal.; S. Callison, Dexter, Ia.; Carran & Green, San Francisco, Cal.; C. E. Cunningham, Council Bluffs, Ia.; J. E. Dailey & Co., Chicago, Ill.; Eagle Jewelry Co., Kansas City, Mo.; Eustis Bros., Minneapolis, Minn.; M. D. Franks, Omaha, Nebr.; L. E. Garrigus & Co., Newark, N. J.; L. A. Griffie, Boone, Ia.; William Hiles, Sioux City, Ia.; Jacob L. Jacobson, Omaha, Nebr.; Jassoy Bros., New York; J. Johanson and Roy A. Lee, San Francisco, Cal.; Sidney D. Lehmann, Gulfport, Miss.; S. T. Little Jewelry Co., Cumberland, Md.; Perry-Aldrich Co., Boston, Mass.; Geo. W. Pipes, Morgantown, W. Va.; Jos. O. Pokorny, Minneapolis, Minn.; Walter Starcke, Junction City, Kans.; C. G. Strippel and Tuckey & Kline, San Francisco, Cal.; G. W. Wills, Tecumseh, Nebr.; Wissing & Anderson, Sioux City, Ia.; Harrie M. Wright, Patterson, N. Y.; Percy P. Davis, Seattle, Wash.; P. H. Boyson Jewelry Co., Cedar Rapids, Ia.; W. K. Dunmore, Sterling, Ill.; Louis Freedman, New York; A. M. Greer, Iowa City, Ia.; A. A. Handle Co., Berkeley, Cal.; William Hellberg, Marshalltown, Ia.; C. Jansen, Davenport, Ia.; W. T. Miller, Marshalltown, Ia.; S. T. Morrison, Iowa City, Ia.; Eric A. Okerberg, Moline, Ill.; W. L. Phillips, New Brighton, Pa.; C. C. Price and Geo. C. Robinson, Marion, Ia.; Skidmore Drug Co., Skidmore, Mo.; Tollef Twenge, Decorah, Ia.; F. Wittstein & Sons, New Haven, Conn.

A reward of \$100 was ordered paid to J. A. Deskin and Michael J. Dugan for the arrest and conviction of Mike Hagan, professional crook, who smashed the window of Wm. J. Eroo, New Castle, Pa., and was sentenced to pay a fine of \$5 and cost of prosecution, together with the value of the goods stolen and three years' imprisonment in the Western Penitentiary of Pennsylvania. Hagan seems to have had influential friends who engaged the best criminal lawyer in that section of the country to defend him, but finding that the case would be vigorously pushed, and no compromise accepted, he finally pleaded guilty. Besides the reward, Mr. Eroo presented handsome gold and silver badges to the two officers who made the arrest, in recognition of their efficient work in the case.

The Paul-Gale-Greenwood Co., Norfolk, Va., which was recently formed by the merger of the jewelry interests of D. P. Paul, Frank H. Gale and Fred Greenwood, and which thereafter absorbed the Harris jewelry store will continue to operate two stores in this city. The headquarters of the corporation will be at Mr. Paul's present store, 190 Main St., pending the construction of the new building to be erected by the corporation at the corner of Granby St. and City Hall Ave. The Harris store will be continued in its present location, and will be known as the Main St. store of the company. The Paul store will be vacated as soon as the new building is completed, to which will then be moved the stock, offices and manufacturing departments.

FRED H. DECKER.

Recently arrested at Pittsburg, Pa., and now charged with robbing a Kansas City jewelry store.

HUGO ROMAN.

not fight extradition and went back without any trouble. Both men reside in Brooklyn and come of good families, so they say. Roman lives at 4 Decatur St., in that borough, and Decker at 11 Decatur St. The former is 22 years old and the latter 18.

The arrest was made through the cleverness of Detective Morgan McDonald, of this city. The detective was walking along Smithfield St. and saw ahead of him Roman dangling a number of rings in his hand. The officer accosted the fellow and when he refused to give satisfactory answers, took him to the central police station. In the prisoner's pockets were found 47 gold rings, two of them set with diamonds; a pearl scarf pin worth \$1,000 and two gold watches, two railroad tickets to Johnstown and two baggage checks for baggage left at Union Station. When asked who the second ticket was for Roman gave a wrong description of his partner, but, armed with a picture found on Roman, which proved to be a good likeness of Decker, the detective watched at the station, found Decker and arrested him and got his baggage. In Decker's pockets were found three rings, a watch and a pawn ticket for another ring. Decker said that he had formerly been

pawn goods in Pittsburg to get enough money to take them east.

The police are not altogether satisfied with the story of the thieves and will investigate their career. The men were neatly dressed and of good appearance.

John J. Cerkoff, Trenton, N. J., Files Voluntary Bankruptcy Petition.

TRENTON, July 11.—John Jacob Cerkoff, who had been in business at 145 E. State St. about a year, yesterday filed a petition in bankruptcy, through his attorney, Elwood W. Moore, Jr. The schedules show liabilities of \$1,781; nominal assets, \$1,017.

The Trenton creditors include Benjamin G. Frame, chattel mortgage on stock in store, \$250; D. Wolff & Co., goods purchased under lease, \$93; Remington Typewriter Co., \$50.

Cerkoff's assets consist of stock in trade (reversible to consignees), \$370; household goods (covered by conditional sale), \$220; tools, \$100; balance in Broad Street National Bank, 52 cents; personal property (all exempt), \$200; and accounts due from purchasers, about \$250.

He formerly worked for the Standard Watch Co., and then resided in Jersey City.

Retail Jewelers Form Organizations in Many States.

Successful Meetings Held in Pennsylvania, Illinois, New York, Michigan, West Virginia, North Carolina, South Carolina, Etc.—Resolutions Endorse Stamping Legislation and Protest Against Methods of Mail Order Houses.

Retail jewelers met in many States last week for the purpose of forming associations to represent the trade within each commonwealth, and to elect delegates to the convention which will be held in Rochester, N. Y., Aug. 3 and 4, for the purpose of forming a national association of jewelers. Among the most important meetings, reports of which appear below, are those of the jewelers of Pennsylvania held at Pittsburgh; Michigan, at Detroit; Illinois, at Springfield; New York, at Albany; North Carolina, at Greensboro; South Carolina, at Charleston; West Virginia, at Parkersburg; Connecticut, at Hartford, and Alabama, at Birmingham. When it is remembered that organizations had previously been formed in Missouri, Michigan, Massachusetts, Iowa, Kansas, Wisconsin, North Dakota, South Dakota, Minnesota and Nebraska, it will be seen that the organizations which will send delegates to the Rochester convention will, geographically at least, be representative of the trade of all parts of the United States.

One of the remarkable features of the meetings of last week was the small attendance of jewelers both at Albany, N. Y., and Springfield, Ill., when the State associations of these great commonwealths were formed. While it is true many dealers who did not attend endorsed the movement for organization and signified their intention of coming, nevertheless it is the fact generally commented upon that larger and more prominent members of the retail trade were conspicuous by their absence. On the other hand, some of the smaller States held meetings with an attendance that might be considered representative of the trade in their State.

In North Carolina the new jewelers' association absorbed the Optical Association, while in Michigan and Tennessee the meetings of optometrists and jewelers were held almost at the same time. In Connecticut no new State association was formed, it being decided by those who attended the convention to join the old organization formed many years ago, but which has not been much in evidence recently.

Pennsylvania Retail Jewelers' Association Organized to Correct Trade Abuses.

PITTSBURG, Pa., July 11.—The Pennsylvania Retail Jewelers' Association was organized here yesterday under favorable auspices. A Pittsburgh association with most of the local retail jewelers as members will be formed in September. This city has never had a retail dealers' organization. When the convention adjourned last night it was with the understanding that it would reconvene the first Wednesday in September to hear the report of the delegates to the national convention and to organize the Pittsburgh branch, which is expected to strengthen the State organization.

A. C. Gaul called the convention to order and appointed J. P. Archibald, Blairsville, P. C. Yester, McKeesport, and C. E.

Snyder, Pittsburg, a committee on constitution and by-laws. The committee reported favorably on the adoption of a draft made up principally from the constitution of the national association. The dues of the association, which starts off with a membership of about 50, will be \$2 a year.

A number of resolutions were presented and adopted. The principal resolutions follow:

Whereas, The cause of honesty in the jewelry trade has suffered seriously from the prevalence of untrue quality marks on gold and silver products; and,

Whereas, The encroachment of retail mail order houses and department stores on the legitimate domain of retail jewelers have been attended with widespread and intensifying injury; and

Whereas, The practice of retailing by jobbers

A. C. GAUL, PRESIDENT PENNSYLVANIA RETAIL JEWELERS' ASSOCIATION.

has grown to proportions which threaten the complete demoralization of just retail values to the great loss of the retail jewelry trade; therefore, be it

Resolved, That we record our condemnation of all marks on gold and silver products which are not indicative of their true quality, and that we heartily approve of the new federal stamping law relating to gold and silver jewelry, believing it will aid materially in the promotion of honest qualities and honest methods in the trade.

Resolved, That we favor the enactment by the general assembly of this State of legislation following substantially the lines of the federal law directed against dishonest qualities or false stamps on gold and silver jewelry, believing that supplemental legislation by the States is indispensable to the full realization of the benefits to accrue from the federal enactment.

Resolved, That we favor such action as shall secure to the retail jewelry trade exemption from the unfair, unjust and ruinous competition by the retail mail-order concerns, department stores, and similar alien elements, and we call upon manufacturers and wholesalers to lend their assistance in such measures as shall recognize the rights and interests of the retail jewelry trade, and afford to the trade that full measure of protection to which it is entitled.

Resolved, That we condemn the practice of retailing by wholesale jewelers as fraught with great and widespread injury to retail jewelers and as being fundamentally unjust in that it involves competition between the wholesaler and retailer who buys from such wholesaler. We therefore regard the practice as being hostile to the welfare

of the jewelry trade when such retail dealing is not regularly maintained as a separate business apart from the wholesale business.

Resolved, That it is the sense of this association that retail jewelers should confine their purchases of watches, clocks, jewelry and kindred articles, as far as practicable, to those manufacturers and wholesale dealers who restrict their sales to retail jewelers, or who sell under those conditions only which enforce retail prices recognized by the retail trade as reasonable and just.

The election of officers resulted as follows: A. C. Gaul, Sharpsburg, president; J. P. Archibald, Pittsburg, first vice-president; A. Isaacs, Pittsburg, second vice-president; William Haines, Philadelphia, third vice-president; T. H. McNary, Washington, Pa., fourth vice-president; C. S. Wiley, Pittsburg, secretary; J. P. Steinmann, Pittsburg, treasurer.

The following executive committee was appointed: P. C. Yester, McKeesport, and F. E. Leitzell, Scottsdale. The following delegates were elected to represent the association at the national convention in Rochester, N. Y.: Mr. Gaul, Mr. Archibald, Mr. Wiley, J. F. Brozier.

In addressing the convention, upon assuming the chair as president, Mr. Gaul called attention to the abuses of the trade. His address will be given in THE JEWELERS' CIRCULAR—WEEKLY in another issue. Extemporaneous talks followed by Mr. Wiley, Frank R. Coe, A. Katzenmeyer, Mr. Leitzell, Mr. Steinmann and others.

While the selling of goods at retail by wholesalers is deplored, Mr. Wiley said the association is not yet strong enough to correct what is termed an evil. No effort will be made for the present to prevent "curbstone" dealers from doing business, but legislation probably will be asked.

Congressman James Francis Burke and James W. Wardrop, secretary and general manager of the Merchants and Manufacturers' Association, were to have spoken, but through a misunderstanding neither appeared.

While the attendance was not as large as was anticipated, yet there is every indication that the association will be a success, because those who have joined its ranks are enthusiastic. A further increase in membership, it is expected, will be announced at the September meeting. No jobbers or wholesalers were admitted to the association.

Jewelers of Empire State Meet at Albany and Found Association.

ALBANY, N. Y., July 11.—The Empire State has finally joined the ranks of the other commonwealths which have a State association of jewelers, an organization having been formed in this city yesterday by representatives of the trade from New York, Brooklyn, Albany, Troy, Coopers-town, Cobleskill, Auburn, Fort Edward, Albion, Batavia and other cities and towns. The meeting was held at Centennial Hall and was the result of the call issued by Henry J. Pfantz, of this city, who acted as local secretary.

The meeting was called to order by Edward Mix as temporary president, and the objects of the association were outlined to those in attendance; generally they are for the purpose of protecting members from unjust competition by retail mail order houses and to enforce the laws against false marking and branding of silver and

gold, and in other ways taking steps to remedy the evils from which the trade has suffered for some time.

No delegates were elected to represent the association at the convention, which will be held in Rochester next month, but the organization elected officers for the year as follows: President, Samuel Tappin, Troy; first vice-president, W. A. Tice, Auburn; second vice-president, Theodore A. Kohn, New York; general secretary, Henry J. Pfantz, Albany; treasurer, C. C. Bradley, Batavia; executive committee: Frederick Jennings, E. H. Souder, W. F. Antemann, Jr., William Kennedy, H. M. Seaman, John Fuhrman, Albany, and C. H. Paris, Troy.

It was decided that President Tappin make the appointment of the delegates to the national convention at a later date.

Among the jewelers attending the meeting were: M. E. Lippitt, Cooperstown; C. H. Shafer, Cobleskill; F. P. D. Jennings, Albany; Sidney A. Meren, Brooklyn; G. C. Beverly, Fort Edward; F. L. Hunke, Albany; J. W. Mende, Albany; Otto R. Mende, Albany; J. P. Buenau, Albany; R. P. Thorn & Sons, Albany; Marston & Seaman, Albany; L. M. Derby, Albion; Edward Mix, Albany; J. Strom, Brooklyn; E. H. Souder, Albany; William H. Kennedy, Albany; W. F. Antemann & Son, Albany; J. Neafach, Albany; M. Kunkel, Albany; John Fuhrman, Albany; H. J. Pfantz, Albany; C. E. Cannady, Scholharie.

In addition to the many jewelers who attended, a large number of letters were sent by jewelers in all parts of the state who were unable to be present, endorsing the movements and wishing the convention every success.

Connecticut Jewelers Meet at Hartford and Decide to Join Old State Association.

HARTFORD, Conn., July 11.—The meeting called here for the purpose of forming the Connecticut Retail Jewelers' Association was not as largely attended as had been expected. It was learned just before the meeting by those who were back of the movement that there was already an association of retail jewelers in the State. For this reason the intention of forming a new organization was abandoned and those who were present decided instead of doing so to apply for admission to the organization already in the field.

Among those who were present were P. H. Stevens and C. M. Wilcox, of this city; T. O. Reed, Torrington; R. J. Atwell, Middletown; H. H. Long, Thompsonville; Wm. B. Sniffen, Sandy Hook; W. D. Upson, Waterbury. Among others who indicated their wish to be enrolled as members were: M. C. LeWitt, New Britain; F. T. Bidwell, Thomaston; R. H. Burgess, Greenwich, and S. Kronholtz, Stanford.

In talking over the plans the opinion was expressed that if those who have shown an interest in the project for a new association would all join the organization now in existence its membership would be increased to more than 100 and its influence in the trade would be materially strengthened. It was decided to send the names of those wishing to join to S. H. Kirby, the secretary of the present association.

Members of Retail Jewelers' Association of Illinois Hold Interesting Meeting and Listen to Lectures.

SPRINGFIELD, Ill., July 12.—The members of the Retail Jewelers' Association of Illinois met at the Leland Hotel in this city yesterday, and perfected the organization already formed. The officers elected at the previous meeting, April 10, and which meeting adjourned until July 11, were unanimously confirmed. The officers are: S. M. Strain, Nokomis, president; C. W. Slaybaugh, Taylorville, vice-president; H. C. Watts, Forrest, secretary and treasurer. The executive committee consists of W. H. Hammond, Bement; Andrew Anderson, Rankin; J. C. Pappmeier, Beardstown.

The meeting began yesterday by the dis-

S. M. STRAIN, PRESIDENT ILLINOIS RETAIL JEWELERS' ASSOCIATION.

tribution of badges and a call to order. The secretary read the minutes of the previous meeting, which were approved unanimously. Then followed an address by the president, who said:

ANNUAL ADDRESS OF S. M. STRAIN.

Brother Retail Jewelers—We are here to-day representative of the retail jewelry interests of the State of Illinois; we are here as an organization with a deliberate purpose, we have not come here simply to lay aside our work for a day and meet with no object in view no, there is that determination born of necessity, to meet the requirements of the present age and overcome the evils that beset us as a class of business men.

The Illinois Retail Jewelers' Association was formed in this room on April 10, of the current year; the attendance was small and the outlook was very discouraging to the promoters of organization; however, we who were here put on a stiff upper lip, buckled on the shield and armor and tackled the job. The outcome of our efforts was gratifying; we had many letters from all parts of the State—from large towns and small towns they came, and when we left this place we had a membership of 68. Many more have been added since that time; the prospects for a steady growth are gratifyingly flattering. Almost daily I have letters of inquiry from jewelers all over the country in regard to our aims and purposes; I have invariably answered these letters, stating that the national organization which will federate these State associations will be formed in August, and that it will be to advantage to have formed by that time all State organizations.

There is at present an unprecedented demand for organization on the part of the retail jewelers, and as soon as it is well accomplished we will be a great power in the mercantile world. Jewelers are as a rule well satisfied with their lot, and are slow as a rule to awaken to the necessity of forming organizations for the preservation of their interests, individual and collective, and as strong as the statement may seem, still the fact remains that there are few jewelers who are con-

petitors who are congenial and work harmonious. This is an end which should be accomplished.

Your president took up the work of organization in December, 1904, at which time an article appeared which met with a ready response, and among the letters received was one from E. R. Roehm, secretary of the American Association, calling my attention to that society. I at once enlisted for the war with the American Association as my army, and now I have command of the first Illinois. From time to time, as I read the reports of the forming of State organizations, I grew more and more enthusiastic; in February of this year I urged the officers of the American Association to get to work on the Illinois jewelers and urge them forward to the necessary step. Mr. Roehm, Roberson and myself went to work and the present association is the result of the hard work we did at that time, and it is the intention to keep up the work. We are not satisfied with the bare fact that we are organized, we expect to begin now to show results, and we hope to have every retail jeweler in Illinois enlisted as a member before we hold another meeting.

There is a great deal of apprehension on the part of the jeweler lest the mail order houses gobble up all the business. This is hogie, and the bogie man will not get us at all. We must put out our flag and rally round it. Some who are not alive to the situation will suffer and have suffered from their attacks, but we must fight fire with fire; advertise, offer inducements as they do, show up their methods. Tell your customers that they are not asked to buy your goods "side unseen." How many will let you blindfold them before they are allowed to select the goods? That is the way the mail order bogie man does. Can you go to one of these houses and pick out the article you want? NO, they will bring you a catalogue and let you select the article, then the house roustabout will go and get it for you, but you have passed up the coin first, and you will have to be satisfied with what is brought to you. Talk this to the customer. Tell them that if they will pass over the lucre first that you will blindfold them and let them take a grab, if they will take what they get and make no kick; tell them that in this way you will meet any catalogue house price. Our patrons are not turned so far toward these business leeches that they cannot see the justice of such arguments, still they were easily influenced to go there and by proper methods it will be easy to persuade them, they must come back to us.

I hope to have the hearty co-operation of all the jewelers who are alive to their own interests in the work we have before us; it is the intention to make this Illinois association the brightest star in the national federation, and to accomplish that end we need the undivided support of the jewelers in general.

Now we have the start, let us roll up our sleeves, start our think boxes and before we leave this city we will have well laid plans, well fraught with the purpose of correcting the existing conditions that endanger the retail jewelers.

The secretary's report showed a membership of about 150, of which 50 applications were received during the last month.

A set of resolutions and by-laws stating the object of the association were then read and adopted. The objects are the same as those of all other retail jewelers' organizations now forming, viz., to overcome the competition of mail order houses and department stores and to promote a more cordial feeling among retail jewelers themselves.

H. E. Duncan, mechanical expert for the American Waltham Watch Co., then delivered an interesting lecture on "The Main-spring, the Power Behind the Train." One of the chief points in Mr. Duncan's lecture was that in putting in a new mainspring great care should be exercised in selecting one of the desired breadth and thickness. Mr. Duncan incidentally remarked that the Waltham Watch Co. produced annually 12 tons of mainsprings.

After an enjoyable dinner the president read a paper on "Advertising," which is published in full on page 84 of this issue, and

the secretary read a paper on "Unfair Competition."

C. T. Higginbotham, the superintendent of the South Bend Watch Co., then delivered an interesting lecture on "The Escapement, the Most Vital Part of the Modern Watch." This was illustrated by wooden models and attracted the undivided attention of all present. After his lecture Mr. Higginbotham answered questions in regard to the escapement to the satisfaction of all present.

The association then went into executive session, and vital questions were discussed. It was agreed to affiliate with the Retail Jewelers' Association of Cook County.

S. M. Strain was elected a delegate to the Rochester convention, with power to appoint an alternate in case he could not go. The time and place for the next meeting was not decided on, but was left to the executive committee. It will probably be held in Chicago.

The following members were present: F. B. Tinker, Chicago; Andrew Anderson, Rankin; Frank B. Means, with M. M. Stivers, Lexington; S. Sve, Pana; J. F. Goudy, Fairbury; E. F. Randolph, Farina; H. C. Watts, Forrest; E. E. Barber, Sullivan; E. W. Bassett, Jacksonville; D. W. McDermard, Buda; J. H. Schmith, Clinton; B. M. Judd, Colfax; George C. Schreiber, Lincoln; G. A. Donaldson, Girard; L. A. Gardner, Edwardsville; C. W. Slaybrough, Taylorville; S. M. Strain, Nokomis; Sam Bentley, Raymond. Among the representatives of manufacturers were H. E. Dabran, with the Waltham Watch Co.; C. T. Higginbotham and J. W. Frazier, with the South Bend Watch Co.; A. L. Sackett, with the Duerber-Hampden Watch Works; Chas. H. Tew, with the E. Howard Watch Co., and Geo. F. Johnson, J. W. Armbruster and A. S. Wormwood, with the Illinois Watch Co.

Many letters were received from members who regretted they could not attend the meeting, and the next meeting promises to be better attended.

Annual Convention of the Opticians of Tennessee Held at Nashville.

NASHVILLE, Tenn., July 11.—The Tennessee Opticians' Society met here last week, with sessions Friday and Saturday. A number of thoughtful and instructive addresses were delivered. President H. J. Cook, Knoxville, pronounced the meeting the best attended and most interesting held since the organization of the society. The convention will be held next year at Knoxville, on a date to be fixed by the executive committee.

Following was the programme of the two days' session: President's address, "Organized Effort," William E. Huston, Kansas City, Mo., secretary American Optical Association; "Educational Benefits of Organization," Weakley Ruth, Shelbyville; "Optical Practice," D. M. Quarles, Clarksville; "Optical Organizations of To-day," H. J. Cook, Knoxville; "Therapeutic Optics," Dr. W. S. Metcalfe, Knoxville; "Social and Pecuniary Benefits of Organization," H. W. Liggette, Memphis; "Professional Status of Opticians," C. L. Andrews,

Union City; "Eye Strain and Its Relation to Health," Dr. Edward Goetz, M.D., Knoxville; X-ray exhibit, Prof. W. O. Horner, Cleveland, O.

In all the addresses delivered before the meeting the prime object of the organization was emphasized—that is, the necessity of placing the optician's business on a higher plane. The paper read by Dr. Goetz was of special interest because of the fact that in early life he was a jeweler, then he became an optician and finally acquired the title of M.D.

The following officers were elected for the ensuing term: Dr. H. J. Cook, Knoxville, president; Harry J. Liggette, Memphis, vice-president; Weakley Ruth, Shelbyville, secretary and treasurer; D. M. Quarles, Clarksville, chairman of the executive committee, and George R. Calhoun, Nashville, and Prof. W. O. Horner, Cleveland, members of the executive committee.

A resolution was passed extending thanks to the Merry Optical Co., of Memphis, for its handsome exhibit of opticians' wares.

Tennessee Jewelers Form State Association and Elect Officers.

NASHVILLE, Tenn., July 11.—A number of retail jewelers of the State met at the Maxwell House, Saturday morning, and organized the Tennessee Retail Jewelers' Association. The organization will be affiliated with the National Retail Jewelers' Association.

The following officers were elected: J. B. Carr, Nashville, president; R. B. Herzer, Nashville, secretary and treasurer; L. Fish, Chattanooga, first vice-president; J. Malford, Memphis, second vice-president. Executive Committee: George R. Calhoun, Nashville; H. J. Cook, Knoxville; W. O. Horner, Cleveland; J. W. Thornton, Knoxville; Weakley Ruth, Shelbyville; E. B. Cayce, Franklin; D. M. Quarles, Clarksville.

Delegates to the national association, which will meet in Rochester, N. Y., August 3, were selected as follows: H. J. Cook, G. R. Calhoun, W. O. Horner, Weakley Ruth and D. M. Quarles.

Resolutions were adopted, declaring the purposes of the association to work for the abatement of trade abuses, to promote legislation prohibitive of deceptive marks, and to co-operate in measures for the improvement of conditions of education, apprenticeship and employment. These resolutions were prepared by a committee composed of George R. Calhoun, chairman; D. M. Quarles and E. B. Cayce.

Texas Optical Association Meets at Waco and Elects Officers.

WACO, Tex., July 11.—The Texas Optical Association held an annual meeting here in the last two days, at which an attractive programme was carried out, a number of members speaking on subjects of interest to the trade.

The following are the officers of the association: Dr. West Cathcart, Fort Worth, president; B. R. Stocking, Belton, secretary; John Wyche, Waco, chairman executive committee.

North Carolina Jewelers Form a State Association and Absorb the Optical Organization.

GREENSBORO, N. C., July 11.—Twenty jewelers from different parts of the State met in the rooms of the Chamber of Commerce in this city yesterday and organized the North Carolina Retail Jewelers' Association. Letters from 113 other jewelers in the State were received stating that they would join.

The meeting was called to order by R. C. Bernau, of this city. He introduced Mayor T. J. Murphy, who delivered the address of welcome. Mayor Murphy said that he was glad to see so many jewelers present, as he knew they were all "bright" men. In closing, he congratulated them upon organizing a State association and hoped that it would grow until it had all the jewelers of the State as its members.

The call for the meeting was read, setting forth that the objects for which the new organization is to strive, are as follows:

First—To get acquainted with each other.

Second—To correct trade abuses, such as wholesale dealers selling at retail; price cutting; department stores advertising goods for less than honest goods can be bought, and also to see that the new stamping law is enforced.

The following members were appointed to draft a constitution and by-laws: H. E. Vogler, Winston-Salem; J. T. Burke, Wilmington; J. H. Bell, Concord; W. C. Correll, Concord; S. Schiffman, Greensboro. The committee made its report, which was adopted. The constitution and by-laws are nearly the same as those of the Iowa Retail Jewelers' Association.

The following officers were elected: President, R. C. Bernau, Greensboro; vice president, H. E. Vogler, Winston-Salem; secretary and treasurer, A. P. Staley, High Point; directors, J. T. Burke, Wilmington; C. N. Brown, Winston-Salem. These five officers will also constitute the executive committee for the next year.

Messrs. R. C. Bernau, Greensboro, and A. P. Staley, High Point, were elected delegates to the National Retail Jewelers' Association, which meets in Rochester, N. Y., Aug. 3.

The following communication was received from the North Carolina Optical Association, which was accordingly merged in the jewelers' organization:

"We, the remaining members of the State Optical Association of North Carolina, do this day declare the said optical association disbanded by the order of the officers of said association. The treasurer is hereby requested to turn over to the treasurer of the North Carolina Retail Jewelers' Association all the funds and papers with his final report. A. P. Staley, president; R. C. Bernau, secretary; W. H. Leonard, treasurer; H. E. Vogler, vice-president; C. F. Denny, finance committee."

The following jewelers were present: J. H. Bell, Tarboro; J. S. Campbell, Washington; C. N. Brown, Winston-Salem; J. R. Ellington, Greensboro; C. H. Wallace, Washington; J. E. Deans, North Wilkesboro; C. F. Denny and L. H. Covert, Greensboro; W. H. Leonard, Salisbury; S. Schiffman, Greensboro; A. P. Staley, High

West Virginia Jewelers Organize at Parkersburg.

PARKERSBURG, W. Va., July 12.—A most important convention to the jewelry trade of West Virginia was held yesterday at the Chancellor Assembly Hall, in this city, and a State organization of jewelers, known as the West Virginia Retail Jewelers' Association, was formed. The meeting was called by C. Edmond Baab, the local secretary, and was originally to have taken place Tuesday, but was later postponed until yesterday.

The association elected the following officers for the ensuing year: President, T. A. Westmyer, Wheeling; first vice-president, C. A. Wernecke, St. Mary's; second vice-president, C. D. Springston, Spencer; general secretary, C. E. Baab, Parkersburg; treasurer, A. H. Setron, Parkersburg.

The most important resolutions adopted were similar to those adopted by the Pennsylvania jewelers (published on page 43).

Michigan Society of Optometrists Hold Annual Convention—To Continue Agitation for State Law.

DETROIT, Mich., July 14.—The Michigan Society of Optometrists held its annual convention here July 11-12, the principal business session being on Wednesday. President Peter Scholler, of Hancock, was unable to be here, so Vice-President Evan Thomas, of this city, called the meeting to order. Mr. Scholler's address, reviewing the work of the year in Michigan, was read by Mr. Thomas.

The principal topic of discussion was "Our Optical Bill." There was unanimous approval of the plan again to go to the legislature next Winter, and work for a law creating a State board of examiners to pass upon the qualifications of opticians. The oculists vigorously opposed this bill a year ago last winter.

The programme of papers read was as follows: "Muscular Asthenopia," E. W. E. Paterson, Grand Rapids; "Spasm of Internal Strabismus," J. D. James, Detroit; "Michigan Society of Optometrists—Past and Future," Ernest Eimer, Muskegon; "Prisms," A. W. Kludt, Detroit; "Diagnosis of Error of Refraction by Skiascopy," N. K. Standart, Detroit; "Ocular Symptoms of Locomotor Ataxia," Dr. John S. Owen, Detroit; "Health Ray Lenses," Dr. Arthur C. Campbell, Topeka, Kan.

Officers were re-elected as follows: President, Peter Scholler, Hancock; vice president, Evan Thomas, Detroit; secretary-treasurer, Ernest Eimer, Muskegon; members of the Board of Directors—Albert W. Kludt, Detroit, and W. R. Stevenson, Holland. It was decided to hold the next annual meeting here in July in conjunction with the convention of the Michigan Retail Jewelers' Association.

Charles Djuberg has sold his business at Turtle Lake, N. Dak.

Michigan Jewelers Hold Annual Convention and With the Opticians Are Pleasantly Entertained.

DETROIT, Mich., July 14.—Two hundred and fifty-five members of the Michigan Retail Jewelers' Association and the Michigan Society of Optometrists, with the wives of many, were here, this week, attending their respective conventions. As 60 per cent. of them are both opticians and jewelers, the two conventions were in close harmony, members of both bodies taking in the boat ride to the St. Clair Flats, Thursday afternoon. This entertainment was provided by the Detroit Jewelers' Board of Trade, consisting of manufacturing and wholesale jewelers and opticians.

The jewelers attempted to hold a session on the steamboat, but there was too much amusement, and no business was transacted until Friday, when President P. J. Koke, of Grand Rapids, called the delegates to order in the Hotel Normandie convention hall.

The Hon. Sidney A. Bigney, of S. O. Bigney & Co., Attleboro, Mass., delivered an address, of an informal character, calling attention to the prosperous condition, not only of the jewelers, but of men in every class of industry. He vigorously advocated the strenuous life, especially in business, and heartily endorsed the organizing plans of the retail jewelers of the country.

Informal talks were also given by A. L. Sackett, of the Dueber-Hampden Watch Co., Canton, O.; L. Boyle, Chicago; R. L. Weyhing, of Weyhing Bros. & Co., Detroit; H. C. Carpenter, of the South Bend Watch Co., South Bend, Ind.; and W. B. Robertson, Detroit.

There was no contest over the election of officers, the following being chosen: President, Fred Russell, Mt. Pleasant; vice-president, Clark D. Gardner, Manistee; secretary-treasurer, Sidney D. Thompson, Shepherd; members of the executive committee: Wm. F. King, Jr., Adrian; E. R. Albaugh, Hillsdale.

Delegates to the Rochester convention were chosen as follows: A. B. Hull, Adrian; W. F. King, Jr., Adrian; Edward R. Roehm, Detroit; Max Jennings, St. Clair; E. R. Albaugh, Hillsdale; P. J. Koke, Grand Rapids; S. D. Thompson, Shepherd; E. E. Thomas, Detroit; C. D. Gardner, Manistee; Fred Russell, Mt. Pleasant; Frank Dyer, Caro; V. C. Morse, Ithaca; G. A. Foland, Mt. Pleasant; Joseph Siegel, Grand Rapids.

N. K. Standart, optician of Detroit, suggested that next year the two associations, which will again hold sessions here in July, be more closely allied; that they alternate forenoons for business, leaving the afternoons and evenings for entertainment. The executive committee are favorably disposed toward the proposition. The Detroit Jewelers' Board of Trade will be requested to give the excursion on the river on the last day, so as to keep all the delegates in the city.

The delegates are enthusiastic over the coming Rochester convention, and it is certain that Michigan, the mother state in the work of organization, will be well represented.

South Carolina Jewelers Hold Convention at Charleston.

CHARLESTON, S. C., July 11.—A number of jewelers of the State took part in an interesting meeting yesterday, at which the South Carolina Retail Jewelers' Association was formally launched and officers elected for the coming year. The meeting was held in the banquet hall of the Charleston Hotel, and was called to order by R. H. Allan, of Jas. Allan & Co., who had acted as local secretary. Jas. Allan made a brief address in favor of the organization and the necessity of jewelers of this State following the example of those in other States in having a body that would represent their interests on questions which affect the trade.

A constitution and by-laws were adopted, and the following officers elected: Stephen Thomas, Charleston, president; S. Wolfram, Darlington, vice-president; R. H. Allan, Charleston, secretary; R. F. Fleming, Laurens, treasurer. Executive committee: Stephen Thomas, W. R. Bristol, S. Wolfram, R. F. Fleming, R. H. Allan, Gustav Sylvan and W. R. Thompson.

The secretary was ordered to notify all the jewelers of the State of what had been done at the meeting and extend an invitation to all to attend the next meeting, which will be held in September in this city.

The following were among the jewelers present who took part in the deliberations, and in addition the movement was indorsed in a number of letters received from jewelers in all sections of the State: W. A. Thompson, Sumter; H. W. Mabus, Charleston; S. Wolfram, Darlington; Fleming Bros., Laurens; Frank Duffy, Jr., Charleston; I. R. Duffy, Charleston; S. Thomas & Bro., Charleston; Stephen Baldwin, Charleston; Jas. Allan & Co., Charleston; Sylvan Bros., Columbia; R. S. Yeagin, Iva; J. F. O'Rourke, Charleston; W. R. Bristol, Beaufort.

Retail Jewelers of Alabama Hold Large and Enthusiastic Meeting at Birmingham.

BIRMINGHAM, Ala., July 12.—A large and enthusiastic meeting of the retail jewelers of Alabama was held in the parlors of the Morris Hotel yesterday, and the Alabama Retail Jewelers' Association was organized.

The objects of the association are to unite in sentiment promotive of the highest welfare of the trade, to encourage the supremacy of standards of truth and honesty in all jewelry and related products, to promote legislation opposed to untrue or deceptive quality marks on jewelry manufactures and to co-operate in promoting improved conditions of education, apprenticeship and employment.

The following officers were elected: President, P. H. Linnehan, Birmingham; vice-president, R. Heine, Talladega; secretary and treasurer, Max Robinson, Birmingham.

The South Bend Watch Co., South Bend, Ind., closed its factory for one week, beginning June 30.

Mr. Roberts, Carlock, Ill., will shortly move to Danvers, in the same State. Mr. Roberts was the only watchmaker at the former place.

Thieves Rob Three Jewelry Stores in Cleveland, O., and Escape.

CLEVELAND, O., July 14.—Last Sunday night three jewelry stores in this city were robbed and the fact was not discovered until Monday morning, when the police were notified. As the operations were identical, it is presumed that the same gang did the three jobs. Entrance was secured through the front transom in each instance and the goods taken were the best that could be found in the stores; no attempt was made to open the safes and the robbers had to be satisfied with what they could find outside and in the show cases.

The boldest piece of work was at the store of F. B. Guyon, in the Colonial Arcade, where a watchman is supposed to be on duty most of the time. The office of the Colonial Hotel also opens into this arcade. A number of watches, stick pins and other goods, amounting in all to about \$200 in value, were taken.

At the store of William J. Schwartz, 126 Superior Ave., several watches and rings and two revolvers were taken. He estimates the loss at about \$100.

Thirty-four gold watches were taken from the store of Nat. Ruggles, 431 Superior Ave., and all but six of them were solid cases. A lot of pins and other goods are missing from this store also.

Because of the time that elapsed between the robberies and the reports, there is little hope of getting any trace of the thieves. They seem to have escaped without leaving any trace. But it is believed from the manner in which they did their work that they are experienced in the business.

Changes in Method of Assessment of Jewelers' League Proving Satisfactory.

The regular monthly meeting of the executive committee of the Jewelers' League of New York was held at the office on Wednesday of last week, the following gentlemen being present: President Street, Vice-presidents, Karsch and Gresson, Messrs. Hodenpyl, Wormser, of the committee, and Secretary Marsellus.

The usual routine of business was transacted, such as approving the treasurer's report, granting changes of beneficiaries, and admitting applicants. Payments were authorized to the beneficiaries of Frank W. Harmon, John W. Ruth, Reuben Harris, and Noah Mitchell, whose deaths occurred in the month of May.

The change in the method of assessment which went into effect on May 1, has given quite satisfactory results up to the present time, the officers say. They add that the lapse in membership, because of the change, was exceedingly low—less than one-half of what was anticipated—and, consequently, they feel most sanguine of a long and prosperous life for the organization.

The next regular meeting of the executive committee will be held Wednesday, Aug. 8.

The Paul-Gale-Greenwood Jewelry Co. was recently awarded the contract to supply the silverware to the Fairfax Hotel, Norfolk, Va.

Death of Alfred Beit.

Head of the De Beers Consolidated Mines, Ltd., Expires in London.

A cable message received Monday from London announced the death in that city of Alfred Beit, the president of the De Beers Consolidated Mines, Ltd., a man who had been the associate of Jameson and Cecil Rhodes, and who has been rated as the richest man in England. Mr. Beit's death took place in his bachelor apartments. He was 53 years of age, and was a native of Hamburg, Germany.

That Mr. Beit was a most able assistant of Cecil Rhodes in early as well as in later stages of the development of South Africa accords with the testimony of all observers. An especially active part was taken by Mr. Beit in bringing the diamond industry into an orderly and systematic condition, and finally in organizing it into what has been declared to be the most complete monopoly in the world. While others did their share in the field work, yet it has been recognized that to Mr. Beit's commercial training and thorough business methods is due the fact that the business has been placed on a basis which has proved so satisfactory and profitable to those engaged in it for a number of years.

His labors were not limited to the diamond industry, however, as he took a prominent part in the development of the South African gold mines, and also in the building of railways and other enterprises, in many of which he was director and leading spirit. It has been said that he financed the Jameson raid. Before the Jameson commission Beit gave testimony favorable to Jameson.

Back in 1875 Mr. Beit, then an obscure buyer for the diamond firm of Lippert & Co., Hamburg, Germany, made his first appearance in the diamond field, where he soon became a prominent figure. After being on the ground a few years he established himself in business as a diamond buyer on his own account. An important change was made by him in 1882, when he joined the firm of Jules Porges & Co., of Paris, as their Kimberley representative. This firm, which had started business as diamond merchants in 1869, had from the beginning taken the keenest interest in the Rhodes schemes. In 1886 Mr. Beit became a partner in the firm. Three years later Mr. Porges retired, and the firm became Wernher, Beit & Co.

This firm is said to have assisted Rhodes more than did all others in bringing about the consolidation of the diamond interests. In speaking of Mr. Beit's share in the work Gardner F. Williams, long superintendent of the De Beers mines, said: "The great initiative and business capabilities of Mr. Beit were heartily recognized by Rhodes, Mr. Beit being largely instrumental in building up the diamond mining industries, and bringing the dreams of Rhodes into practical shape."

Beit had a university training as well as business experience to equip him for his South African work. When he reached that country not a foot of the 12,000 miles of railways had been laid, and he made the 400-mile trip from Cape Town to Kimberley in a bullock cart, along a road crowded

with madly rushing seekers after gold. He found the diamond business in a state of chaos. He saw that diamonds might become so cheap as to be profitless to mine, because of the tendency to dump the product on the market in too large lots. Aided by Cecil Rhodes, whom he preceded in South Africa by several years, he began carrying out his idea of cornering the diamond market and booming the prices by buying up scattered claims. Even before the advent of Rhodes he had become the first "diamond king." The coming of Rhodes greatly enhanced the opportunities and the fortune of Beit, and soon he became the largest individual owner of mines and land in South Africa.

He controlled the three great "cones" or mines in Kimberley, whence nearly all the diamonds of the world come. Beit amassed the largest individual fortune ever made out of gold and diamond mines. He himself could not estimate his wealth. Some people have called him a billionaire, and said that he was the richest man in the world, but in recent years a more conservative view of his great wealth has been taken.

Notwithstanding the fact that he owned or commanded the companies which owned the only diamond mines of importance in the world and controlled their output and their prices, he did not affect jewelry at all for personal adornment, and never wore diamonds.

This colossus of finance, like Rockefeller, was seldom seen, hardly known, except to the coterie of friends whom he entertained at his bachelor apartments, at 26 Park Lane, London.

His friends called him "Alf." and referred to him as the "Little Man." The following description of his personal characteristics has been given: He was undersized, bald, nervous and timid, of slender physique, with the large, luminous eyes of the dreamer, the broad head of the acquirer, the point of view of an optimist and the most amazing faculty of devising and executing schemes for getting everything he wanted. Like Rhodes, he was a man of big commercial ideas and a supreme gift of gab. He was a bundle of nerves, ill a large part of the time, and in times of excitement his nervous excitability was so distressing that it was impossible for him to sit still for a moment.

The gifts of Mr. Beit to charity in recent years are said to have been on a generous scale even for a man of his wealth. One of his latest gifts was \$500,000 to establish a hospital in Hamburg.

Three years ago at Johannesburg Mr. Beit suffered a stroke of apoplexy, since which time he has been practically an invalid.

Court Refuses to Appoint Receiver for H. A. Kirby Co., But Permits Examination of Books.

PROVIDENCE, July 11.—The case of Archibald Rutherford against the H. A. Kirby Co. and Henry A. Kirby, came up to-day in the United States Circuit Court in Providence, before Justice Brown. Jacob Fromme, of New York, and William J. Brown, of Providence, appeared for Mr. Rutherford, and Edward Bassett, of Providence, appeared for the Kirby Co. and Mr. Kirby. A hearing on oral testimony on Mr. Rutherford's motion for a receiver, and an inspection of the books of the H. A. Kirby Co., was given. The nature of the litigation was briefly outlined in last week's issue.

Mr. Rutherford commenced his action June 11, filing his bill of complaint and asking for an injunction, inspection and receiver. Mr. Rutherford claimed that he was a one-fifth owner of the \$150,000 capital stock of the H. A. Kirby Co., Mr. Kirby owning the other four-fifths. The H. A. Kirby Co. was incorporated in Rhode Island in September, 1896.

Mr. Rutherford's claims were explained as follows: "The company declared a scrip dividend in the year 1899 of \$150,000, showing that the profits were more than 100 per cent. in three years, and that Henry A. Kirby, by means of his ownership and the controlling interest in the stock of the defendant corporation, and of his position as president and treasurer thereof, wrongfully took to himself and assumed entire management and control of said corporation; that its property and assets have been and are being managed, used, and applied and absorbed by Mr. Kirby for his own use and benefit."

At the hearing it was admitted that at a special meeting called in 1905, all the property and assets of the H. A. Kirby Co. were sold to him for a promissory note of his own for \$500,000, payable in six years at four per cent., with the proviso, however, that he was to return the property intact to the company in six years, and was then to pay to the company all the surplus profits that he made over and above the four per cent. that he was to pay on his note.

The object of this transfer, it was said, was to obtain certain advantages arising from individual control of the business. The plaintiff claims that the transfer was in violation of his rights and was illegally effected.

The testimony indicated that two new stockholders were added, namely, Mr. Maher, the bookkeeper, who said that Mr. Kirby gave him 200 shares. Mr. Kirby testified that he sold 600 shares to Mr. Perkins.

Mr. Rutherford claimed that he had made a large proportion of the sales for the concern. He said that his sales were as follows: In 1897, \$119,334.31; in 1898, \$167,729.59; in 1899, \$178,227.07; in 1900, \$176,550.35; in 1901, \$183,801.25; in 1902, \$208,108.73; in 1903, \$248,445.06; in 1904, \$230,253.55; in 1905, \$250,138.24; and for the six months in 1906, about the same proportion.

It was claimed that Mr. Rutherford sold at least on an average of 40 per cent. of the whole output of the H. A. Kirby Co.,

and in 1905 and 1906, sold 50 per cent. of the output.

The court denied the application for a receiver on the ground that Mr. Kirby's financial condition is ample assurance of his ability to meet any claim against him that Mr. Rutherford may establish. An order was granted allowing Mr. Rutherford to examine all books and accounts.

Schedules in Bankruptcy Filed by M. Sternberg, Savannah, Ga.

SAVANNAH, Ga., July 16.—M. Sternberg, trading as M. Sternberg & Co., filed a schedule of liabilities amounting to \$46,907, with assets amounting to \$20,525, in involuntary bankruptcy proceedings, July 7. He claims a homestead exemption of \$1,600.

Following are the names of the principal creditors: State of Georgia and county of Chatham, for taxes due, \$109; city of Savannah, taxes and license, \$406; T. F. Johnson, \$575; Jacob Cohen, \$1,500; A. S. Cohen, agent, \$800; Weinman & Co., \$392; E. A. Cowan & Co., \$938; K. Marks & Co., \$810; Morris Sickels & Sons, \$118; Markowitz Bros., \$126; Wolfsheim & Sachs, \$205; H. Keck Mfg. Co., \$1,882; Rosenzweig Bros., \$153; S. Lazarus & Co., \$1,252; J. Ollendorff, \$600; Louis L. Grey & Co., \$234; H. Michelson, \$225; D. Gruen Sons & Co., \$355; Wallenstein, Mayer & Co., \$374; Empire Cut Glass Co., \$186; F. M. Whiting & Co., \$258; Fox Bros. & Co., \$380; *Morning News*, \$141; Mrs. J. Bell, \$600; Emma Muhlberg, \$10,685; Louis Muhlberg, \$5,800; Julius Rirsch, \$850; L. F. Cox, \$861; E. W. Sylvian, \$500; J. M. Rich, \$1,300; D. C. Foreman, \$100; Julius Kronkoff, \$138; Big Springs Distilling Co., \$595; J. & A. Frieberg, \$387.

Indorsed notes discounted by various banks amounted to \$10,745. The assets include stock, \$11,500; machinery, fixtures, etc., \$1,000; notes due, \$1,123; cash in hands of receiver, \$789; accounts good, \$1,000; accounts doubtful, \$5,000.

Death of C. W. McAllister.

Caldwell Warner McAllister, who had been at 49 Nassau St., New York, dealing in optical supplies, magic lanterns and stereopticons, under the style of Thomas H. McAllister, died Wednesday of last week in the Whittier cottage at Sea Gate in his 50th year. Death followed an operation for appendicitis.

Mr. McAllister was the son of Thomas H. McAllister, the original member of the old firm of McAllister & Bro., formed in 1853, which succeeded a business established in Philadelphia in 1793. In 1865 Thomas H. McAllister withdrew from the Philadelphia concern and came to New York, where he started the New York business. At first he manufactured and dealt in optical goods, to which he afterwards added microscopes, stereopticons, magic lanterns and other novelties. In 1879 the son, Caldwell W. McAllister, was admitted as a partner, the old style being continued.

Since the father's death in 1898 the son had conducted the business alone under the same style.

W. J. Brice, Green Bay, Wis., has started a retail business, but will continue to manufacture for the trade.

LETTERS TO THE EDITOR.

Congratulations on the Stamping Law.
New York, July 12, 1906.

Editor THE JEWELERS' CIRCULAR—WEEKLY:

At the last meeting of the Joint Committee of the Gold Bill it was unanimously voted that the thanks of the committee be extended to you for your valuable assistance in securing, by national legislation, a bill regulating the stamping of the gold product of the watch and jewelry manufacturers of the United States.

The committee realize that it is by reason of the principles that you have at all times advocated, and which are embodied in this bill, that are so just to all concerned, that the great difficulties that have always been met with in uniting the trade for a measure of this kind, have been overcome. It is these facts, and the most cordial co-operation of THE JEWELERS' CIRCULAR—WEEKLY, that made the victory possible, and thus secured for the trade a bill that we feel confident will meet with the approval of every honest manufacturer and retailer of jewelry in the country. For these reasons the committee most sincerely thank you for initiating the bill, as well as for your advice and assistance, in this very important matter.

Yours respectfully,

(Signed) HIRAM A. BLISS,

Chairman, Committee Federal Gold and Silver Stamping Law.

Virginia Legal Authorities Criticised.

DURHAM, N. C., July 11, 1906.

Editor THE JEWELERS' CIRCULAR—WEEKLY:

In the last issue of THE CIRCULAR—WEEKLY I notice what appears to be a most unjust criticism made against New York State's Governor by various citizens and officers of Virginia in regard to the case of John F. Kohler against W. B. Despard, who escaped in New York after he had been arrested on Mr. Kohler's complaint. In this case Mr. Kohler as well as the Governor of Virginia feels none too kindly toward the Governor of New York, owing to the fact that the authorities did not hold Despard sufficiently safe or long enough for the Virginia Governor to get him by requisition.

Now the writer has nothing to do with the matter referred to, and is unknown to Mr. Kohler, and while I wish the jeweler well in his efforts to get the man who robbed him, and like to see justice done, I would also like to call attention to the fact that the Virginia authorities are being "paid in their own coin" and receiving the same courtesy that officers of that State have offered to others in the past. I speak from experience, for I once had a similar case, where an employe who had robbed me of both goods and money took refuge in dear old Virginia, and I found that there he was as safe as if he had been in China. Though I was successful at last in getting him arrested in Virginia, the authorities did not see fit to hold him but for a few minutes and when the officers in this city got to Virginia the man was gone.

Their experience in the Despard case may serve to make the Virginia authorities more anxious to do the proper thing when a similar case arises within their jurisdiction.

NORTH CAROLINA JEWELER.

Our Traveling Representatives

John McCready, well known in the trade as a silverware salesman, has taken a position as traveling man on the New England circuit for Fred H. Woodman, Boston, Mass.

Henry Freund, of Henry Freund & Bro., New York, was in Buffalo, N. Y., Saturday, on his way to the west. He said that business is good for the midsummer season.

Among the traveling representatives in Lancaster, Pa., recently, were: George Weiss, Schwarzkopf Mfg. Co.; Mr. Green, W. Green & Co.; J. Schwartz, Schwartz & Co.; S. Stern, S. Stern & Co.

The following traveling salesmen have been calling on the trade in Kansas City, Mo., during the past week: Mr. Hopkins, H. P. Sinclair & Co.; Fred M. Thanhauser, Wolfshiem & Sachs; E. R. Bennett, Waite, Mathewson & Co.

Mr. Bernskin, Tutthill Cut Glass Co.; Abel King, I. Enrich & Co.; C. T. Barbour, Wm. Bens Co.; G. W. Harder, Niagara Cut Glass Co., and A. M. Thanhauser, Wolfshiem & Sachs, were in Omaha, Nebr., last week, calling on trade.

The following traveling salesmen have been in Savannah, Ga., recently: O. J. Sommer, J. J. Sommer & Co.; John W. Steele, Jr., C. G. Alford & Co.; O. K. J. Alcom, Irons Normandy Co.; H. E. Slater, Whiteside & Blank; H. Abraham, S. Cohn & Co.

F. Perry, representing the F. H. Sadler Co., Providence, R. I.; George V. Wade, Wade Mfg. Co., Dundas, Ont.; C. M. Woodburn, E. F. Walter & Co., Montreal, and Mr. Strauss, of Backus & Strauss, London, Eng., called on the Toronto, Ont., trade, this week.

Among the representatives of wholesale houses recently in Detroit, Mich., were: W. J. Lawrence, National Steel & Copper Plate Co.; George Schwarzkopf, Schwarzkopf Mfg. Co.; Chas. H. Keif; J. T. Griffith, Jr., Carter, Howe & Co.; Chas. E. Bride, Bride & Tinkler.

Traveling representatives who paid a visit to the Cincinnati, O., trade, during the past week, included: Ike Price, Louis Strasburger's Son & Co.; Mr. Hulm, Potter & Buffinton Co.; W. A. Moore, F. W. Gesswein Co.; Sam Zimmern, Henry Zimmern & Co.; C. A. Wilkinson, C. A. Wilkinson & Co.; W. Sumner Blackinton, S. O. Bigney & Co.; N. S. Benford, W. F. Upham.

Traveling salesmen in Boston during the week, included: Harry Lissauer, Jacobson Bros.; Mr. Laurino, Saunders, Meurer & Co.; Mr. Childs, B. A. Ballou; R. W. Simpson, Jr., Riker Bros.; Mr. Royce, D. C. Dodd; John A. Lasell, Unger & Christl; Mr. Perley, Perley Bros.; C. F. Duffy, Enos Richardson & Co.; Fred Hoyt, Hoyt, Obrigg & Geiger Co.; D. D. Brokaw; Mr. Sandberg, Bergstein & Co.; Mr. Brown, Carter, Howe & Co.

Optical Notes and Briefs.

The Berteling Optical Co. will soon move into its new store in the Cordes building, on Bush St., San Francisco.

G. H. Kahn, an optician, formerly of 105 Montgomery St., San Francisco, will soon be settled in a new store on Van Ness Ave., near Sutter St.

The Wollensak Optical Co., Rochester, N. Y., on July 7, gave a picnic at Grand View Beach, which was attended by 500 employes and many friends.

Arrangements are now complete for the annual convention which the American Association of Opticians will hold during the week of July 30 in Rochester, N. Y.

The Wisconsin Association of Optometrists held their sixth annual convention July 9-10 in Racine, and enjoyed a banquet given by the Milwaukee Optical Mfg. Co.

F. E. Luke, Toronto, Ont., has had his establishment, at 11 King St. West, completely remodeled and decorated. A private consulting room will be fitted up with modern instruments.

George H. Reynolds, of Winooski Park, Vt., recently returned from Philadelphia, where he had completed a post-graduate course in optics, and he has since opened optical parlors at 49 Church St.

John J. Bausch, head of the Bausch & Lomb Optical Co., Rochester, N. Y., was recently elected president of the Mechanics' Savings Bank, of which he has been a trustee for 30 years, being the oldest member of the Board.

J. C. Hutison, of the Hutison Optical Co., Omaha, Nebr., with his wife and children, will leave to-day for New York and Boston, to be gone a month. While in New York they will make their headquarters at the Hotel Navarre.

The Bentley Optical Co., 433 Main St., Springfield, Mass., has been sold to R. W. Morley, and will be conducted in connection with six other stores, now operating under the Morley system. The new management took possession last week, and Mr. Dodge, who has been connected with the Bentley Optical Co. since its inception, will act as local manager. Mr. Bentley, who will retain some stock in the new company, will retire from active management, and after a vacation will probably engage in the manufacturing business.

Providence.

A. O. Ostby, of the Ostby & Barton Co., and E. C. Ostby, president of the same concern, are both enjoying vacations. E. C. Ostby is in Europe and A. O. Ostby is in the Adirondacks.

Among the imports at the Port of Providence last week were 20 packages of imitation precious stones from Bremen, 2 of imitation precious stones from Havre and one of jewelry from Southampton.

A fireman passing the refinery of John Austin & Son Sunday morning saw smoke issuing from the building and turned in an alarm. The fire proved, however, to be in the furnace and the firemen were not needed.

Herman G. Possner, Albert W. Possner and Clinton W. Brown have incorporated as the Art Die Cutting Co., with a capital

stock of \$50,000. The president is C. W. Brown, A. W. Possner is the secretary and H. G. Possner is the treasurer. The Lange & Fischer Mfg. Co. plant, recently purchased by H. G. Possner, will be used by the firm.

Ex-Lieut. Gov. W. T. Wardwells' place in Bristol was the scene of a pleasant gathering Sunday when three men who served with him as apprentices in the jewelry shop of Sackett, Davis & Williams, 52 years ago, called on him to pay their respects and exchange stories of the times of years gone by. In the party were E. R. Jones, now in the police department; R. L. Griffith, well known in manufacturing circles, and Frank L. Dimond, a retired business man. Dinner was served by Mr. Wardwell and other pleasures enjoyed.

Columbus, O.

T. Mathison expects to leave in the near future for a three weeks' outing at Crab Lake, Wis.

Alvin Bonnet, secretary of the Frank F. Bonnet Co., has gone to Columbus Beach, Mich., for a two weeks' vacation.

John G. Gayman, secretary of the Hoffman Jewelry Co., accompanied by his wife, started Saturday for a visit at Niagara Falls and other eastern Summer resorts.

The State convention of jewelers of Ohio, to be held for the purpose of forming a State association, was not held yesterday, the date originally fixed. The Board of Trade has taken the matter up, however, and a later date may be selected.

Prof. George A. Rogers, of Chicago, who lectured before the Ohio State Opticians' Association recently, has opened a school in Columbus. With one other professor from his Chicago school he visits Columbus once a month, the remainder of the instruction being by mail. F. P. Barr, Lancaster, president of the Ohio association, also lectures occasionally before the school.

From the annual report of Referee in Bankruptcy Charles Rogers for the fiscal year ending June 30 it is learned that of the assets left by the officers of the defunct Merchants' Supply Co. but \$656.69 has been paid out in dividends, while fees, costs, commissions, etc., have amounted to \$2,570.80. This is the case in which after the company was forced into bankruptcy the officers immediately left the city and some goods and important books were missing from the office. Much of the cost bill is from an effort to locate these and untangle the business generally, many of the creditors having given consent to the expenditure of all the money due them in the case.

An attempt was made one night recently to break into the store of D. Leonheiser, Huron O. The burglar or burglars had started to cut the glass out of the front door, and finding that rather slow work, broke in one of the front windows. They were finally frightened away before securing any loot. A man was subsequently arrested near the Lake Shore flag station by Marshal Laboo, who released him upon finding no valuables in his possession. It is now believed that the released man was the culprit.

Canadian Stamping Law Not to Go Into Operation for a Year.

TORONTO, July 11.—The gold and silver stamping bill received its third reading in the Canadian House of Commons yesterday, having previously passed the Senate. It does not go into operation for one year.

The Hon. W. S. Fielding, Minister of Trade and Commerce, explained that while the general principle of the bill had received the support of both manufacturers and dealers, there was some difference of opinion as to details. For this reason it was considered advisable to postpone the time when it shall take effect, so that various interests may make representations and any necessary changes may be permitted at the next session of Parliament.

AMETHYSTS

THE POPULARITY OF THIS BEAUTIFUL VARIETY OF THE
QUARTZ FAMILY

HAS CREATED A DEMAND WHICH IS OUTSTRIPPING
THE SUPPLY.

New Stores and Enterprises.

F. X. Neuburger is a new jeweler in Spokane, Wash.

H. H. Turney recently began business in Claremore, I. T.

R. C. Bassett recently opened a jewelry store at Woonsocket, S. Dak.

Clarence Gordon has engaged in the jewelry business at Stroud, Okla. Ter.

Charles Ellis, of Menomonie, Wis., has started in the jewelry business at Elk Mound, Wis.

S. M. St. Johns & Co. recently began business in the Sanders building, on Main St., Dallas, Ga.

J. C. Larsen, of Taylor, Minn., has gone to Dodge Center, Minn., where he will engage in the jewelry business.

E. A. Wright, formerly with Millett & Stern, Lynn, Mass., has opened a jewelry establishment at Hartford, Me.

The Rocklyn department store of Davenport, Wash., has added a jewelry department to its list, and expects a shipment of goods this week.

Gilbert E. Tuttle, formerly with Mackenzie & Allen, Boston, Mass., and more recently in Conway, Mass., has established himself in business at Winsted, Conn.

M. Wohlfield has opened a new store in Massachusetts Ave., Indianapolis, Ind., with a stock of watches and jewelry, and will conduct an optical department in connection with his store.

Articles of incorporation were filed recently by the Swiss Dial Co., Waterbury, with a capital of \$2,000. The incorporators are Olga Wuest, Leon Schupbach and Chris Waremer, all of Waterbury, Conn.

The H. M. Stevenson Co. has just been incorporated to manufacture and deal in watches and jewelry with a capital of \$15,000. The incorporators are Arthur R. Jenkins, Louis E. R. French, Nelson S. Hallett, Buffalo, N. Y.

Oscar Caesar, Fort Henry, N. Y., will on Oct. 1 open a jewelry store at 470 Broadway, Saratoga, N. Y., in the premises now occupied by E. J. Vose. Mr. Caesar has had several years' experience in the business.

The Harvel Jewelry Co., Litchfield, Ill., was recently incorporated with an authorized capital of \$100,000. The following officers were elected: President, S. O. Harvel, Litchfield; vice-president, E. E. Burson, St. Louis; secretary, C. E. Randle, Mt. Vernon; treasurer, W. L. Wooster, Litchfield.

Jewelers Gold Bars Withdrawn and Exchanged at New York.

Week Ended July 14, 1906.

The U. S. Assay Office reports:
Gold bars exchanged for gold coin...\$1,195,740.90
Gold bars paid depositors..... 144,977.78

Total\$1,340,718.68
Of this the gold bars exchanged for gold coin are reported as follows:

July 9.....	\$16,416.81
" 10.....	5,171.33
" 11.....	82,560.65
" 12.....	117,835.34
" 13.....	36,750.77
" 14.....	

Total\$1,195,740.90

R. Wickman, Oakland, Cal., has admitted a partner in the business, and the firm style is now Wickman & Van Vranken.

News Gleanings.

Henry Peetz has discontinued his jewelry business in Davenport, Ia.

Robbers broke into Isaac's store, at Boone, Ia., on the night of July 6 and stole \$100.

S. J. Stieglitz, Crookston, Minn., has redecorated his store and made improvements.

W. F. Tetro, formerly of Waterbury, Conn., has bought out Herbert L. Gould, Florence, Mass.

The West Silver Co., Taunton, Mass., is setting up a new boiler to increase the efficiency of its power plant.

An electric illuminated sign was hung outside his store, last week, by Elmer J. Faust, 728 Hamilton St., Allentown, Pa.

Fred Horning, Hillsboro, N. Dak., has gone to Grafton, N. Dak., to take charge of the business of his uncle, G. W. Foogman.

F. Weiland, Pitzville, Wash., died recently at his home. He had been in poor health for some time, but his death came unexpectedly.

W. S. W. Blake, who recently opened with a stock of jewelry at 3 E. Superior St., Duluth, Minn., is arranging to enlarge his stock.

G. K. Claxton, dealer in antiques and Oriental jewelry, will soon occupy a store on Van Ness Ave., near Sacramento St., San Francisco.

R. L. White, Greenwood, S. C., will move his jewelry store into the room now occupied by Mrs. A. J. Sproles as a millinery store, Sept. 1.

D. D. Sullivan, Fargo, N. Dak., advertises that he will close out his jewelry business, owing to the increase of business in the optical department.

A loss of \$800 was caused in the jewelry store of E. Waldmeier, Gulfport, Miss., by a fire which destroyed an entire business block at that place.

The Moultrie Jewelry Co. and the Moultrie Book Store, at Moultrie, Ga., have been consolidated, and will occupy the same store on N. Broad St.

All the factories in the Robinson estate buildings, Attleboro, Mass., will be forced to shut down Saturday for a week for annual boiler inspection.

Jacob Gruesen, a jeweler of Duluth, Minn., recently received a painful bruise from a transom falling while he was attempting to adjust it.

At Woonsocket, R. I., jewelers have joined with merchants in other lines in an agreement to close Thursday afternoon during July and August.

At Fargo, N. Dak., robbers recently broke into D. D. Sullivan's jewelry store. A number of men were arrested on suspicion, but were afterwards released.

I. Goodman, of the North Western Jewelry & Supply Co., Butte, Mont., has bought the remainder of the stock of the Tuttle-Greene Jewelry Co.

C. E. Edwards has moved his store in Ames, Ia., to new and larger quarters. John Keiting, of Boone, Ia., will open a jewelry stock in the room vacated by Edwards.

Wm. F. Newhall, Lynn, Mass., has returned from an enjoyable pleasure trip to Mediterranean countries. He was in Venice

just subsequent to the Vesuvian eruption.

Two watches were stolen, a week ago, from the store of J. B. Dayton, Williamsport, Pa. Edwin O'Brien, a colored man, who was arrested for theft, was held in \$500 bail.

H. K. Lee has bought the interests of his brother, K. K. Lee, Fosston, Minn., and will return to his old business. He will devote much attention to the optical business.

Charles Fales, of Fort Pierre, S. Dak., has returned from the Twin Cities after completing a course in watchmaking and jewelry. He will engage in business at once.

The custody of the children was awarded last week by the court to Mrs. Celia Wyman, who had obtained a divorce from Henry W. Wyman, jeweler, at Colorado Springs, Colo.

George J. Schaeffer, Baltimore, Md., for three years at 133 S. Broadway, has opened a store at Broadway and Pratt St., where he has associated with his brother-in-law, Louis H. Addison.

E. A. Thielens, New York, who was for many years, beginning in 1858, in the jewelry business in Mattoon, Ill., recently visited that town, where he was cordially greeted by old friends.

Geo. E. Wills, Auburn, Me., was acquitted in proceedings recently began charging him with driving with his automobile upon a sidewalk and killing a Scotch collie belonging to a resident of that place.

H. J. Webb & Co., jewelers, and the Harvey & Lewis Co., opticians, both of 360 Main St., Springfield, Mass., will close their places of business at 5 p. m., except Saturdays, during July and August.

Charles Haechlin, Colgrover, Cal., who was formerly a jeweler at St. Louis, Mo., was burned to death July 8 in a fire in the stable on his vineyard. He retired from the jewelry business several years ago.

F. M. Watts, Kirksville, Mo., was recently found unconscious on the bank of a pond near that place. The doctor pronounced it a case of morphine poisoning, and said that Mr. Watts would recover.

What remained of the stock of the Tuttle-Greene Co. was recently bought by I. Goodman, manager of the Northwestern Jewelry & Supply Co., Butte, Mont. The Tuttle-Greene Co., which was incorporated in 1901, went out of business in May, 1905.

Charles A. Fricker, of James Fricker & Bro., Americus, Ga., is at Hot Springs, Ark., where he is taking the baths and receiving treatment. He is accompanied by his wife, and expects to remain at the Springs until the latter part of August.

Included in the exhibition given during the week of July 9 by the Arts and Crafts Society, Dearfield, Mass., was a collection of work in engraving executed by Mrs. Agnes Wymne, and of jewelry and necklaces by Miss Madeline Gale Wynne and Miss Putnam.

The F. B. Rogers Silver Co. has, through Treasurer Arthur H. Williams, filed with the secretary of the Commonwealth of Massachusetts the following annual corporation report: Cash and debts receivable, \$124; profit and loss, \$49,876; capital stock, \$50,000.

Creditors of the M. E. Moore Bronze &

Plate Co., Kingston, N. Y., will meet next Monday at 10 A. M. in the office of Amos Van Etten, referee in bankruptcy, 22 Ferry St., Kingston, N. Y., for the purpose of passing upon the final report of the trustee and declaring a final dividend.

Le Roy Jones, a colored man, was arrested last week on the charge of stealing a watch valued at \$55 from the Paul store, Norfolk, Va., where he was formerly employed as a porter. It is said that he grabbed from the show case the watch, which was afterward found in Leviten's pawnshop.

Frost & Lyle, Lowell, Mass., have dissolved their co-partnership by mutual consent, Charles H. Frost retiring in order to enjoy rest and freedom from cares of trade in his advancing years. The business was established 28 years ago. J. Edwin Lyle, who has been a member of the firm for 13 years, will continue the business in his individual name.

At Eaton Rapids, Mich., the Business Men's Association is making arrangements with a company which is to manufacture self-winding clocks in that city. The proposition is for the association to donate \$15,000, and a site containing 10 acres of land. The company is then to build a factory with a capacity for employing 150 men. The names of the clock manufacturers have not been made public.

Charles T. Prescott, of Austin & Prescott, Batavia, N. Y., has bought the Clark building, at 92 Main St., in that village. Mr. Prescott has been in the building which he has just purchased more than 30 years. When he was only 16 years old he went to work there for Jerome B. Clark. When Mr. Clark died Mr. Prescott and Mr. Austin bought the business. There has been a jewelry store there since 1830. Austin & Prescott have occupied the store over 20 years.

Joe Eplan, pawnbroker at Atlanta, Ga., is accused of larceny as a result, it is said, of making a mistake in giving out pledged jewelry to the wrong persons. A man who pawned the jewelry was arrested in Montgomery on the charge of larceny. Before the trial a woman called on Eplan and, claiming that she was the rightful owner of the property, took it away with her. The charge of larceny against the man who had pledged the jewelry was not sustained. He transferred the pawn ticket to W. Baker, who caused the pawnbroker's arrest. The case is to be tried in a few days before Justice Landrum.

Wolfsheim & Sachs are now comfortably settled in their new store, 35 Maiden Lane, New York, and perhaps no more efficient stock system prevails than has been originated by this concern since the removal to the present location. A series of shelves and drawers, cased within handsomely finished oak panels, each numbered and classified, admits of finding a particular style or class of stock at a moment's notice. The show room and office, apart from the store, are attractively arranged and fitted up. The show window is illuminated with an electric reflector of modern construction, and altogether the new home is a decided improvement over the former, in both capacity and equipment.

GORHAM SILVER

DESK FURNISHINGS.

¶ The ever-increasing demand by people of taste and refinement for desk furnishings of solid silver has led the Gorham Company to pay special attention to the designing and manufacturing of attractive desk-sets of every description and degree of elaboration.

¶ These sets are adapted for the use of both men and women and include every article which can find a fitting place upon the desk or the writing-table. Ink Stands, Paper Racks, Blot- ters, Pen Racks and Holders, Paper Cutters, Calendars, Erasers, Paper Knives and Desk Pads may be had either separately or in appropriately arranged sets.

¶ To this popular line the attention of the Jewelry trade is particularly directed.

Stamping Legislation by State and Nation.

OWING to the great number of inquiries upon the new Federal Law regulating the marking of the quality of gold and silver, which have been received by THE CIRCULAR-WEEKLY from retailers, wholesalers and manufacturers, both in the jewelry and other trades, we again call the attention of our subscribers to the fact that the new law has no provisions making it compulsory to stamp the quality upon any article made of the precious metals. It provides essentially that when the quality is stamped on an article, and the article is shipped in interstate commerce, the article must assay up to the stamp, within the limitations provided by the law in question. In other words articles of low grade gold, silver, or plate, bearing no marks that would indicate to the purchaser that they were of a particular quality of precious metal may be made and sold with impunity, but if the article is marked, the quality of the gold and silver therein must come up to the standard provided by law, or the seller or shipper in interstate commerce will be amenable to the Federal Statutes.

The law does not go into effect for a year after its passage, this having been done at the request of manufacturers who wish to have some time to adjust their business to meet its provisions. This consideration was undoubtedly given to their demand because the law essentially affects the manufacturer and wholesaler and not to any extent the retail jeweler, as it applies only to goods shipped in interstate commerce. That it will do much to stop the sale of spurious goods even within a State is evident from the fact that the jewelers and other dealers of but few States will be able to obtain goods that have not been shipped in interstate commerce and therefore have not become amenable to the provisions of the law at some time.

To absolutely protect the trade and public from all chances of fraud in the marking of gold or silver, the national law should be supplemented by State laws in all those commonwealths which to-day have no special provisions in their Penal Codes for the punishment of the man who sells or makes improperly or spuriously marked gold or silverware. While the States of New York, New Jersey, Massachusetts, Pennsylvania, Illinois, Ohio, Connecticut, Virginia, South Carolina, Rhode Island, New Hampshire, Missouri, Michigan, Maryland, Maine, Florida and Arkansas have statutes more or less broad regulating the sale and manufacture of improperly marked silverware, but three States—New York, Connecticut and Pennsylvania—have any statutory provisions relating to gold marking. That of Connecticut provides that all articles of gold must be marked, while that of New York and Pennsylvania compel no marking but provide that where the mark is placed on the articles it must assay up to the standard indicated, as defined by the statute.

It will be seen therefore that good work can be done now and in the future by the retail jewelers' associations that have been formed in the various States of the union, in connection with the question of State stamping legislation. In fact there are few more important subjects which a State

body and perhaps the national association can take up than the formation of State laws on gold and silver marking that will supplement the Federal Law in a way to make legislation on the subject uniform throughout the Union. There is little doubt that the legislatures of all States will give heed to the demand of the jewelers for any bill of this kind that will be in line with the Federal Law already enacted and merely extend the prohibitions of the latter beyond the manufacturer to the seller of spurious wares. It is pleasing to note that at nearly every convention of retail jewelers held recently the stamping legislation already enacted has been heartily endorsed, and the movement to continue the fight for perfect laws of this kind will doubtless meet with general approval.

Jewelry Failures During June and Second Quarter.

THE general condition of business as indicated by the commercial failures during the first six months of the year ended June 30 was distinctly good. Commercial failures of all kinds numbered about 5,600 during the first half of 1906, as against about 6,200 in the first half of 1905, though the amount of the liabilities was somewhat larger this year than in the former period. Distinct improvement was shown in the statistics of manufacturing insolvencies wherein both the number and amount of liabilities greatly decreased, as compared to the figures of the first half of last year. For the second three months of the year the comparison in both manufacturing and trading lines is greatly in favor of 1906 both in number of failures and in the liabilities, as will be seen from the fact that 568 manufacturing failures were recorded in the second quarter of this year with liabilities of \$8,957,000, while 650 were recorded in the same time last year with liabilities of about \$11,400,000; and 1,838 trading failures occurred during the second quarter of this year with liabilities amounting to \$11,457,000, while 2,049 were recorded for the second quarter of 1905, with liabilities of \$12,557,000.

As far as the jewelry trade is concerned, the number of insolvencies during the second quarter of the year and the month of June are gratifyingly low. In the three months ended June 30, but 43 failures were recorded, with liabilities of \$452,662, or an average of \$10,527. According to the table of failures by branches of business compiled for *Dun's Review* there were 49 failures in the same period of 1905, with liabilities of \$650,246; 58 failures in 1904, with liabilities of \$278,107; 44 in 1903, with liabilities of \$318,219, and 46 in 1902, with liabilities of \$867,341. According to the same authority there were 13 failures among jewelry and clock dealers last month, with liabilities of \$77,237, or an average of \$5,941, as compared with 20 failures in June, 1905, with liabilities of \$119,431; 10 failures in 1904, with liabilities of \$71,982; 13 failures in 1903, with liabilities of \$41,679, and 18 failures in 1902, with liabilities of \$495,323.

Jos. Mayer & Bros., 359 Colman Building, Seattle, Wash., have increased their capital stock to \$200,000.

Diamonds Wanted!

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

43 Rue de Meslay, PARIS Telephone, 2188 Cortlandt 17 Maiden Lane, NEW YORK

Do you always get perfect stone setting?

Did you ever lose a sale because your customer wouldn't wait till you could get the stone set?

Do your customers ever complain that points on their rings catch?

Did your setter ever chip a stone in getting his points down?

Then you need the **Arch Crown Mounting** with completed bearing, the only mounting ready to set.

The bearings and tips are fully completed, and it is only necessary to bring over and press down the tips. If the stone doesn't fit exactly, bend the arches in or out a little. That's all.

The tips are perfectly rounded and all are exactly the same size and shape. It's difficult to obtain such perfect setting in the old way.

Send for a sample on memo. if you wish, and try it **YOURSELF.**

ARCH CROWN MFG. CO.

26 Camp Street, Newark, N. J.

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is cordially invited to copy.

Newark.

M. W. Boyle, Broad St., reported to the police that an attempt had been made to rob his jewelry store Monday night of last week, but the intruders were frightened away by people living upstairs.

On the charge of swindling people by selling for \$6 and \$8 fraudulent watches a man giving the name of Andrew Burdell was arrested last Wednesday in Elizabeth. On his refunding the purchase price to complainants, Burdell was allowed to go by Judge Mahan.

Wm. C. Finck, of the Wm. C. Finck Co., Elizabeth, is one of the incorporators of the New Process Construction Co., which is to manufacture a new kind of artificial gas. The company has a capitalization of \$15,000, and is to supply the gas for the purposes of light, heat and power. Mr. Finck, who is the inventor of the process, says the company will begin by making small gas plants for private houses.

Reappraisal of Clocks.

The following reappraisal of an importation of clocks was announced last week, by the Board of United States General Appraisers, New York:

Clocks from Uhrenfabrik Villingen, A. G., Villingen, exported April 11, 1906, entered at New York (File No. 39827); findings of Fischer, G. A., No. 4287, gelwerk bez, No. 06842 75, bilder klocken, entered at 2.40 marks each. Freight and packing included. Reappraised at 2.296 marks each, net, packed.

Taylor Bros., Houston, Tex., last week caused the arrest of H. B. Ruch, on the charge of obtaining a diamond ring costing \$80 by false pretenses. It is charged that Ruch represented himself as an employee of a prominent real estate firm, and obtained the ring as a present for his wife, promising to pay the first instalment of the purchase a couple of days later. Though making no payment, it is charged, he pawned the ring for \$20.

New York Notes.

A fire caused a loss of \$125 to the stock of Henry Horowitz, 547 Broadway, Brooklyn, last Saturday.

Judgment for \$612 against Joseph Myers, and in favor of Fera & Kadison, 65 Nassau St., was docketed last week.

Edwin S. Simons, of Simons Bro. & Co., 13 Maiden Lane, is spending two weeks' vacation with his family in Canada.

S. Gans, of D. Lisner & Co., 140 Fifth Ave., arrived from Europe on Tuesday of last week, on the *Kaiser Wilhelm II*.

E. F. Keller, of Keller, Becker & Co., 51 Maiden Lane, left, last week, for a trip to Europe, on the *Kaiser Wilhelm der Grosse*.

Joachim Spiro, of Spiro & Hirsch, 65 Nassau St., accompanied by his family, left, recently, for their vacation to be passed in the Catskill Mountains.

A reward of \$500 is offered by Tiffany & Co. for the return of a string of pearls with a diamond clasp, lost between the Hotel Astor and Staten Island.

Reuben Mason, the vice-president of the Potter & Buffinton Co., and Mrs. Mason, have returned from a trip to Delaware Water Gap, where they enjoyed some good bass fishing.

Bernard Citroen, of Paris, against whom the government recently brought a suit to recover \$110,335 in customs duty on a necklace of pearls, has retained Alton B. Parker as counsel.

A. Eastwick Wood, representing Theodore W. Foster & Bro. Co., has been passing a few days with his wife and family at Asbury Park, N. J. He starts this week on his southern trip.

The friends of Charles H. Norton, advertising manager for Geo. Borgfeldt & Co., will be agreeably surprised to hear that he is to become a Benedict, Miss Adele Eddy Black being the young lady in the case.

A window smasher pitched a brick through the front glass window of Kahn & Co., 194 Broadway, some time during Monday night of last week, and stole eight pairs of pearl-handled opera glasses, valued at \$40.

Officers of J. Sheidig & Co., 50 Maiden Lane, were elected at the first meeting, recently, held by the corporation, as follows: Stephen Sheidig, president; John Sheidig, vice-president; W. A. Wirth, secretary and treasurer.

The Manhattan Watch Distributing Co. was recently incorporated with an authorized capital stock of \$100,000. The names of the directors are: A. Bruno, Brooklyn; F. C. Wheeler, New York; W. H. Osborne, Newark, N. J.

Jewelry valued at \$500, was taken by customs inspectors from the baggage of M. Witsma, of St. Louis, Mo., a passenger on the liner *Ryendam*, which arrived in New York on Tuesday of last week. The articles were sent to the public stores.

Incorporators of the Zaiden Coin Clock Corporation, recently formed, are Davis Zaiden, Estratius Glorgiddi, Morris Metzler and George S. Wheeler, all of New York. The company is to manufacture patented clocks. The amount of authorized capital stock is \$25,000.

Burnett Y. Tiffany, son of the late

Charles L. Tiffany, is to have an income of \$1,500 a month allowed him by the executors of his father's estate. He tried to get \$50,000 a year. The Appellate Division of the Supreme Court at New York last week sustained a decision of Surrogate Fitzgerald, which upheld the action of the executors.

At the regular monthly meeting of the directors of the Jewelers Board of Trade, held July 12, the following firms were unanimously elected to membership: Bates & Bacon, Attleboro, Mass.; Robert Gatter, New York; Hub Optical Case Co., East Dedham, Mass.; G. A. Veeck, New York; West, White & Christie, Pittsburg, Pa.

Supreme Court Justice Truax last week rendered a decision in the case of the heirs of the late Ashley A. Vantine and the executors of his estate against the firm of A. A. Vantine & Co., dealers in Oriental goods at 879 Broadway, in which he denies the right of the heirs to prevent the company from using the name of Vantine.

P. A. Tower, the head of the Tower Mfg. & Novelty Co., 306 Broadway, recently gave a dinner in honor of Robert L. Lomas, Jr., who had resigned the office of vice-president and secretary, after an association with the company covering a period of more than 30 years. His friends presented to him a silver loving cup, a handsome silver and horn mounted cane, and an umbrella.

A story was published in a New York paper Monday in relation to the sale by a Paris jeweler of a pearl necklace to John D. Rockefeller. It was said that the jeweler took his best pearls to show to the American, and on exhibiting his finest necklace was almost afraid to ask \$100,000 for it. The head of the Standard Oil Co., it was said, abruptly ordered three necklaces of the same kind for \$300,000. The story is not believed.

The International Gem Co., Inc., has begun business at 12 John St., as lapidaries and importers. Horace A. Dwyer, the president, was for 11 years with Tiffany & Co., and for nine years with Garraud & Griser; the secretary and treasurer, Henry Casanova, was for 12 years with Tiffany & Co. H. O. Dreher, vice-president, was for two years with Shreve & Co., and for 12 years with Tiffany & Co. Besides cutting and polishing, the company is prepared to turn out special lines of work in drilling, engraving and slitting.

In a decision by W. B. Howell, the Board of United States General Appraisers ruled, last week, that decorated china from S. Tamai and K. Suzuki & Co., of Kobe, Japan, was heavily undervalued. The Board advanced invoice values 25 per cent., which with the accruing penalties bring the total advances up to 50 per cent. The merchandise consisted of fancy dishes, umbrella stands, vases, and berry sets. The Board required the importers of cloisonne vases from K. Sugawa, Kobe, to pay advanced duties amounting to 25 per cent.

Two more women, last week, complained to the Brooklyn police that they had been swindled of diamond earrings by men who exchanged for these articles glass imitations. In these, as in other cases, previously reported, glib-tongued strangers approached the women and exhibited earrings having large paste stones, which were rep-

resented as real diamonds. Mrs. Sophia Tannebaum, 104 Seigel St., said that she had exchanged a pair of earrings costing \$175 for worthless imitations. On her complaint, Samuel Greenbaum and Isaac Rosenberg, neither of whom would give his address, were arrested, and were held in the Manhattan Ave. Court in \$2,000 bail. A second complaint against Rosenberg was made by Mrs. Pauline Jacobs, 91 Marcey Ave., who parted with a pair of earrings, which, she says, were worth \$100, and also gave \$60 in cash in exchange for imitations worth a few cents.

James McGraw, who says that in old days he used to rob jewelry stores, banks, and hotels, called, one night last week, in the office of the *New York Sun*, and related his experiences to the extent of a column and a half, which was published the following morning. McGraw, who is now 51 years old, and has passed a large share of his life in prisons, said one of the first robberies in which he engaged, was in a jewelry store in Denver, where his gang took away stock to the value of \$12,000. In speaking of hotel robberies in the western cities, a number of years ago, he said that it was the practice of thieves to take only money and precious stones. The stones, he said, were sent to a fence in New York, the man being still alive. Watches were never taken, because sentimental attachments sometimes spur the owners to get them back at any cost. The old-time robber said that during much of his career, the thieves, with whom he was associated, acted in agreement with the police, dividing spoils. Nowadays he said, little of this is done, and the police are more honest than formerly. As for himself, he said, he had determined to live honestly for the remainder of his life.

Reports have been published in the last week in daily papers to the effect that the insurance companies are quite generally withdrawing their burglary policies. One report was that because of the prevalence of burglaries in Manhattan most of the companies would refuse to issue any more policies here. Another paper said that the companies have lost much less from the activity of burglars than as a result of the dishonesty of persons taking out policies, or the relatives of such persons. Interviews were given with officials of companies detailing experiences in which the companies were obliged to pay for losses when there were no real burglaries. The form of the policy was said to be almost an invitation to dishonesty in the case of persons inclined that way. Inquiries made by a reporter of THE JEWELERS' CIRCULAR-WEEKLY at the offices of the companies elicited the information that about the only withdrawal from the field of burglary insurances is on the part of the United States Fidelity & Guarantee Co., which is said to carry most of its business in this line outside of Greater New York. As far as can be learned, jewelers and other business men who desire burglary insurance are finding no unusual difficulty in getting it.

A man went into the store of Harry Zimmerman at 390 Columbus Ave., Monday, and, saying that he was a butcher up the street, whose name he gave, picked out a

are sold only to the legitimate jewelry trade. Jewelers who handle them do not have to meet the competition of Department Stores or Retail Mail Order Houses.

The adoption of this policy is the result of a vote of the directors of the W. & S. Blackinton Co. to protect the rights of the retail and jobbing jewelry trade. In declining the trade of department stores we close many large accounts. However, we are convinced that this policy of protection to the retail jeweler and jobber will work to their best interests, as well as our own.

(Continued from page 59.)

couple of clocks to hang up in his market. Then he said he wanted to get a \$50 bill changed because a customer was waiting for it at the store. When Zimmerman said he couldn't change it, the purchaser said he wanted to borrow \$5 in change long enough to go back and square up with his customer. Zimmerman let him have the money, and then he grew suspicious. When the man tried to board a street car the jeweler overtook and arrested him. In the West Side police court a stationer said that the prisoner had obtained \$5 from him by means of the same trick a week ago. The prisoner, who said that he was Abraham Worthenschlag, 41 years old, was held in \$1,000 bail.

Machinery, office fixtures, furniture and sales of Schekerling & Co., bankrupt jewelry manufacturers, at 28 E. 22d St., New York, were sold at public auction last week for \$3,196. The auction was under the direction of Robert S. Morris, the trustee in bankruptcy.

Louis J. Gallaher, 356 Franklin Ave., Brooklyn, last Friday caused the arrest of Albert J. Bulger, on the charge of stealing watches and diamonds to the value of \$1,000. The complainant said that he had entrusted the merchandise to Bulger to sell.

Victor E. Benz, 51 Maiden Lane, has just returned from his vacation trip, which was spent aboard his private launch. He made several cruises along the New York coasts. R. E. Linnert, Charles Reitz and Joseph Landsann, jewelers in the same building, and also H. S. Deutch, of Hammel, Riglander & Co., were his guests for several days.

In the case of Joseph and Morris Klein, of Klein Bros. & Co., the bankrupt manufacturing corporation at 51 Maiden Lane, an application was made recently in the Court of General Sessions by their attorneys for a reduction in the amount of bail in which they are held to answer to eight indictments accusing them of grand larceny. A representative of the district-attorney's office opposed the application, saying that \$25,000 is not excessive, considering the nature of the charges. The court denied the application, but said that the district-attorney must give the prisoners a trial at as early a date as possible. The assistant district-attorney said that he could not bring the case to trial before the middle of August. The Kleins, in default of bail, were then remanded to the Tombs.

United States Commissioner Alexander was notified last week that the Treasury Department has denied the petition of Norman C. Hascall, of Jacob J. Freeman & Co., Toledo, O., to return to him the diamond brooch seized by a customs inspector on his return from Europe last year. The brooch had been for years the property of Mr. Hascall's wife, and the seizure was made because of a resetting of the stones in Europe. The case will now go to the courts, it is expected, on the question of forfeiture.

Detectives arrested last Wednesday a young man, giving the name of James Spellman, on the charge of being implicated in the robbery, in March, 1905, of jewelry

to the value of \$50,000 from M. Glattauer, of Glattauer Freres, Paris. The details of the robbery were published in THE CIRCULAR-WEEKLY, April 12, 1905, and another account appeared in the issue of Dec. 13 of the same year, when a portion of the missing property was found in New York pawnshops. Mr. Glattauer was followed by the thieves from this city, he believed, to Birmingham, Eng., where the robbery took place. On his arrest Spellman said that he was an engineer living at 18 Thames St., Brooklyn, and he denied having anything to do with the robbery. He was released in the latter part of the week, the police saying that the London authorities do not desire to extradite the man.

Trans-Atlantic Voyagers.

TO EUROPE.

E. F. Keller, of Keller, Becker & Co., New York, sailed last week on the *Kaiser Wilhelm der Grosse*.

Emanuel Arnstein, of Arnstein Bros. & Co., New York, and Mrs. Arnstein, sailed July 3 on the *Kronprinz Wilhelm*.

Christian Dorflinger, of C. Dorflinger & Sons, New York, and his grandson, Dwight C. Dorflinger, sailed recently on the *St. Louis*.

Herbert Cooper, of the Cooper Diamond Co., New York, accompanied by his wife and daughter, will sail Saturday on the *Campania*.

Albert F. Strasburger, manager of Wanamaker's jewelry department, New York, sailed recently on the *Philadelphia*.

J. Bernstein, New York, sailed last week on the *Kronland*.

John Frankel, of Joseph Frankel's Son's Co., New York, sailed recently on the *La Provence*; also on the same boat were C. Goldsmith, of the Steel & Taylor Co., New York, and Mrs. Goldsmith.

FROM EUROPE.

Newton H. Rogers, of Hayden W. Wheeler & Co., arrived recently on the *St. Paul*.

C. F. Wood, of Chas. F. Wood & Co., returned Saturday on the *Kaiserin Augusta Victoria*.

Alvin L. Bauman, the president of the L. Bauman Jewelry Co., St. Louis, Mo., will sail Friday on the *Amerika* from Cherbourg.

A. F. Lowenthal, New York, returned last Tuesday on the *Kaiser Wilhelm II.*; also on the same boat S. Gans, of D. Lisner & Co., New York.

Bankruptcy Petition Filed Against Ernest J. Leben, Americus, Ga.

AMERICUS, Ga., July 16.—An involuntary petition in bankruptcy was filed last week against Ernest J. Leben, who has been in business here less than two years. The usual allegations as to insolvency are made by the creditors. No statement as to his assets and liabilities has been made public.

He was formerly a member of a firm at Jennings, La. When he came here he leased part of a store occupied by a bric-a-brac concern, which he later bought out in order to protect the lease. The additional liabilities proved too heavy a strain for him, it is understood.

Philadelphia.

F. W. Trewin, of the Keystone Watch Case Co., is at his home, seriously ill.

Charles Taney, 728 Chestnut St., is spending the Summer with his family at Wildwood, N. J.

A. L. Smyth, formerly of South St., has moved into his new store at Fiftieth St. and Baltimore Ave.

Albert Sauter, of F. Sauter, 2709 Girard Ave., has taken his family to Doylestown, Pa., for the balance of the summer.

Karl Kemper, Third and Poplar Sts., is receiving the sympathy of the trade upon the death last week of his infant son.

Carl Stratton, watchmaker, formerly with H. H. Knerr, Camden, accepted a position last week with Strawbridge & Clothier.

Alie Sickles and Ed. Sickles, of M. Sickles & Sons, spent a few days in New York last week buying goods for the Fall trade.

F. B. Wallen, one of Camden's most prominent retailers took his family to New York last week, where they will stay until August.

Charles Hamer, watchmaker, formerly with C. R. Smith & Sons, accepted a position last week with the Bailey, Banks & Biddle Co.

J. E. Caldwell & Co. were awarded the contract last week to furnish the prizes and trophies for the annual bowling tournament of the Schuylkill Navy.

The thief who robbed the retail jewelry store of W. A. Patterson, 1149 S. Twentieth St., was recently tried, convicted, and sentenced to jail.

H. Garman, Coatesville, Pa., admitted to partnership last week his son, who has been identified with the business for some time. The firm name will hereafter be H. Garman & Son.

Julius Windner, manufacturing jeweler, 717 Sansom St., lost an envelope last week containing 10 small diamond rings, in the heart of the city, and he has since offered a liberal reward for the return of the rings.

William Gibbons, 4030 Market St., has returned from a vacation of several weeks in the mountains. He will superintend the opening, shortly, of his new store on Fortieth St. south of Market St.

J. Walter Hazelton, with Charles H. O'Bryon, 735 Sansom St., who has been ill from injuries sustained in a fall following an attack of vertigo, returned last week to business completely recovered.

Mrs. A. Hassler, who for about half a century has conducted a retail store at 3418 Market St., during which time she has come frequently before public notice as the victim of thieves, sold out her store last week to Emil Moskovitch. Mrs. Hassler will retire from business.

Simon Reese, a young man who is charged with having robbed Joseph H. Deschamps, Seventh and Chestnut Sts., of \$1,200 worth of diamonds last April, was landed in a cell in this city last week and now awaits trial. Reese was a friend of Mr. Deschamps and stole his diamonds while he had free access to the establishment. After the robbery he fled to London, where he was captured. A detective from this city was sent to bring him home.

Ball's Official Standard R. R. Watches

WHAT WOULD YOU GIVE FOR A LIFELONG CUSTOMER?

Try this plan:

Sell your next watch customer a "Ball."

Its reliable performance will convince him you are a dealer to be depended on—he'll keep coming back for other things.

The watch will win you his business and friendship for always.

Write for booklet, and watch this space.

We want to add a lot of new friends to the Ball family of railroad watch dealers.

CHICAGO, WEDNESDAY, JULY 18, 1906.

No. 24.

Chicago Notes.

L. H. Shafer is spending his Summer vacation at Cleveland.

R. L. Jenkins is about to remove from Kewanee, Ill., to Amboy, Ill.

Paul Braude, of Emil Braude & Co., is out on a trip through Illinois.

Edward Lehman, of the Edward Lehman Jewelry Co., Denver, was here recently.

Wm. Barker, Jr., has started on a trip to the coast for R. Wallace & Sons Mfg. Co.

A. F. Smith, Omaha, Nebr., visited the Chicago trade for a day on his way east.

W. H. Peters and W. V. Ghislin, of the Gorham Mfg. Co., are now on their vacations.

E. A. Dorrance, with Simons, Bro. & Co., is occupying his Summer cottage at Antioch, Ill.

O. A. Starke, manager of the Star Watch Case Co., spent a few days of last week in this city.

George Kehl, of Frank H. Noble & Co., is back from his coast trip, and reports good business.

Fred H. Allen, of D. Wilcox & Co., is occupying his new Summer cottage at Long Lake, Wis.

E. Hewitt Griffin, optician, until recently located at 833 W. Congress St., will remove to Kincaid, Kans.

A. W. Sproehnle, of Sproehnle & Co., is off for a sojourn of a month or so among the northern lakes.

A. B. Paulsen is enjoying a vacation and adding to his stock of fish stories at Lauderdale Lake, Wis.

C. E. Child, of the C. M. Robbins Co., has just returned from a successful trip to Denver and the northwest.

Robert Wilson, with Stern Bros. & Co., and Sam Block, with Lyon Bros., are on a vacation to Eagle River, Wis.

Paul W. Serwich, Joseph C. Wilson and J. M. Hedden have started on their western trips for Wm. A. Rogers, Ltd.

George H. Spies, of Spies Bros., with S. C. Spies and wife, are making a short automobile trip through Wisconsin.

E. C. Wineburgh, L. Seligman and J. J. Wechter will start on their Fall trips this week for the L. Seligman Jewelry Co.

R. J. Hillinger, who has been in the northern woods for the past week, reports an excellent catch of bass and muscullonge.

J. M. Poole and J. N. Lane, of the American Silver Co., start on their western trips this week. Mr. Poole goes to the coast.

Sylvan L. Basch and Miss Irene Hirsch were united in marriage Wednesday last. The couple are now on their honeymoon.

E. D. Barnum, of the Chicago office of the Ansonia Clock Co., is on a pleasure trip through Canada and the east. He will be gone a month.

Dr. Warner, of Warner & Co., Mangum, Okla., was in Chicago recently selecting stock for his jewelry department. He was accompanied by Mrs. Warner.

R. O. Kandler is still in Germany in the interest of his school of engraving and designing. He proposes to visit the art centers of Europe before his return.

Louis Finkelstein, St. Paul, was in Chicago during this week, selecting a complete new stock on account of the fire of last month which totally destroyed his premises.

George N. Strawn, of E. A. Dayton & Co., recently made a business trip through Illinois and Iowa. He reports that crops in these sections never looked more favorable.

C. J. Williams, of A. L. Williams & Co., is on a vacation on a farm in the west. A. J. Williams, of the same firm, has now returned from his wedding trip through the east.

Clarence Woods, of the material department of C. H. Knights & Co., met with a severe accident in a bicycle race recently. He was confined to his home for a few days.

W. R. Stevens, the western manager of the Bay State Optical Co., is making a visit to the factory at Attleboro. He intends stopping at the meeting of opticians at Rochester on his return.

J. M. Stanley and Julius Mayer, representing the Mauser Mfg. Co. and S. Sternau & Co., will soon start on western trips. Mr. Stanley will go to the coast, and will be accompanied by Mrs. Stanley.

Frank T. Barton, who has just returned from a Pacific Coast trip, goes east this week, his principal objective point being his native city of Providence, R. I. Mr. Barton reports good business on the coast.

J. R. Parsons, the well-known founder of Parsons' Horological School, now of Jessup & Sons, San Diego, Cal., has been making a visit to Chicago for some days.

He returned to San Diego the latter part of last week.

George P. Marshall, with E. V. Roddin & Co., combined a vacation and a wedding trip all in one. Mr. Marshall has now returned to his desk in the Heyworth building, and his friends say that his smile is even more genial than ever.

Fred Spies, of Spies Bros., who has been confined to a hospital for over four months, is now reported doing well, with the prospect that he will be back at his desk this Fall. At one time it was considered doubtful if Mr. Spies would recover at all.

The partnership of Woollett & Jacob, which was formed two years ago, has been dissolved, John Woollett retiring from the firm. Ed C. Jacob will continue the business in the present quarters at 103 State St. The dissolution dates from July 14, and Mr. Jacob assumes all obligations of the old firm.

The estate of M. Lippert, who was a traveling jeweler, and who died in the latter part of April, this year, intestate, is being administered in the office of James Reddick, Public Administrator. A complete appraisal of the stock has not yet been made, but it will probably reach \$7,500. It would appear that all claims will be paid in full.

M. Bazzett & Co., whose offices were at 311-313 Wabash Ave., have sold their entire business, including stock, fixtures and leasehold to the American National Jewelry Co. for \$12,750. The retiring firm will close up all their book accounts and pay all outstanding obligations. M. Bazzett, who has been the leading spirit in the old firm, will remove to Seattle, where he will represent a line of china and glass ware. The American National Jewelry Co. started in business two years ago with offices in the Schiller building. Victor H. Brownscombe is secretary of the company and its manager.

Among the buyers in Chicago during the last week were the following: Adolph Hapke, Newman, Ill.; R. A. Woodward, Sandwich, Ill.; E. Raines, Denver, Colo.; W. D. Nelson, accompanied by Mrs. Nelson, Pierre, S. Dak.; Mr. Hanson, of the Hanson Jewelry Co., Princeton, Ill.; G. W. Flanders, Three Rivers, Mich.; M. Hainer, McComb, Miss.; Harry Dixon and wife, North Platte, Nebr.; C. A. Larson, Cedar Falls, Ia.; Dr. I. T. Gabbert, Caldwell,

To the Jobbing Trade.

Quality, workmanship and desirable styles you want, at popular prices, we have them in

Diamond Mounted Jewelry and Mountings

Kans.; M. Bigwood, Evansville, Ind.; A. Rovelstadt, Elgin, Ill.; S. D. Wones, Hiawatha, Kans.; M. Feinberg, Ironwood, Mich.; A. Weibking, Garden Prairie, Ill.; M. Fuerstein, Green Bay, Wis.; Miss Sadie Landsberg, Rock Springs, Wyo.

Indianapolis.

Miss Emma Binsack, with Horace A. Comstock, last week entertained her nephew, Oscar Brill, San Francisco, a wireless telegraph operator in Governmental service.

Burglars, supposed to have been boys, entered the store of Robert Keller, East and Prospect Sts., last week, and carted off several hundred dollars' worth of stock, including 45 rings, several watches, fobs, silver spoons, plate ware and revolvers.

Among the out-of-town jewelers who visited the local jobbers and manufacturers last week were: Sol Pennington, Knights-town; J. A. Miessen, Cicero; D. S. Whitaker, Lebanon; J. A. Pickett, New Castle; H. Wheeler, Dana; J. F. Harding, Brownsville, and Aaron Pursel, Noblesville.

Back in April, Harry Camp, Chicago, came to this city and sought a room in which to open a new retail store. He selected a room in the Claypool Hotel building. The rent was \$2,500 a year, and he paid Manager Cunningham, of the hotel company, \$150. He then engaged decorators to beautify the room. Several hundred dollars' worth of fixtures were introduced, and the decorating work was to cost \$250. The opening was announced for June 1, then was changed to June 15, and later to July 1. Manager Cunningham now says that Camp has decided not to open a store in this city. He does not know what caused a change in plans.

Detroit.

Burr, Patterson & Co. have rented additional space in the building at 73 W. Fort St., the old quarters being too cramped.

William Windish, Jr., with Noack & Gorenflo, was recently married to Miss Usmen. Hugo Stahl, of the same firm, was also married recently to the firm's stenographer, Miss Ida Drebs.

The Hon. Sidney O. Bigney, Attleboro, Mass., arrived too late to take in the excursion carrying 255 Michigan jewelers, but after they reached dry ground again he made himself very popular with them.

Hugh Connelly, the State St. jeweler, expects to have his stock in the remodeled and enlarged store the latter part of next week. For nearly two months he has been occupying cramped quarters on the third floor of the Hodges building.

The entertainment of the visiting jewelers by the Detroit Jewelers Board of Trade is in line with their policy of boosting Detroit as a growing trade center. The officers of this organization are: President, Frank Kennedy, of the Kennedy Optical Co.; vice-president, R. Rogers, of Kunz & Rogers; secretary, Chas. A. Berkey, of the Chas. A. Berkey Co.; treasurer, A. E. Patterson, of the Burr-Patterson Co.

Mrs. Anna Koppelman, Arenzville, Ill., recently disposed of her retail jewelry business to F. C. Ballhorst, Quincy.

St. Louis.

D. P. Richards, of the Maschmeyer-Richards Silver Co., is on a visit to his mother at Columbia, Mo.

Barnum & Burton, opticians and photograph supplies, have removed from 609 Locust St. to 318 N. 8th St.

O. H. Kortkamp, president of the E. H. Kortkamp Jewelry Co., is spending his vacation at Elkhart Lake, Wis.

John A. Gerst, manager of the repair department of Whelan-Aehle-Hutchinson Jewelry Co., is on his vacation.

President Herman Mauch, of the Retail Jewelers' Association, of Missouri, announces a meeting of the association for next Wednesday.

L. P. Hebards, Sheffield, Ala., stopped over in St. Louis, one day last week, on business, while on his way to spend his vacation in the east.

M. M. Gumbiner, Luling, Tex., was in St. Louis, last week, on his way home from Chicago, where he was present at the wedding of one of his relatives.

Simon Van Raalte, 213 N. Seventh St., reported to the police, last week, that some person stole an open-face gold watch from his store in some unaccountable way.

J. T. Wells, Kansas representative, and S. L. Lowenstein, Missouri and Illinois representative of the Bauman-Massa Jewelry Co., start out this week on their regular trip.

Alvin L. Bauman, president of the L. Bauman Jewelry Co., will sail, July 20, from Cherbourg, on the Hamburg-American liner, *Amerika*, after an extended trip abroad.

Local jobbers received information of the death at Dardanelle, Ark., of Henry Vernon, who had been in the jewelry business there for many years. Heart failure was the cause of his death, on July 9.

H. M. Hubbard, Texas representative of the L. Bauman Jewelry Co., with headquarters in Fort Worth, stopped over in St. Louis on his way to spend his vacation in Detroit. He was accompanied by his wife and child.

C. L. Bates, diamond expert, with the F. W. Drosten Jewelry Co., accompanied by his family, is spending his vacation in Minneapolis and St. Paul. William Hocker, of that firm, has returned from his vacation.

William Weidlich, of William Weidlich & Bro., recently went to Bridgeport to attend the funeral of his brother, Charles E. Weidlich. E. C. Weidlich probably will not return to St. Louis until some time next month.

The name of James J. Burke, president, is being placed at the head of the signs of the Brooks Jewelry & Optical Co., Globe-Democrat building, instead of Brooks-Auer Jewelry Co., as erroneously published in a prior issue.

C. L. Stange, formerly with Norris, Alister & Co., Chicago, has been added to the staff of traveling representatives of the L. Bauman Jewelry Co., with territory in Missouri and Kansas. He will start on his first trip for this company on July 20.

Joseph Sammerschreuter, who was manager of the New York house of Mermod, Jaccard & King Jewelry Co., has now returned to the company's store in this city.

E. W. Bornmueller, buyer of the silver department of this company, is on his vacation.

F. W. Drosten, of the F. W. Drosten Jewelry Co., accompanied by Mrs. Drosten, will sail, July 30, from New York on the *Kronprinz*, for Europe, to remain six weeks abroad, combining business with pleasure. They will visit Amsterdam, Paris and London.

The *Republic* printed a first page interview Thursday with Goodman King, the president of the Mermod, Jaccard & King Jewelry Co., with reference to the work of restoration of the World's Fair grounds. Mr. King said that greater progress had been made here than in Paris.

Among the visiting jewelers in St. Louis, last week, were the following: William Krommeyer, Murphysboro, Ill.; M. J. Boydston, Albia, Ia.; L. A. Holdener, Belleville, Ill.; Charles Mosby, Batesville, Ark.; L. Hebard, Sheffield, Ala.; Fred Herold, Jerseyville, Ill.; H. D. Leffel, San Angelo, Tex.

Cincinnati.

Frank Herschede is at business again after an attack of typhoid fever.

J. C. Miller, of the Miller Jewelry Co., has started on a business trip east.

William Pfleger, of Joseph Noterman & Co., is enjoying the fishing in Michigan.

C. C. Stoner, of Lindner & Co., is able to be out again and will be on the road Aug. 1.

A. Westhoff, with the Frank Herschede Co., with his family, is at Benton Harbor, Mich.

Lucian Bingaman, with Bingaman & Co., is taking an outing at Atlantic city and New York.

"Nate" Hahn, with Lindenberg, Strauss & Co., was in New York the past week on business.

Sturgis Lawrence, New York manager for the Rookwood Pottery Co., was in the city last week.

Otto Mehmert, with Joseph Mehmert, and his bride, are home from their honeymoon in the east.

G. H. Hansgen, Bethel, O., will close his store for the month of July and take a rest in Pennsylvania.

C. E. Richter, of Richter & Phillips, with his wife, left July 15 on a month's trip in the Rocky Mountains.

Louis Hummel, 9 Emery Arcade, is spending the hot months at his Summer home in New Richmond, O.

Joseph Phillips and M. D. Geigerman, of the Sterling Glass Co., have left on extended business tours east.

Henry Wiseman, recently of Milwaukee, Wis., but formerly with the Clemens Oskamp Co., has again connected himself with this company.

Sam Wagner, with George Simper, is home from a trip abroad and has much of interest to tell about the jewelry trade of the various European cities.

M. J. Greenwald, 33 Arcade, has completed improvements to his store and its new wall decorations now give his establishment a most pleasing appearance.

Considerable inconvenience and a discontinuance of work was suffered by the Wadsworth Watch Case Co. a part of last

week by the bursting of a water plug at the factory.

S. & H. Gilsey, recently added to their road force Joseph Herwin, who will travel among the southern trade. O. C. Tyson, formerly watchmaker with the Oskamp Jewelry Co., is now located with this house.

Adolph F. Schmidt, for many years a partner of Henry A. Dodt, 26 Emery Arcade, and well and favorably known here, has now succeeded Mr. Dodt and will conduct the business hereafter. Mr. Dodt is still in very poor health.

A. C. Thomas, Anniston, Ala., stopped here on his way to New York, where he has bought the Metropolitan Optical Parlors in the Metropolitan building, 1 Madison avenue. The Anniston business will be conducted by a brother, L. W. Thomas, and W. T. Thomas, another brother, will take charge of the store at Sistersville, W. Va.

Out-of-town dealers who were here making purchases last week included: Will Schaible, Troy, O.; John Selbert, Frankfort, Ky.; A. Clooney, Maysville, Ky.; O. J. Sherwood and wife, Falmouth, Ky.; C. F. Cross, Gadsden, Ala.; Joseph E. Smith, Lockland, O.; Mr. Gleason, Louisville, Ky.; M. K. Peck, B. H. Stief Jewelry Co., Nashville, Tenn.; Frank Horning, Brookville, Ind.; E. F. Starks, New Point, Ind.; H. Reed, Blanchester, O.; O. E. McWaters, Somerset, Ky.

The case of Mabel Hall and John Delaney, who sometime ago secured a diamond ring from the Oskamp Jewelry Co. and one from the Duhme Jewelry Co., was in court last week but the proceedings are not yet fully settled. The stolen goods will be returned to the concerns which lost them. Delaney was acquitted by the judge of the charge of receiving from Mabel Hall the jewelry obtained from these companies under false pretenses. The woman is still under indictment. She testified she had planned the stealing and did it herself. The woman did not implicate Delaney. She is said to have served a term in the penitentiary for similar offenses, though only about 22 years of age.

Minneapolis and St. Paul.

R. G. Winter, of the R. G. Winter Jewelry Co., Minneapolis, has gone for a vacation at Annandale, Minn.

Lewis Finkelstein, St. Paul, who was burned out in the Ryan annex fire, has adjusted his loss with the insurance companies at \$23,000.

Axel E. Madsen, of Minneapolis, who represents Rettig, Hess & Madsen in the Northwest, recently returned from a vacation trip to Iowa, after which he went to Chicago.

L. Metzger, of S. Jacobs & Co., Minneapolis, presented to the participants in the automobile parade held in this city last week the club colors of the Minneapolis Automobile Club.

L. Peterson, the four-year-old son of P. C. Peterson, a retail jeweler of Waverly, Kans., was accidentally shot and severely wounded by a reckless handler of a shotgun at a chari-vary, at that place, recently.

San Francisco.

TRADE CONDITIONS.

The wholesale jewelers are busy these days arranging their new quarters and at the same time trying to keep up with the rush of business. The traveling men are now out and the heavy orders arriving here indicate that the percentage of the trade that went to other cities after the fire was not very large after all. Loyalty to San Francisco is shown by shopkeepers in interior towns who refused to give orders to travelers from other cities, preferring to send their orders here by mail and get goods later. The wholesale jewelers are experiencing hardships in sticking to their present quarters in the Kamm building, where almost all of them are located. The elevators are not in running order yet and all goods have to be carried up the stairway by hand or hauled up to the windows by means of block and tackle. The city trade continues good, as new stores are being added each week and all these require a heavy initial stock. Such stores as are now open for retail business are doing well. Within another month the new retail centers will be fully prepared for the shopping trade.

The Columbia Loan Office has a temporary location at 3 Stockton St.

W. R. Landrum, a manufacturers' agent, is to open offices soon in the Cordes building.

Schwartzkoff & Penniman, formerly located here, have gone into business in Los Angeles.

The Alexandra Jewelry Store, at Van Ness Ave. and Pine Sts., was opened July 10.

Raphael's Loan Office, formerly of 602 Kearny St., is now located at 1340 Fillmore St.

The Diamond Parlor Jewelry Co., formerly located at 722 Market St., now has a large store at 1429 Fillmore St.

Mr. Desenfant, a manufacturer's agent, who formerly had quarters in the Thurlow block, is now located on Van Ness Ave., near McAllister St.

H. C. Van Ness & Co., who are at present doing business at 1932 Baker St., will soon be located in the Cordes building at Bush St. and Van Ness Ave.

The Portland Jewelry Co. now has an office on its old site on Stockton St., and the United Loan & Trust Co., jewelers and pawnbrokers, are also in the same building.

George R. Moss, formerly in business at 116 Geary St., has sought other fields that seemed more attractive to him than the jewelry trade, and is now in the restaurant business in this city.

The Nathan-Dohrman Co. is now erecting a large store building on Van Ness Ave. near Pine St., and will soon open with their line of goods, which includes fancy cut glass and table silverware.

The Fleissner Marshall Co., formerly in the retail trade at 14 Geary St., is to go into the haberdasher business on Van Ness Ave., but may return to the jewelry business when conditions become more favorable.

Work on the Bohm Bristol Co.'s building at Sacramento St. and Van Ness Ave. is progressing rapidly, and this firm is now making active preparations to occupy it early in August instead of in September, as was at first planned.

The Baldwin Jewelry Co. will soon have one of the largest and most artistic stores in San Francisco. The building will be occupied exclusively by this firm. The interior fittings are among the finest installed

in San Francisco since the fire. A feature is its appearance of permanence.

Mr. Hammersmith, of Hammersmith & Field, says that they have had all the business they can attend to ever since the opening day. The repair department at the store is kept busy and an outside factory is being operated, much of the work being the restoration of silverware injured by the fire.

Shreve & Co.'s new store on Van Ness Ave. will be ready in about a month. Considerable repair work is being done at the temporary store on Jackson St., and also at the office that is being maintained at 12th St. and Broadway, Oakland. The headquarters of the firm are now in the Shreve building at Post St. and Grant Ave., and a fair stock of goods is for sale there now.

The Radke building, at the corner of Van Ness and Bush Sts., is completed, and Radke & Co. are now occupying their new store, although the fittings are not yet in place. This store is commodious and has an unusual length of display windows of which full advantage is being taken to call attention to the new stock. The same high class of goods will be carried here as was in the stores before the fire. Special attention is to be paid to the household silverware department. Mr. Radke has retained many of the old clerks. The store on Devissadero St. will be continued, and much of the repair work will be done there. An expert watchmaker will be employed in the new store also.

Oregon.

E. C. Barkey & Co. have purchased the stock and business of V. R. Wilson, Coquille, Ore.

A Feldenheimer, Portland, Ore., has received a permit for the erection of a two-story frame residence on King St.

T. S. Weekly, Hood River, Ore., has opened a new jewelry store and repair shop in the real estate room with Onthank & Otten.

Arthur Clarke, who has been in the employ of Jaeger Bros., Portland, Ore., has located in Hood River, Ore., in Chas. Clarke's drug store.

A. Salzman, a jeweler of Roseburg, Ore., accompanied by his daughter and friends, have started for the Crater Lake country, on a pleasure trip. While Mr. Salzman is away, P. J. Pond, of Peel, will have charge of the jewelry store.

Diamonds valued, at \$1,000 were stolen from the safe of the Astoria Loan Office, at 581 Commercial St., Astoria, Ore., at noon on June 29. A large safe at the back of the store was left open while Mrs. Tillie Grossman, the proprietor, was at dinner in her rooms in the rear of the store. It is supposed that the thief then sneaked into the place. The theft is believed to be the work of a gang.

D. D. Sullivan, Fargo, N. Dak., has closed out his jewelry business in order to devote more time to the practice of optometry.

The town of Wheeling, Nebr., on the Great Northern Railway, which is about seven weeks old, has already two newspapers and a jewelry store, besides several other establishments.

Kansas City.

C. H. Rakeman, Sapulpa, Okla., was in Kansas City this week on his return from a trip to Wyoming.

C. P. Kionka, of Kionka & Kionka, left this week for a trip through Colorado, to last about four weeks.

Mrs. H. W. Walter Starcke, Junction City, Kans., has just started a course with the Kansas City Polytechnic Institute.

Sol Marks, Lawrence, Kans., stopped off in Kansas City this week while on his way home from a stay at Excelsior Springs, Mo.

Sam Bloom, representative of the Meyer Jewelry Co., will leave next Monday for an extended trip through Kansas, Nebraska and northern Iowa.

Dr. Warner, of Warner & Co., Mangum, Okla., was in the city this week, accompanied by his family, on their way to Colorado to spend the heated term.

B. R. Hottinger, Freetown, Ind., and Gust. Carlson, of the jewelry firm of Munter & Carlson, Lindsborg, Kans., have just enrolled with the Southwestern Optical College.

S. Randazzo, who has been the watch maker for Clem. B. Altman, has resigned and gone to Buffalo, N. Y., where he will engage in the commission and importing business.

A. Y. Boswell, Tulsa, Okla., was in the city several days, having placed his boy in the hospital here for an operation. They have gone home, the operation having been entirely successful.

A. Marks, a jeweler of Lawrence, Kans., and wife, were in Kansas City this week on their return from a trip to Fort Scott, Kans., where they went to attend the funeral of Mrs. D. Prager, wife of a jeweler of that city.

Mr. Kirkpatrick, of the Model Drug & Jewelry Store, Oklahoma, Okla., was in the city this week, looking for a man to take the place of Albert Fricke, who has been his watchmaker for a long while, but who has tendered his resignation in order to engage in business for himself.

The following retailers from the surrounding towns called on wholesalers in the past week: W. S. Noble, Drexel, Mo.; S. J. Huey, Excelsior Springs, Mo.; W. R. Pearce, Gardner, Kans.; A. J. Roeder, Higginsville, Mo.; H. W. Walter Starcke, Junction City, Kans.; H. E. Tucker, Higginsville, Mo.

The Kansas City *Journal* recently published an interview with Walter M. Jaccard, of the Jaccard Jewelry Corporation, who had just returned from his diamond-buying trip to Europe. He emphasized the advancing value of diamonds and the increasing difficulty of getting the most desirable sizes and qualities.

James Hanratty, who recently pleaded guilty to the charge of having robbed the jewelry store of Mathias Mamer, Chicago, last week, withdrew the plea before Judge Honore. Another charge of robbery, which had been stricken from the call, was ordered reinstated and the prisoner will be placed on trial within a few days. Policeman Cesar Benson had been accused of the store holdup, and he shot and killed Mamer and himself because of the affair.

PUBLISHING CO.,**

11 John St., Cor. Broadway, New York.

Omaha.

Geo. W. Ryan, of the Mawhinney & Ryan Co., has returned from Lander, Wyo.

Miss Mary Hurst, with Brown & Borsheim, has returned from Denver and Manitou.

Arthur Stillman, of the Mawhinney & Ryan Co., is spending his vacation at Blue Lake, Ia.

Henry Copley, wife and daughter, will leave to-day for New York, and will stop at the Navarre Hotel.

Joseph P. Frenzer is making a trip through Oklahoma and Texas, to be absent from the city two weeks.

J. F. Mawhinney, of Mawhinney & Ryan Co., has moved into his new home, recently completed.

Chas. B. Brown, of Brown & Borsheim, accompanied by his wife, has gone to Buffalo, N. Y., on a pleasure trip.

Albin Kaas, of S. W. Lindsay, is spending his vacation in Chicago and the Lakes. Albert Winters, with the same firm, has gone to Beatrice.

Wm. Smith, of the Smith Jewelry Co., West Point, Nebr., was in the city last week calling on friends and replenishing his stock before returning home.

The following jewelers of Omaha are closing their stores at 5 p. m. during the months of July and August: Albert Edholm, Henry Copley, A. Standelberg, Brown & Borsheim, Fred Brodegard & Co., T. L. Combs & Co., S. W. Lindsay, Mawhinney & Ryan Co., and Joseph P. Frenzer.

An employe of one of the South Omaha packing houses called at Albert Edholm's jewelry store last week, to ascertain the value of a diamond ring taken, he said, from the stomach of a cow, slaughtered at the yards. The ring was of a Tiffany setting, and Mr. Edholm placed a value of \$65 on it.

The out-of-town jewelers in the city last week purchasing stock included: John Crabell, Plattsmouth, Nebr.; W. J. Legg, Hastings; K. C. Koons, Beatrice; J. A. Reuling, Wymore; Max Egge, Grand Island; W. W. Dwight, Niobrara; Mr. De Stonter, Palmer; B. F. Smith, Valley; Morris Barnes, Avoca, Ia., and J. H. Riffe, Craig, Mo.

Buffalo, N. Y.

Roy Failing, of the Failing Optical Co., Main St., has nearly recovered from the effects of severe burns received in the explosion of a gas stove.

Frank Sutherland, who a few weeks ago established a jewelry store at 122 Broadway, has sold his stock and has gone to Asheville, N. C., where he will engage in watch repairing.

Frank Hammond, 54 Seneca St., came home Saturday from the Adirondacks, where he was a guest of E. Van Etten, vice-president of the New York Central Railroad Co. Mr. Hammond has just completed his inspection of watches of Boston & Albany Railroad employes.

A. E. Sipe, 8 Mooney building, heads a movement for closing the wholesale houses on Saturday afternoon during July and August. Mr. Sipe will go with his family, July 25, to the Thousand Islands, to be

absent several weeks. He will be joined here by his brother, George W. Sipe, Koko, Md., who will accompany him on the trip.

Paul Kinney, 16 years old, son of Jireh Kinney, jeweler at 92 Seneca St., was found lying insensible by the side of his bicycle in a highway about a mile from his home in East Aurora last Thursday. The boy had been thrown from his wheel, and had struck on his head. On Saturday he had not regained consciousness, and the family was much alarmed, fearing that his skull was fractured.

Rochester.

Philip Present is spending a few days' vacation at Keuka Lake.

Elery A. Handy will shortly move into the quarters on State St. until recently occupied by Gooberlet Bros., dealers in leather novelties. The store is being altered, and some attractive improvements are being made. Mr. Handy will put in many new fixtures, and will carry an extensive line of watches and jewelry.

Little enthusiasm is being displayed by jewelers here in the coming national convention of the jewelers to be held in this city. Some say that it is immaterial to them whether a national association is formed or not. Others think that the attempt to organize will prove a failure. It might be supposed that with jewelers coming from all parts of the country local dealers would get together and show that they are not asleep. When the New York State association was formed, this city was not represented. Rochester could have an association—and a good one—if the jewelers would get together.

New Orleans, La.

William Frantz & Co., 142 Carondelet St., have opened a branch store and repair shop in Rampart St., opposite the Union Station.

J. Julius Weinfurter will soon take a much-needed rest in the fine pine land country of the Ozark Belt, on the northern shore of Lake Pontchartrain.

Gabe Hausmann, of T. Hausmann & Sons, expects to leave for New York by steamer in a few days. Mr. Hausmann before his return home will travel extensively in the north and east.

Pacific Coast Notes.

A. A. Poole, Santa Barbara, Cal., has moved into enlarged quarters in the Hopkins building.

J. D. Bennett, San Rafael, Cal., accompanied by his wife, is on a vacation in Los Angeles, Cal.

G. W. Weber, Long Beach, Cal., has moved from his former location at 130 W. Second St. to the room next door, 128 W. Second St. He has more room, and intends to improve the store.

The Business Men's Association of Scranton, Pa., of which several jewelers are members, has decided to close the stores in that city every Wednesday afternoon during July and August.

The Diamond Markets.

ANTWERP, July 4.—The quiet condition of the diamond market at the present time is due to many merchants now being on their Summer vacations. There is no great demand for large stones nor for brown roses and six faces, but good *mêlée* find ready buyers at good prices.

A large number of foreign buyers visited the Diamond Club during the past fortnight. Among others: Mr. Hekster, Amsterdam; Messrs. M. Slabotsky, Mathiossian, Rouline, Eknoryan, Schiff, L. Von Moppes, E. Mayer, Sigaar, Bismuth, Haski, Slycer, Mitacopolo, all of Paris; Messrs. Weinberg, Eisner, Bailey, Ben Rees, Hess, New York; Messrs. Goldberg, Robinson, Kauffman, L. Von Moppes, Rodrigues, Tufeld, London; Mr. Goretti, Rome; Mr. Lagowir, Moscow; Mr. Nocera, Naples; Mr. Winkler, Vienna; Messrs. Schaul and May, Atlanta, Ga.; Mr. Atlas, Philadelphia; Mr. Witta, Turin; T. Singer, Farlow; Mr. Abend, Berlin; Messrs. Agopovitch and Ostarjean, Andrinople; Mr. Schatkin, Liverpool; Mr. Manskleed and Mr. Weintraub, Warsaw; Mr. Mayers, Boston; Mr. Hanningberg, Berlin; Mr. Alfandari, Constantinople; Mr. H. Strauss, Hanau; Mr. Balaiche, Alger; Mr. Ribacconi, Buchard.

AMSTERDAM, July 4.—Business will continue rather quiet until the end of August when many merchants who are now on their vacation will return for active work. Good *mêlée* and very small brilliants are about the only varieties that find buyers readily. Rough goods have been more regular during the past fortnight.

The diamond factory of Mr. Deldan, Van Hall St., will be sold shortly. The factory has 56 mills. The new factory of Eduard Van Dam, which is to be erected very soon by architect Van Arkal, will be fully equipped, having about 300 mills.

PARIS, July 4.—The French market, like all other European markets, feels the absence of many of its prominent merchants, and it is expected that the market will be very quiet until the end of August, though there have been some good sales made in white roses and *mêlés* during the last week, as well as in two and three grain brilliants, the large brilliants not being asked for. There have also been a few buyers for white pearls, but sales in colored stones were of little importance.

Miss Belle Grunberg, daughter of Mr. Grunberg, a well-known diamond merchant, was married recently to Mr. Goldschmidt. Oscar Gerder was married to Miss D. Rosenthal, daughter of Mr. M. Rosenthal.

Mr. Vanderheyem left for Antwerp to-day and will return next week.

C. C. Minton, formerly in business in El Reno, Okla., has completed arrangements to move to Oklahoma City, Okla., where he has secured desirable quarters in which to continue in the jewelry business.

H. L. Frick, of Ford & Frick, Freeport, Ill., has purchased the interest of W. G. Ford, and will continue the business alone. The partnership was begun about 18 years ago. Mr. Ford, who has been engaged in the jewelry business for over 44 years, will take a much-needed rest.

2 & 4 Maiden Lane, New York

Connecticut

Work has just been begun on the addition to the plant of the W. L. Gilbert Clock Co., Winsted.

N. L. Bradley has been re-elected director of the Connecticut School for Boys, formerly the State Reform School.

The S. L. & G. H. Rogers Co., Wallingford, have resumed work after the usual Summer shut-down. They are now running at full time.

The factory of the Sessions Clock Co., Forestville, resumed operations, July 12, after being shut down for 10 days while an inventory was taken.

In the Charles Parker Clock Co.'s factory, Meriden, Otto Schipke, an employee, was injured in the gear of a machine one day last week, his left arm being mangled.

The International Silver Co. has awarded the contract for an addition to its plant in Bridgeport, the plans calling for the erection of a one-story brick structure, 18 by 200 feet.

Work was begun this week just above the headgates of the R. Wallace & Sons Mfg. Co.'s race way, Wallingford, for the building of a copper dam, preparatory to putting in new foundations for the head gates.

George D. Munson and Charles D. Morris have been elected directors of the Dime Savings Bank, Wallingford, and Clifford W. Leavenworth was elected to fill the vacancy caused by the death of his father, Col. Walter J. Leavenworth.

Edward Ingraham, a son of W. S. Ingraham, received word several days ago that he had passed his entrance examinations at Yale University. He will enjoy his vacation trip to Alaska all the more for the knowledge that came to him before starting.

Judgment for \$9.84 was awarded the plaintiff, last week, in the Court of Common Pleas, New Haven, in the suit of Barton & Co. against the Ford Co. The action was based on charges for engraving, and the defendant claimed that the bill had been paid.

In honor of the birthday anniversary of N. Burton Rogers, one of its members, the Fairmont Ave. Club, at Danbury, on July 11 gave a clambake at his country home at Ballas Pond. There were 25 guests. A handsome fishing rod and tackle were presented to Mr. Rogers.

Among the jewelry stores in Waterbury that have joined merchants in other lines in an agreement to close every Thursday from July 10 to August 28, inclusive, at 12 o'clock noon are the Lake & Strobel Co., Gaffney Jewelry Co., Frank P. Becton, the Union Jewelry Co. and others.

N. L. Bradley, D. W. Parker, W. F. Rogers, Wm. H. Lyon and C. P. Bradley, at a meeting last week, were elected directors of the City Savings Bank of Meriden. C. C. Rockwell, Clarence P. Bradley, D. W. Parker, V. L. Bradley, E. Miller, Jr., Wm. H. Lyons, C. F. Rockwell, Gilbert Rogers, C. B. Rogers and George H. Wilcox were elected trustees of the same bank.

The annual lawn party was held Wednesday afternoon of last week by the Sessions Foundry Co., Bristol. The lawn around the several shops was well filled with employees and friends, fully 4,000 persons be-

ing present. President Sessions and Director Eggleston were on hand to greet the people of the town. A band provided music and fireworks was a feature of the evening.

Franklin Terry, who has been superintendent of the movement department of the Sessions Clock Co., Forestville, for the last three years, has severed his connection with the company. His successor is Samuel Mink, who has been acting for some time as assistant superintendent. Another foreman to retire is Waldo Forbes, of the finishing department. His successor will be Arthur Roberts, of Plainville.

Pittsburg.

Sam F. Sipe has bought an automobile. A number of local jewelers are preparing to leave the first week in August on their vacations.

C. L. Baird, Fairmont, has sold out his store to Mr. Scott, formerly of Marietta, O., who intends to make a number of improvements to the store.

W. J. Johnston, of the W. J. Johnston Co., left, last Friday night, for Atlantic City, where he will stay two or three weeks.

The wholesale jewelers, who propose holding a banquet in this city, early next January, to which retail jewelers will probably be invited, are perfecting arrangements for this event. A meeting will be held shortly.

The following out-of-town buyers were in Pittsburg, last week, purchasing goods: Frank Worrel, Cannonsburg; J. V. Rosendahl, Irwin; A. Katzenmyer, Burgettstown; R. W. Kuhns, Youngwood; Frank Murdock, Ligonier; J. H. Hoffman, Latrobe.

The house of E. P. Roberts & Sons, Inc., last Monday opened its new store at 233 Fifth Ave. The quarters are handsomely lighted and finely decorated and furnished. The marble men are not yet through their work, and it will be several days before they finish. It will also be a week yet before the stock is finally arranged. The firm greatly increased its stock.

Wednesday last, while the "20 mule team borax" advertising wagons, which are making a tour of the country from California to New Jersey, was passing out Fifth Ave., quite a crowd collected to view the unusual sight. After the "team" left, Charles Witzel, son of A. Witzel, of Witzel & Pfaffenbach, who had been standing in front of the concern's store, missed his gold watch, fob and diamond-studded locket. The outfit is very highly prized by Mr. Witzel, as it was a token given him by the firm for his bravery in preventing the firm from being robbed of a tray of diamond rings valued at \$10,000. The watch was an open-face 14-k. engine-turned 16s case, and had the firm name stamped in the back lid. The case was number 44312. The movement, which has the firm's name and Pittsburg, Pa., on the dial and plates, is a 21-jewel, adjusted nickel, Number 1369891. The cap of the watch was engraved: "Presented to Charles Witzel by his Employers, Witzel & Pfaffenbach, Dec. 25, 1898." The fob was leather, gold trimmed; locket was square

in shape; ring on corner had engraved border with diamond in center. A liberal reward will be paid for the return of the above, especially the watch, owing to the sentiment connected with its presentation.

Canada Notes.

Albert S. Shadd, St. Catherine, has given a chattel mortgage for \$85 to A. Aikins.

Wm. R. Counter, Clinton, Ont., has given a renewal chattel mortgage for \$926 to C. Rumball.

Philip B. Crews, Kingston, Ont., has given a renewal chattel mortgage for \$11,554 to P. W. Ellis & Co., Ltd.

William Kaufmann, London, Eng., who has been on a trip around the world, passed through Toronto this week on his return homeward.

Ambrose Kent and Fred. Kent, of Ambrose Kent & Sons, Toronto, are enjoying a Summer vacation at Honey Bay, Parry Sound District.

C. A. Read, who was for 10 years with M. Cochenthaler, has gone into business for himself, opening a watchmaker's and jeweler's establishment at 54 St. Francois Xavier St., Montreal.

Out-of-town buyers calling on the Toronto trade last week included T. C. W. Watson, Newmarket, Ont.; George Hynds, Acton, Ont.; E. D. Wilcox, Uxbridge, Ont., and F. F. Sills, Brantford, Ont.

Joseph Dubuc, 19 years of age, of St. Hubert, Que., who was arrested a few days ago on a charge of attempting to steal a watch from the store of Theodore A. Grothe, Montreal, was sentenced to six hours in the cells, and a fine of \$10, or 15 days.

The continued considerable growth of Canadian import trade is seen in the fact that the customs revenue for the 12 months just ended amounted to \$16,204,731, an increase of \$4,669,858 as compared with the previous fiscal year. The Canadian stamp issue for the same period amounted to \$7,068,927, which is an increase of \$866,095 as compared with the previous fiscal year.

Everybody probably has heard of the cow jumping over the moon, while the dish ran away with the spoon—a robbery of silver plate with the cow acting in collusion. In the pound of Ville St. Louis, Montreal, is a cow which a few days ago dashed through the plate-glass window of Edgar Saulnier's jewelry store on Mount Royal Ave., and smashed a showcase besides kicking up a rumpus. Mr. Saulnier is now waiting for the owner of the cow, as he has a bill of damages for broken glass and jewelry.

At the annual meeting of the Toronto branch of the Canadian Manufacturers' Association, held in Toronto on the 10th inst., W. B. Tindall, the retiring chairman, in his address referred at length to the labor problem, saying that skilled help was never so difficult to procure or to retain as it is to-day. He feared the loss of the Northwest market to Canadian manufacturers unless they can get sufficient help to man their factories. Thomas Roden, of Roden Bros., was elected a member of the executive committee. W. K. George, Standard Silver Co., and W. K. McNaught, American Watch Case Co., were chosen as members of the Industrial Exhibition Committee.

North Attleboro.

Charles Blackwell is the new foreman of Straker & Freeman.

J. F. Sturdy's Sons Co., J. J. Sommer & Co., and the George L. Paine Co., are working 13 hours a day.

Alton H. Riley, George W. Cheever, Alvin Chisholm and Andrew E. Morris have opened cottages for the Summer at Cottage City.

Fred Paye has now recovered sufficiently from his operation for appendicitis as to be able to attend to his duties at the factory of the Paye & Baker Mfg. Co.

John MacMillan on Friday resigned as southern salesman for C. Ray Randall & Co., and will conclude his services the latter part of this month. Walter Duncan will be his successor.

Among the salesmen to arrive in town during the past week were: K. L. Taylor, of Riley & French; Fred Carpenter and Louis Blackinton, of the W. & S. Blackinton Co.; Fred Cook, of Whiting & Davis, John MacMillan, of C. Ray Randall & Co.

It was announced, last week, that Riley & French were to build an addition, 42 by 28, to their Broad St. factory. At present the addition will be but one story, but it will be arranged so as to be extended up four floors later. The addition, which will have 1,200 square feet of floor space, will be utilized by C. Ray Randall & Co.

Lancaster, Pa.

Harry Kiehl, of Louis Weber & Son, visited New York last week.

Frederick A. Wheeler, of the Non-Retailing Co., is home from the west.

George R. Hepp and family, of Lilitz, spent last week at Mt. Gretna, Pa.

Henry B. Cohn and bride, Philadelphia, have been the guests of Marcus Einstein, brother-in-law of Mr. Cohn.

W. W. Appel, who must vacate his store-room in the Wheatland Hotel by Aug. 1, is reducing his stock in order to remove to smaller temporary quarters.

S. Kurtz Zook was among the members of the Lancaster Board of Trade who were entertained Friday afternoon by William Martin at his country home near Lancaster, "The Hedges."

Among the jewelers visiting Lancaster last week were J. H. Sensenig, New Holland; S. H. Miller, Mt. Joy; C. E. Hiakle, Ephrata, and H. L. Oberlin, of H. S. Oberlin & Bro., Columbia.

Arthur P. Markley, a St. Louis jeweler who was taken ill on the train while en route to New York, and had to be removed to a Lancaster hospital, has so far recovered that he was able to leave for home on Saturday.

E. F. Miscally, of James Allan & Co., Charleston, S. C., came here last week to place his son Philip in the Ezra F. Bowman Technical School to learn watchmaking. Charles M. Bowman visited Penmar, Ind., last week.

Considerable attention was attracted last week to an exquisite necklace of 47 fine diamonds which was on exhibition in a show window of S. Kurtz Zook's establish-

ment, where it was made. It was of novel design, with cluster drop.

Boston.

E. A. Cowan arrived home from Europe this week.

F. B. Chace has returned from a business trip through northern New England.

David Nenser, salesman for E. A. Cowan, is on an outing at West Foxboro.

Walter B. Snow, of this city, has taken an interest with the Littlefield Silver Co., New Bedford.

Eugene O'Connor has been engaged by Harwood Bros. as inside salesman in their optical goods department.

M. B. Joseph, Chicago resident representative of Wilpelt & Saacke, has been in Boston during the week.

Reginald W. P. Brown, of the Nelson H. Brown clock house, is at Littleton, N. H., on his midsummer outing.

Harry Orkin, formerly with B. J. Orkin, of this city, has started in business on his own account in Chelsea, Mass.

Edmund T. Glover, manager for Bigelow, Kennard & Co., returns this week from a fortnight's outing at Manomet, Mass.

Pierce Parker, for the past nine years in the material department at Henry Cowan's, has taken a similar position with Charles May & Son.

A. W. Armington, diamond buyer for Shreve, Crump & Low Co., has just returned from a trip to the principal diamond centers of Europe.

Affairs of the firm of Mackenzie & Allen have been settled by Mrs. Allen's retention of her late husband's interest in the business, which will continue under the same firm name as heretofore.

Charles H. Crump, of Shreve, Crump & Low Co., who had intended to remain abroad until October, has shortened his European tour considerably, and will sail for home on Aug. 3.

Buyers in town during the week included: E. Beaudrean, Marlboro; M. F. Wood and J. A. Filion, Lowell; Thomas Margetts, Hingham; Joseph Lajoie, Worcester; E. S. Eastman, Swampscott; A. J. Laliberte, Derry, N. H.

Elmer E. Knight, head salesman for A. S. Hirshberg, goes to Maine on a recreation trip this week, driving his blue-ribbon team from his home in Reading, Mass., to Berwick, and planning for a number of interesting carriage drives during his outing.

Albert Schaub, Detroit, Mich., who was the guest of Henry Cowan when in Boston last week, was the winner in a party of 16 who enjoyed a harbor fishing trip and dinner. Mr. Schaub caught an 11-pound cod and the \$5 pool went to him as a prize.

John Addison, of the Charlestown district, who is one of the heavyweights of the Boston jewelry trade, tipping the scales close to 240 pounds, has a country home at Wilmington, Mass., where he recently accomplished the feat of raking, loading and stowing six tons of hay in a day.

Exhibited in the store of H. Jackson, Williamsport, Pa., are a number of swords found in Libby Prison, several old American coins, old-fashioned spoons and other interesting relics. Curios are constantly being added to the collection.

Attleboro.

TRADE CONDITIONS.

A tour of the jewelry factories the past week brought to light an amazing rush for early July, help scarce in comparison with the demand, and the manufacturers constantly under mail and telegraphic pressure from all over the country to "hurry" this, that or the other order. Dealers in chemicals and supplies report an increase of 40 per cent. over this time last year, and one concern dealing in belting reports an increase of 65 per cent. Pasteboard box makers say they never were so driven.

E. S. Cobb, salesman for R. B. Macdonald & Co., is in New York State on a business trip.

Frank C. Miller, formerly of Leach & Miller, this town, now of Providence, married, last week, Miss Harriet C. Luther, of North Attleboro.

Fred M. Ellis, who recently took charge of the New York office of the S. & B. Lederer Co., Providence, has removed his home to the latter city.

The employees of the Watson & Newell Co. enjoyed, Saturday, their annual outing at Boyden Heights, R. I. The employees of the Torrey Jewelry Co. had, last week, their annual excursion, going to Lake Winnecomet, Norton, Mass.

The Reed & Barton factory force, Taunton, have resumed work in every department after a shut-down for stock taking and repairs. The activity is unusual for this time of year. Three new buildings, allowing an extension in several departments, are in process of construction.

A semi-annual dividend of 2 per cent. for the six months ending July 1 has been declared by the R. F. Simmons Co. to its employees. It is the ninth semi-annual dividend for the employees. A total of \$1,880.15 will be distributed as compared with \$1,350 of a year ago. This is the largest distribution to the employees that the company has made in any July since it commenced the profit sharing scheme.

Hon. Sidney O. Bigney, of S. O. Bigney & Co., last week went to Detroit to address the Michigan Retail Jewelers' Association. The desire of his political associates to see him run for Congress dies hard, in spite of his repeated assurances that he intends to attend strictly to his jewelry business. Just before leaving for Detroit he was approached on the subject again, and his departing words were a reassurance that he is not in the field.

Albert S. Ingraham, of A. S. Ingraham & Co., with his family, has been visiting at Touisset, R. I. Charles H. Tappan, of the D. F. Briggs Co., with Mrs. Tappan, has gone to Maine to spend the period of hot weather. Captain George H. Sykes, of Sykes & Strandberg, has made Shawomet Beach his Summer home. Jesse Carpenter, of the traveling force of the Horton, Angell Co., has gone to Nantucket. George Simmons, of J. M. Fisher & Co., has installed himself and family at Silver Beach, Mass. Charles H. Allen, of C. H. Allen & Co., has gone to Niagara Falls. Fred A. Newell, formerly of the Watson & Newell Co., has opened his Summer home at Drownville, R. I. George Poole, of the Poole Silver Co., Taunton, is visiting relatives at Prince Edward Island.

J. C. Vines, Bessemer, Ala., has moved to larger quarters on Third Ave.

Recent Decisions by General Appraisers as to Jewelry, Precious Stones and Kindred Lines.

The Board of United States General Appraisers, recently rendered the following decisions in cases involving questions as to the customs duties on precious stones, jewelry and kindred lines:

ORNAMENTS—PASTE BUTTONS—PINS.—Protests of A. & H. Veith against the assessment of duty by the Collector at New York. G. A. 6,376 (T. D. 27,390), G. A. 6,130 (T. D. 26,653), G. A. 6,279 (T. D. 27,061), and United States *v.* Garrison (127 Fed. Rep., 1,022; T. D. 25,072) followed, relating to ornaments, paste buttons and pins.

ORNAMENTS—TOY JEWELRY—CHAINS—PINS—CHAIN HOLDER—PASTE BUTTONS—STRUNG BEADS—BEADED ARTICLES—CHATELAIN BAGS—BON-BON BOXES.—Protests of Samstag & Hilder Bros. against the assessment of duty by the Collector at New York. The decision related to 22 varieties of merchandise. The Board disposed of the questions raised on the authority of the following decisions: G. A. 6,374 (T. D. 27,382), G. A. 6,130 (T. D. 26,653), Steinhardt *v.* United States (113 Fed. Rep., 996), Abstract 5,635 (T. D. 26,248), G. A. 6,576 (T. D. 27,390), Strauss *v.* United States (T. D. 26,903), Tiffany *v.* United States (131 Fed. Rep., 398; T. D. 25,316), G. A. 6,330 (T. D. 27,255), and United States *v.* Clark & Kaufman (T. D. 27,093) relating to ornaments, toy jewelry, chains, pins, chain holder, paste buttons, strung beads, beaded articles, chatelaine bags and bon-bon boxes.

ORNAMENTS—PINS—CHAINS—CHATELAIN BAGS—STRUNG BEADS.—Protests of Aebegg & Rusch against the assessment of duty by the Collector at New York. G. A. 6,374 (T. D. 27,382), G. A. 6,376 (T. D. 27,390), and Tiffany *v.* United States (131 Fed. Rep., 398; T. D. 25,316) followed, relating to ornaments, pins, chains, chatelaine bags and strung beads.

PINS—ORNAMENTS—MANUFACTURERS OF METAL.—Protests of Cohn & Rosenberger against the assessment of duty by the Collector at New York. The merchandise consisted of pins, ornaments, goods composed chiefly of metal and other articles. As claimed by the importers, they were held dutiable as manufactures of the component material of chief value.

BRASS SNAPS.—Protests of A. F. Fellheimer *et al.* against the assessment of duty by the Collector at New York. G. A. (T. D. 27,255) followed, relating to brass snaps.

BRASS SNAPS—UNFINISHED JEWELRY.—Protests of Manhattan Chain Co. *et al.* against the assessment of duty by the Collector at New York. The merchandise consisted of (1) snaps or swivel clasps of brass not plated nor washed with precious metals and (2) of necklet snaps and slides set with imitation precious stones and designed for use in the manufacture of cheap jewelry. The merchandise in the first class was held dutiable as manufactures of metal, as claimed by the importers. G. A. 6,330 (T. D. 27,255) followed. The merchandise comprised in the second class was held to have been properly classified under Par. 434, tariff act of 1897, relating to unfinished jewelry.

RHINESTONE BUTTONS.—Protest of Rothschild Bros. & Co. against the assessment of duty by the Collector at New York. G. A. 6,279 (T. D. 27,061) followed, relating to rhinestone buttons.

RECONSTRUCTED RUBIES—IMITATION PEARLS.—Protests of J. F. Allen against the assessment of duty by the Collector at New York. Protests sustained on the authority of G. A. 6,336 (T. D. 27,278) and G. A. 6,088 (T. D. 26,554), relating to reconstructed rubies and imitation pearls.

RECONSTRUCTED RUBIES—IMITATION PEARLS—PEARLS—PRECIOUS STONES.—Protests of Benedict & Warner *et al.* against the assessment of duty by the Collector at New York. G. A. 6,336 (T. D. 27,278), G. A. 6,088 (T. D. 26,554), G. A. 5,914 (T. D. 26,013), and G. A. 6,097 (T. D. 26,586) followed, relating to reconstructed rubies, imitation pearls, pearls and precious stones.

PRECIOUS STONES—IMITATION PEARLS—RECONSTRUCTED RUBIES.—Protest of Overton & Co. against the assessment of duty by the Collector at New York. G. A. 6,097 (T. D. 26,586), G. A. 6,336 (T. D. 27,278), and G. A. 6,088 (T. D. 26,554) followed, relating to precious stones, imitation pearls and reconstructed rubies.

PIERCED IMITATION PEARLS.—Protests of Cohn & Rosenberger against the assessment of duty by the Collector at New York. G. A. 6,088 (T. D. 26,554) followed, relating to pierced imitation pearls.

BEADS.—Protest of S. A. Frost's Son against the assessment of duty by the Collector at New York. The merchandise was held to have been properly classified as beads under Par. 408, tariff act of 1897.

JEWELRY—WOODEN NECKLACES—CHATELAIN BAGS.—Protests of Samstag & Hilder Bros. against the assessment of duty by the Collector at New York. The merchandise was classified as jewelry under Par. 434, tariff act of 1897, and was claimed dutiable as manufactures of the component material of chief value. This contention was sustained as to chatelaine bags on the authority of Tiffany *v.* United States (131 Fed. Rep., 398; T. D. 25,316), and it was overruled as to so-called necklets and wooden necklaces, which the Board held to be dutiable at the same rate as assessed under the provision in Par. 408 for beaded articles.

INCUSTED STONES.—Protests of Nordlinger & Mamluck against the assessment of duty by the Collector at Providence. Protests sustained on the authority of G. A. 6,342 (T. D. 27,292), relating to incusted stones.

PRECIOUS STONES.—Protest of Carl Blatt against the assessment of duty by the Surveyor at St. Louis. As claimed by the importer, the merchandise, which was invoiced as "Bohnische Runde, Fassgranat Rosen," was held dutiable as precious stones cut but not set, under Par. 435, tariff act of 1897.

RECONSTRUCTED RUBIES—IMITATION PEARLS—PRECIOUS STONES.—Protests of John F. Allen against the assessment of duty by the Collector at Providence. G. A. 6,336 (T. D. 27,278), G. A. 6,088 (T. D. 26,554), and G. A. 6,097 (T. D. 26,586) followed, relating to reconstructed rubies, imitation pearls and precious stones.

PINS.—Protests of Dieckerhoff, Raffloer & Co. against the assessment of duty by the Collector at New York. G. A. 6,139 (T. D.

26,679) followed, relating to pins. A similar decision was rendered on the protest of Jas. G. Johnson & Co.

TOY JEWELRY—MANUFACTURES OF METAL.—Protests of A. Strauss & Co. *et al.* against the assessment of duty by the Collector at New York. G. A. 6,297 (T. D. 27,156), G. A. 6,374 (T. D. 27,382), G. A. 5,617 (T. D. 25,213), and Abstract 10,016 (T. D. 27,114) followed, relating to toy jewelry and manufactures of metal.

ORNAMENTS—BEADS—CHAINS—TOY JEWELRY—CHATELAIN BAGS—BEADED ARTICLES—UNFINISHED JEWELRY.—Protests of A. Steinhardt & Bro. against the assessment of duty by the Collector at New York. G. A. 6,374 (T. D. 27,382), G. A. 6,130 (T. D. 26,653), Steinhardt *v.* United States (113 Fed. Rep., 996), Abstract 5,635 (T. D. 26,248), G. A. 6,376 (T. D. 27,390), Strauss *v.* United States (T. D. 26,903), Tiffany *v.* United States (131 Fed. Rep., 398; T. D. 25,316), G. A. 6,330 (T. D. 27,255), and United States *v.* Clark & Kaufman (T. D. 27,093) followed, relating to ornaments, beads, chains, toy jewelry, chatelaine bags, beaded articles and unfinished jewelry.

ROCK-CRYSTAL BALLS.—Protest of R. C. Hahn & Co. against the assessment of duty by the Collector at New York. Protest overruled on the authority of G. A. 6,301 (T. D. 27,160), relating to rock-crystal balls.

GOLDSTONES.—Protest of Rud. C. Hahn & Co. against the assessment of duty by the Collector at New York. Protest overruled on the authority of G. A. 6,089 (T. D. 26,555), relating to goldstones.

IMITATION ROCK-CRYSTAL INTAGLIOS.—Protest of Nordlinger & Mamluck against the assessment of duty by the Collector at New York. G. A. 6,367 (T. D. 27,346) followed, relating to imitation rock-crystal intaglios.

FANS.—Protest of Oberle & Henry against the assessment of duty by the Collector at New Orleans. Protest sustained on the authority of Downing *v.* United States (141 Fed. Rep., 490; T. D. 26,454), relating to fans.

RECONSTRUCTED RUBIES.—Protests of Rooney & Spence *et al.* against the assessment of duty by the Collector at New York. Protests sustained on the authority of G. A. 6,336 (T. D. 27,278), relating to reconstructed rubies. Similar decisions were rendered on the protests of Albert Lorsch & Co.; I. Gunzburger, R. H. Macy & Co., C. E. Sherwood and Joseph E. Judels.

ORNAMENTS—JEWELRY.—Protests of Abraham & Straus against the assessment of duty by the Collector at New York. G. A. 6,374 (T. D. 27,382) followed, relating to ornaments which were held to have been improperly classified as jewelry under Par. 434, tariff act of 1897. Similar decisions have been rendered on the protests of Abraham & Straus, A. Steinhardt & Bro.; A. H. Veith, Jules & Hugo Rosenberg and B. Blumenthal & Co.

Burglars recently entered the store of W. Herick, Glenfield, N. Y., and stole watches, rings, etc., valued at about \$500. Entrance was gained by removing the putty from a rear window and breaking out half of the window pane. The thieves are believed to have been professionals. None of the watches which had been left at the store to be repaired was taken.

[IN WHICH IS CONTAINED A LIST OF THE LATEST PATENTS GRANTED BY THE UNITED STATES AND GREAT BRITAIN, THE UNITED STATES PATENTS THAT HAVE EXPIRED AND THE REGISTERED TRADE-MARKS.]

UNITED STATES PATENTS.

ISSUE OF JULY 3, 1906.

824,790. FOUNTAIN-PEN. STEWART W. JAMESON, Kansas City, Mo. Filed Oct. 4, 1905. Serial No. 281,356.

A fountain drawing-pen, comprising a font, a threaded plug portion fitted within the same, and having a projection at one end which is provided with an elongated opening, blades pivotally

mounted upon said plug portion, and a threaded shell fitted over said plug and adapted to frictionally engage the outer edges of said blades.

824,832. TEMPLE-WIRE FOR SPECTACLE FRAMES AND MOUNTINGS. Louis J. Teller, Providence, R. I., assignor to Charles A. Wilkinson, Warwick, R. I., and Dutce Wilcox, Providence, R. I., trading as C. A. Wilkinson & Co. Filed Dec. 22, 1905. Serial No. 292,977.

The improved temple-wire herein described having the cylindrical stem portion A and the integral

ball or tip B on one end thereof, all made of a compound stock consisting of a gold plate soldered on base metal, which temple-wire is so constructed that its exterior portion consists of said gold plate and the interior portion consists of said base metal.

824,745. BELT HOLDER. HENRY SALISBURY, Brooklyn, N. Y. Filed Aug. 8, 1905. Serial No. 273,273.

The combination with a garment, of a belt loop therefor comprising a strip having tongues at its ends engaged through the garment, the end por-

tions of the strip being bent to bring the central portion thereof into spaced relation to the garment for the passage of a belt between the loop and the garment, an attaching plate engaged with the tongues at the opposite side of the garment from the loop, said attaching plate having perforations in which the tongues are received and a suspender receiving device carried by the inner

face of the attaching-plate, said tongues being bent to extend away from each other over the inner surface of the attaching-plate.

825,153. PEN FOR FOUNTAIN-PENS. VICTOR L. OCHOA, Roseville, N. J., assignor of one-half to Benjamin A. Jackson, New York. Filed Sept. 23, 1905. Serial No. 279,777.

A pen having a longitudinal depression or groove in its upper surface extending from a slit to the

heel, in combination with a top piece having a grooved portion and an ungrooved portion forward of said grooved portion, a ridge at the under side of the grooved portion, said ridge entering the groove in the pen-body.

824,773. EARPIECE. EDWARD L. AIKEN, East Orange, N. J., assignor to the New Jersey Patent Co., West Orange, N. J. Filed June 12, 1905. Serial No. 264,754.

As a new article of manufacture, an ear-piece

comprising a cup or disk having a central aperture, a tube in said aperture and a wire pinning said tube to said cup and curved to fit over the ear.

825,184. KEY-HOLDER. EDWARD J. BRANDT, Watertown, Wis., assignor to the Brandt Cashier Co., Chicago. Filed April 8, 1904. Serial No. 202,205.

In a key-holder, the combination with a plate having a minor portion of its periphery cut away, of a spring-tongue fast with said plate at one end

and overlying said cut-away portion of the plate to form an inclosed space, the free end of said tongue overlapping the plate at one end of said cut-away portion.

825,190. COMBINED SHOPPING BAG AND

SKIRT-HOLDER. GIROLAMO COMI Cobalt, Conn. Filed March 13, 1906. Serial No. 305,785.

The combination with a shopping-bag and means for supporting the same from the belt of the

wearer, of a pair of levers pivoted to one side of said bag, said levers formed at their upper ends with operating-handles and connected at their lower ends with gripping-jaws.

825,212. NAIL-FILE. AUGUST HENKEL, Newark, N. J. Filed March 7, 1905. Renewed May 26, 1906. Serial No. 318,953.

A device of the class described, comprising a handle having a rigid back and a foldable blade, one of said parts being provided with an inclined

slot having a continuous marginal wall and the other a fixed pin entered through said slot for permanently attaching the blade slidably and pivotally to the handle, said slot serving through movements of the pin therein to positively move the blade transversely into and out of contact with the back of the handle.

DESIGNS.

38,111. RING. CHARLES H. PFEIL, Chicago.

Filed March 26, 1906. Serial No. 308,180.
Term of patent 14 years.
The ornamental design for a ring as shown.

UNITED STATES PATENTS THAT HAVE EXPIRED.

[Reported especially for THE JEWELERS' CIRCULAR-WEEKLY by R. W. Bishop, Patent Attorney, Washington, D. C.]

Issued July 9, 1889.

106,435. CUFF-HOLDER. J. C. EMERSON, Waterbury Centre, Vt.

106,513. WATCH. G. F. JOHNSON, Aurora, Ill.

106,655. APPARATUS FOR TESTING WATCH BALANCES AND HAIR SPRINGS. JOHN LOGAN, Waltham, Mass.

106,702. WATCH-WINDING MECHANISM. W. N. CLIFFORD, Waltham, Mass.

106,735. FORK. D. J. HUCKINS, East Boston, Mass., assignor of one-half to E. D. Hovog, same place.

106,769. SIGNAL TRANSMITTER AND TIME INDICATOR. A. J. REAMS, El Dorado, Kans.

106,816. WATCH CASE. E. C. CHAPPELLE, Philadelphia, Pa.

106,811. CUP FOR MARMALADE PACKAGES. LAZARUS KOHNS, New York.

Designs issued July 5, 1892, for 14 years.

21,680. STATUETTE. CELIA M. SMITH, Ill., N. Y.

21,682, 21,683, 21,684 and 21,685. PLATES.

- C. E. HAVILAND, Limoges, France.
21,686. CUP. C. E. HAVILAND, Limoges, France.
21,687. COVER-DISK. C. E. HAVILAND, Limoges, France.
21,688. BADGE. J. K. DAVISON, Philadelphia, Pa.
21,693. KNIFE-HANDLE. F. J. KALDENBERG, New York.
Design issued July 11, 1899, for 7 years.
31,171. PENCIL-CASE. FRANK MCINTYRE, New York, assignor to the Eagle Pencil Co., same place.

BRITISH PATENTS.

(ABRIDGMENTS OF SPECIFICATIONS, 1905, FROM *The Illustrated Official Journal.*)

ISSUE OF JUNE 27, 1906.

- 3,903.** TELESCOPES. W. OTTWAY, Ealing, London, W. Feb. 27.
 Relates to a method of lighting-up the cross-wires in a sighting-telescope. The body of the telescope is fitted with a lateral and inclined tube *d* in which is an electric lamp, or other suit-

able source of light, the rays from which are concentrated by a lens *l* upon an aperture *n*. The rays passing through the aperture *n* are converged by a lens *m*, Fig. 4, so as to illuminate the center of the cross-wires only.

- 3,998.** MAGIC-LANTERNS. W. H. EVERSON, Westminster, Feb. 25.

To produce stereoscopic effects in pictures projected on a screen from optical lanterns, a shutter is arranged to project alternately a pair of pictures in stereoscopic relation and to give between successive projections a period of total obscuration equal in time to that of a single projection. In the arrangement shown in Fig. 1, a revolving disk *D* provided with suitably-spaced apertures is

mounted in front of the lenses *P*, *P*² of a lantern *L*. Instead of a disk, moving endless bands provided with similarly spaced apertures may be employed; or disk or band shutters revolving in opposite directions may be used. The provisional specification states that a wheel, fan, shade, stop, drum, or cylinder may be used instead of the disks or bands, and that these may be applied to a double lantern or to two lanterns, or the light of the lantern may be "put out" and exposed alternately.

- 1,063.** TELESCOPES. W. OTTWAY, Ealing, London, W. Feb. 27.

Relates to panoramic eye-pieces for sighting telescopes, with illuminated cross-wires, such as are described in Specification No. 3903, A.D. 1905, in which the variation of the magnifying-power is obtained, without disturbance of the focus, by simultaneous and differential longitudinal move-

ments of the two lenses forming the erecting-system, and in which the focal plane of the object-glass is outside the eye-piece. To the rotatable sleeve *g* is fixed a tube *c* in which grooves *d*, *e* are formed. Within the tube *c*, which is enclosed by a longitudinally-slotted tube *m*, the sleeve *h*, carrying the erecting-lens *i*, is adapted to slide. Feathers *k*, *k*¹ on the sleeve *h* engage with the slots *l*, *e* respectively, while a feather *n* on the tube *m* engages with the slot *d*. As the sleeve *g* is rotated therefore, and with it the tube *c*, the lenses *k*, *f* are traversed along the axis to adjust the magnifying-power without disturbing the focus. The eye-lens of the eye-piece is adjusted independently by a pin-and-slot action, similar to that described in Specification No. 9411, A.D. 1899. Reference is also made to Specification No. 17,843, A.D. 1897.

- 1,202.** TELESCOPES. G. N. SÆGMULLER, Washington, D. C., U. S. Feb. 28.

Fig. 1 shows a section of a telescope fitted with an eye-piece in which the cross-wires *G* are mounted between two thick lenses *E* and are illu-

minated laterally through an opening *H*. The edges of the lenses *E* are silvered to throw light on to the cross-wires from all sides. The usual eye-lens is replaced by two achromatic lenses *F*. The necessary construction data for the lenses *F*, *E*, are given in the specification.

- 1,269.** BROOCHES. E. MURREL, London.
 March 1.

Brooches designed to support watches are

formed with spring hooks *b*, carried round to the back of the body *a* of the brooch and adapted to receive and hold securely the bow *d* of a watch *c*.

Complete specifications accepted June 20, 1906.

- 12,340.** VEIL RETAINER. FLETCHER.
12,604. CLOCK. WETZEL.
16,125. FIELD-GLASSES. BARTON.
21,377. POCKET-KNIFE. MANDEWIRTH.
 1906.

- 696.** UMBRELLA. MCGUIRE.

- 3,387.** MATCH BOX. REYNOLDS.

Applications filed June 11 to June 16, 1906.

- 13,527.** UMBRELLA-FRAME. RICHARD FAWCETT and W. L. HOLLAND, Manchester.

- 13,715.** MATCH BOX. GEORGE ARKINSTALL, Birmingham.

- 13,781.** HAIR-PIN. ANTON THISSEN, Flinsbury, London.

ELSIE BEE'S FASHIONS.

NOVELTIES SEEN IN A LADY'S RAMBLES AMONG THE JEWELERS.

FASCINATING little gold mesh purses just the size required for car fares are a very useful trinket to find place in the shopping bag.

Turquoise matrix is seen as the center for little pins, brooches or ornaments in conjunction with open work in diamonds.

Very beautiful is an extremely long string of round matched pearls which is finished with a clasp formed of four large diamonds.

One of the oddest brooches seen for some time is an oblong half-round turquoise set entirely free, with the exception of four diamonds, a single stone being at either end and at the top and bottom.

Of artistic character and essentially refined in expression is an exquisite ornament embodying an extremely large pear-shaped Oriental pearl as an important center for the surrounding fancy scrolls in diamond work, which form a most effective alliance.

A diamond collarette representative of one open style consists of a serpentine vine with each curve containing a single cluster of conventional leaves that fills but little of the space, effecting a daringly severe conclusion. A row of diamonds at the top and bottom form the edges of the design.

Exquisitely manipulated in diamond work are some new designs that strike a distinctly original note in close effects. A subtle *cachet*, arrived at by means known to the elect, distinguishes this most delicate style. A notable example is shown in a pendant in which the central stone is a marquise shape framed in small diamonds and set in a figure which might well have been copied from some beautiful fine lacc.

A word or two about new designs in very thin, large watches. Delightfully novel are the cases, beautifully enameled in some fine conventional pattern, almost or entirely filling the space, in which two, three or more colors are employed. A unique feature consists of delicate enameled chains, in the new flat style, which are attached. These short chains are formed of very narrow, thin, enameled shapes with round or pointed ends connected by pegs or gold links and matching the case, as in the style of some small watches recently noted.

A necklace that is wholly individually and eminently stylish shows a very narrow, close, lace-like diamond band set with three diamond clusters spaced across the front. To each cluster is attached a single large diamond topping an ablong drop-stone. Two choice opals about an inch in length, with a somewhat longer one in the middle, the shapes being narrow at the top and closely attached to the diamonds from which they swing, complete this elegant new design.

ELSIE BEE.

Mainspring Don'ts

Simple Hints for Those Who Handle Mainsprings

Don't fail to provide yourself with the best mainspring winder that can be obtained. See that the hooks on all arbors of the winders are no longer than the thickness of the thinnest spring, and thus avoid kinking, and therefore unnecessary breaking of mainsprings.

Don't use a mainspring that is too long, because it fills the barrel and prevents that part, or the mainwheel, from making the required number of revolutions, with the consequence that the watch will not run as it should after each winding.

Don't use a mainspring that is too strong, because it will set, increase the percentage of breakage and injure the watch.

Don't use a mainspring that is too wide, and be sure that the tip and brace do not extend beyond the limits of the cover and barrel.

Don't forget that a mainspring should not occupy more than one-third the diameter of the barrel, thus leaving two-thirds to be divided between the arbor and winding space, to enable the watch to run about thirty-six hours.

Don't expect a mainspring to be flat if you put it in the barrel with the fingers. This method usually injures the spring, gives it a cylindrical form, and thereby increases the friction in the barrel.

Don't bend the inner or outer end of the mainspring with flat-nosed plyers, but provide yourself with specially made round-nosed pliers which will give a circular form to these parts, prevent short bends, contract the inner coil, and thus secure a closer fit to the barrel arbor without injuring the spring.

Don't expect other than a properly fitted flat mainspring with rounded edges to produce the least friction in the barrel, allow the greatest amount of power to the train, and give the best results as to time, service, etc.

Don't expect a mainspring to always endure extreme changes in temperature, or electrical disturbances, or straightening at full length, or neglect from lack of cleaning and oiling.

Don't expect a watch that needs cleaning or other repairs to run satisfactorily by merely putting in a new mainspring.

Don't expect a mainspring to plough through too much dirt.

Waltham Watch Company

Waltham, Mass.

THE HOROLOGICAL REVIEW.

Watch Repairing.

By H. REINECKE.

(Continued from issue of June 6.)

A MOST convenient tool as a supplement to the turns described in the issue of June 6 is the Jacot tool, which is used for finishing pivots after they have been turned to the proper size and shape in the turns. It is also used by watch repairers for repolishing pivots which have been injured by wear. While one pivot is centered on a fixture with a female centre corresponding in line with the rut or groove, where the damaged pivot is to be repaired, a suitable burnishing file does the work while the pivot is rotated by bow and pulley, or

the pivots only, the other for reducing their length and rounding up their ends. The end used for the first operation generally has nine facets on it, each having a compound groove in the center. The grooves intended for the final burnishing of the pivots are carefully graduated in size, their total number comprising the usual run of watch pivots. To use, first select one of the grooves sufficiently large and place it uppermost; then put the pinion or staff to be operated on against the female center, with the pivot to be finished lying in the groove of the opposite center, this being adjusted until it very nearly touches the shoulder; then lay the pivoting file on the pivot to keep in the groove, and with the

eter of the center, close against its end, forming a rest for the edge of the file.

In the hands of an experienced pivoter this guard piece has, no doubt, prevented many breakages, and he may dispense with the use of it except in special cases. The reverse end of the described one is generally protected by a brass cap, as it carries a very thin disc pierced on its edge with

FIG. 1.

by a pulley fitted with a carrier as shown in the illustration, which represents the tool with all its accessories.

For finishing pivots on a new pinion or balance staff some watchmakers use only the turns, and finish them with the graver, finally using red stuff to polish them with. In the Jacot tool, however, it is usual to use a pivoting file, which has a very fine cut. With this the pivot is reduced in size and at the same time made quite parallel. While this is being done, the pivot does not rest in the final groove, where it is brought to accurate size by a burnisher shaped like the file, but without any teeth. It is then only expected to fit the number of the gauge corresponding to the number of the groove. This gauge is shown in the left upper corner of Fig. 1.

The Jacot tool has generally four centers or runners, two of which are useful at both ends. One end of each of these centers is used for treating the diameter of

drill bow revolve the pinion or staff, moving the file backwards and forwards. This is continued till the diameter is reduced to the level on which the file rests, and if it is desired to still further reduce the size of the pivot the facet must be moved to a division with a lower number, and so on, until it is finally the size required. In every case great care must be taken to keep the edge of the file in the corner of the pivot, so that the shoulder will be left square, and when the file is no longer needed the burnisher must be used, lubricated with a little thin oil, to finish the pivot. When the shoulder of the pivot is small and the file apt to slip along the staff, which might cause the pivot to break, it is customary to use a guard piece, which is sold with the Jacot tool. This guard piece is seen in the upper right-hand corner of Fig. 1. It is adjusted and fastened to the center by a set screw, and it has a small finger projecting just above the diam-

eter of the center, close against its end, forming a rest for the edge of the file. In its use the pivots to be shortened and to have their ends rounded up are revolved in one of these holes with a little freedom, for which operation suitable tools are provided.

The fourth center, seen in the left-hand lower corner of Fig. 1, is used only on one end, where it has four facets and grooves. These grooves are for the finishing of fourth wheel pivots, which carry second hands. They are made proportionally long, and so formed that the pivots finished on them are slightly tapering.

A convenient attachment, which may be made by an operator, is a loose steel pulley, fastened on a brass boss by a friction tight ring, which boss is threaded on its center for the purpose of being moved for-

FIG. 2.

The Balance of Business

Indispensable to modern life, the Elgin Watch is ever in increasing demand—and the balance of business goes to the store that carries a full stock of Elgin Watches.

See Jobbers' list for prices or write the Company.

Every dealer is invited to send for the Elgin Art Booklet, "Timemakers and Timekeepers," illustrating the history and development of the watch.

ELGIN NATIONAL WATCH COMPANY

Factories, Elgin, Illinois, U. S. A.
General Offices, 131 Wabash Ave., Chicago.

New York Office, 11 John Street.
San Francisco Office, 206 Kearny St.

ward or backward on a screw shank, forming a female center and fastened to the back runner of the tool; this brass boss is recessed on its back, to make room for a steel jam spring, which is also threaded in its center and may be set up against the brass boss, to prevent its shifting when the loose steel pulley with the carrier pins is revolved in finishing the pivot of a pinion with a wheel or a balance staff pivot with the balance attached. The runner, with this attachment, is shown in Fig. 2.

Fig. 3 represents a section of either a pivot file or burnisher for straight pivots,

FIG. 3. FIG. 4. FIG. 5. FIG. 6.

which may be had for either right or left-handed operators. In Fig. 4 is shown the same for conical pivots. Fig. 5 represents a section of a burnisher for cutting back shoulders, a tool seldom used. Fig. 6 is a section of a burnisher for rounding up and finishing the ends of pivots.

For shortening pivots a pivoting file or any other very smooth Swiss file may be used.

A Rough Depthing Tool For Clockmakers.

IN a recent issue of the *London Horological Journal* the rough depthing tool illustrated below was described by Thomas Schmitt. It has been used in a more simple form for some time, and is a most useful tool for clock makers and repairers.

Speaking of the device, Mr. Schmitt said: "Some time ago I had to make a dead beat escapement for a regulator, and not having a suitable tool I invented this simple con-

SIMPLE ROUGH DEPTHING TOOL.

trivance which, for pitting pallets, I consider more handy and convenient than the rather costly depth tool. I took two strips of brass, about seven inches long, and riveted them together at one end; at the other end I provided and united them with a segment of a circle with an adjusting screw.

"The use of this tool needs hardly any explanation. You drill holes at convenient places, adjust depth, measure it from center to center and transfer it to the clock plate. A similar tool may be adapted to examining the depthings of going barrels, center wheel pinions, etc.

Philip Diels, Marion, Ind., has moved into more commodious quarters in the Spencer building.

The History of Church Bells.

By C. W. CUMBLE.

AS to the history of church bells, Polydore Virgilius records the hanging of bells in towers as originating under the patronage of Paulinus, Bishop of Nola, in Campania (Italy) in the fifth century. But Kraus informs us that church bells were first introduced into Europe during the ninth century. Monks were called to their devotions by the blowing of trumpets or the rapping with a hammer on the cell doors after the days of Constantine, who died A. D. 337; and clappers were employed in those days—not bells—in the eastern church. Some claim for Pope Sabinianus (A. D. 604) the origination. King's College, Cambridge, England, has the proud distinction of having the first reliable account of a peal of bells. This refers to Pope Calixtus III., in 1456, presenting that institution of learning with a peal of five bells.

With doubt surrounding the date and origin of the church bell itself, our knowl-

THE LIBERTY BELL.

edge extends to the fact that some time since its origination as an ecclesiastical church equipment the name of *campana* was given to the church tower bell, after the name of the tower where Nola was said to have started the custom. And the title *campana* has remained the designation of church bells ever since, in contradistinction to the *tintinnabula* (literally tinkling bells) or small bells for general use. Hence also we get the term *campanology* for the science of bell founding and ringing.

Well can we account for the odor of religious sanctity that surrounded the church tower's peal of bells when we bring back to memory the fact that these loud messengers of the Faith were christened under most formal ritual. Suppose we give an epitome of the Campana Baptismal rites for the benefit of those readers who feel a real interest in campanology. The ceremony commenced with the washing, by the Bishop, of the bells, both internally and externally, with a cloth dipped in holy water, while the choir sang the 145th and 146th and following Psalms. Next the bells were anointed with holy oil, the choir chanting the antiphon "Vox Domini super aquas multas"

together with the 28th Psalm. The bells are then anointed again exteriorly, in the form of a cross, seven times, and at four equal intervals with the "Oil of Chrism." Before this part of the ceremony the "oleum infirmorum" has been used. Incense is now put in the censer and placed beneath the bells. The antiphon "Deus in Sanato via tua," etc., is sung, several prayers are said, and then the deacon sings part of St. Luke (chapter 10). The ceremony is ended by the bishop making the sign of the cross on the bells.

But not every bell received such santonious rites, for we read that Marlborough's (England) big church bell, about 60 years ago, upon being recast was turned upside down and filled with beer for the country bumpkins to fill up on in company with the craftsmen who cast it.

One of the beautiful ancient customs was that of dedicating a certain bell to specific religious duties. Thus we have the "Sanctus" bell rung on the elevation of the Host, later named the "sacring" or "sacramental" bell; the "Lyche" or "Corse" bell was rung during the funeral procession; the "passing" bell was tolled to call for prayer of intercession on deathbeds. The large "sacring" bell has given place to the small "sanctus" bell rung by a priest's attendant in Catholic churches. It is hung in an outer turret, and calls for genuflexion.

And we must not forget the "Vesper" bell toning for evening prayer, or the "Angelus" (or Ave Maria) bell, which gives voice at the hours fixed for offering supplication to the Virgin. The "Complin" bell is used to summon the devoted to the day's final church service.

History tells us that potentates showed their anger and imposed punishment sometimes by taking away the peal of bells—a degradation much felt by that town's inhabitants. Mentioning this form of punishment reminds one of the story of the stern Oliver Cromwell, who, when he arrived before the antagonistically energetic town of Cork, ordered the removal of all the big bells and their conversion into artillery. Upon being remonstrated with for the harshness of such a sentence, he broke his naturally immutable austerity with a joke. Said he: "Since gunpowder was invented by a priest, the best use for bells is to make 'canons' of them."

As a representative of Meneely & Co., Troy, N. Y., informed the writer, in reply to the question whence to obtain particulars on the interesting but obscure subject of campanology: "There are books on bell founding written when the world was much younger than it is now, and what they say is of little practical use nowadays, for a great deal is legendary and cannot be relied on. Books that are written on this subject at all are generally written to describe some bell or bells. * * * You might refer to any encyclopedia in a public library, and on reading several pages from each of two or three you will be convinced of the accuracy of our statements that books on the subject are not reliable."

However, the writer has "dug up" authentic information emanating from an up-to-date campanist and practical bell founder, with facts sufficient to appease most searchers after bell-founding secrets, and

SPECIAL REQUIREMENTS IN WATCHES

NOT ONLY are these Offices equipped to meet the general needs of the Trade, but to supply such particular requirements as may arise from time to time. You will not be told that the movement you want is "not carried." You may have had that experience elsewhere. Every standard make of movement which is in demand is to be found here. the fact of their exclusive character should certainly not detract from the merits of their enunciation.

Concerning the general laws pertaining to bell science a few axioms might be mentioned, such as follows:

The weight of the bell governs its tone; heavier bells have deeper, more majestic, dignified tone. The popular belief that the distance the bell vibrations carry increases in proportion to weight is strictly erroneous—the sharp, shrill sound from the small bell penetrates further proportionately than the mellow, low, "church-going" tones of the big bell. A 100 or 200 pound school or factory bell often is heard from a much greater distance than a 1,000-pound bell in a church tower. As to distance records, the 22,000-pound bell (the largest ever cast in the United States) that hung in New York's City Hall till it was fractured, is said to have been heard as far as 13 miles up the Hudson. Bells of 4,000 pounds or over in open, unobstructed country location are often heard 10 or 12 miles away.

The encyclopedias and dictionaries state that the alloy for bell metal consists of three parts copper to one part tin mainly, but at times contains small amounts of zinc, lead, iron, silver, bismuth and even antimony. Experts in bell founding are these days unanimous and outspoken in their dictum that other metals than copper and tin are distinctly injurious to every qualification desirable in a church bell; that experiment proves silver to deaden the vibration and tone. Most bell founders declare that in their searches by analysis in old bells they have never found silver and rarely any metal beyond copper and tin, except possibly as impurity.

And now for a few trade secrets in bell founding. First as to measurements. A primary rule in designing of bells is that a bell of a given weight is of given diameter and thickness. A ton bell should have a diameter of four feet at the mouth, be three and a half inches thick at the "sound bow" (the thickest part of the bell; see sectional view). A hundredweight bell should be 18 inches in diameter and an inch and a quarter thick. This is considered by many, if not all, experts as an absolute rule. The bell having a uniform thickness throughout will produce unpleasant sounds. The "sound bow," or brim, must be the thickest point, tapering to perhaps a third of this.

Having worked out the design and dimensions, the next operation is to build the mould in which to cast the bell. The usual method is to dig into the ground and form what is known as the "pit." A "core" is next built up of bricks and loam the exact shape of the inner surface of the desired bell. This is dried in an oven and then placed in the pit. In similar fashion the "case" or "cope" is built to exactly represent in form and size the outer surface of the bell. On this "case" the inscription is formed. After thoroughly drying, the "cope" or "case" is lowered into the pit, thus leaving a space between "case" and "core" which exactly conforms in shape and size to the bell that will be cast when the molten metal is poured in.

The modern casting method differs from the old, inasmuch as it is done above ground

in iron perforated "venting" cases. The illustration graphically shows this improved apparatus, by which it is claimed a more perfect and solid casting is obtained and thereby greater perfection in tone.

A sectional view of a conventional church bell is shown herewith, affording readers a clear conception as to the location of the thick "sound bow," etc. The general law of proportion ruling is as follows: The

PERFORATED VENTING CASES.

"sound bow" is one-eighteenth the diameter in thickness; height of shoulder, 12 brims; width at shoulder, $7\frac{1}{2}$ brims, or half width of mouth. All, of course, are subject to variation. And now, having our mould adjusted, wet let the molten stream fill up the narrow channel, and in a few short moments we have a casting that has cost days and even weeks to calculate and

SECTION OF BELL SHOWING VARYING THICKNESS.

prepare. Next we must wait for the metal to cool before taking the mould apart. A one-ton bell remains hot to the touch for two or even three days, while a hundredweight bell cools off quick enough to be dug out next day.

But our task is not by any means yet over, for while as a rare exception the tone of the newly cast bells may be correct, "tuning" is nearly always necessary. When a peal of bells is cast to the exact tone needed it is called a "maiden peal." And this "tuning" to correct deficiency is a secret supposed to be inviolable in the bell foundries. To make the tone flatter some of the thickest part of the bell's interior is shaved off. This can be done to the extent of flattening a half to even three-quar-

ters of a note without injury to the bell's qualities. In the case of chimes the necessity of perfect harmonizing of each bell is apparent, and the tuning operation is an exceedingly delicate one—so much so that in preference to sharpening a bell most foundries will place aside for stock a "flat" bell and cast another. The method of sharpening the bell's tone is to shave off the bottom or rim; it is generally a failure. For "tuning" the bells are fixed mouth upward and held with powerful vises.

Lastly, we have to select a hammer or clapper, which also must be done with method. The rule is: Ratio of hammer weight to its bell to bring out its full tone is one-fortieth. This cannot be safely exceeded. It is not necessary that chime hammers should be as heavy as this proportion.

This done, our bell is equipped, and CIRCULAR-WEEKLY readers have about all the knowledge they probably care for concerning the art and craft of campanology.

New Observatory Planned by the Waltham Watch Co.

THE new observatory which is to be erected at the factory of the Waltham Watch Co., Waltham, Mass., will be equipped with all the latest improvements and the most delicate instruments which can be found in this country or abroad for obtaining the most accurate measurement of time.

Owing to the improvements which are now in progress at the plant, a change of site of the present observatory was necessary, and it now stands on its new location north of the steel wing. This is only temporary, however, and will be discontinued after the new observatory is erected.

Great Clock for Norfolk, Va.

NORFOLK is to have a clock, said to be the largest in the world. It will be 140 feet from the ground, in a tower on the Garrett Winery. Its dials will be 25 feet in diameter, and they will be so arranged that the time may be told from any point in Norfolk harbor, the cities of Norfolk and Portsmouth or their suburbs for several miles around that part of Virginia.

No record can be obtained of a timepiece anywhere in the world as large as this will be. Plans for the clock tower are now being drawn.—Baltimore Sun

There is in the possession of the Czar a very remarkable watch. It was made by a Polish mechanic named Jules Curzon. The late Czar had heard some wonderful tales about the inventive ability of this man, and, wishing personally to test his skill, he sent him a parcel containing a few copper nails, some wood chippings, a piece of broken glass, an old cracked china cup, some wire and a few cribbage-board pegs. Accompanying this was a command to make them into a timepiece. Within a remarkably short time the Czar received them back in the shape of a watch. The case was made of china and the works of the other odds and ends. So pleased and astonished was the Czar that he sent for the man, conferred several distinctions on him, and granted him a pension.

This illustration shows our main factory exactly as it exists, where 3,000 complete watches are made daily.

LANGENDORF WATCH CO.

CHAUX-DE-FONDS, SWITZERLAND.

It will be of great interest to every jeweler to learn that we are devoting our full attention to this market. The existing conditions in the watch trade have convinced us that there is a long felt want for moderate priced, but accurate Swiss Watches.

We wish to call your attention to our LONVILLE MOVEMENT. It has a lever escapement and is being made in Os, 12s and 16s, fitting perfectly all American cases. This movement is salable and profitable. Our Watches and Movements will be introduced in this market bearing the following names:

OPTICAL DEPARTMENT

The Estimation of Vision in Infants and Children.

THOUGH it may be upon rare occasions that the optometrist is called upon to examine very young children's eyes, he is nevertheless at times in that position and should be familiar with the means for conducting such tests.

In the cases of infants, the requirements can only be to note whether or not the child sees at all. Of course, a child does not begin to "fix" ordinary objects until it is a few weeks' old at least, but experiments have shown that a baby only a few days old may respond to the flash test, if vision be there. The test is made in a dark room by flashing light from a mirror into the child's eyes. It is safe to assume that all children three months or more old who do not respond to the flash test are either imbecile or idiotic. Naturally there is no possibility of estimating the visual acuity in very young children.

In older children, however, say between the ages of one and five, the acuity of vision, it is claimed, may be approximated closely by ascertaining the distance at which familiar objects, as toys, for instance, can be recognized. Worth has devised a reasonably accurate means, employing five ivory balls, varying in size from one-half an inch to one and a half inches in diameter. These are first given to the child to play with, to whom they soon become familiar. This point gained, the balls are placed upon the floor, at a distance of 20 feet from the child, the largest first, and so on in order to the smallest. The child is told each time to go and pick up the ball. By careful observation the one making the test can readily tell by the manner in which the child starts off whether he really sees the ball before he starts or is only going to look for it. In making this test it is presupposed that the child can walk.

To the writer this does not seem a method that may be depended upon for exact findings, because though a patient often cannot name the letters on the normal line of type he can tell you that there are letters or some black characters there, and the child therefore may see the smallest ball well enough to start in its direction, but at the same time he may not see it clearly. In fact, the small ball would seem larger to the child with defective eyes than it would to the one with perfect eyes on account of the circles of diffusion that would be formed on the retinae of imperfect eyes.

It would seem, therefore, that no reliable subjective test can be made unless the child is old enough to count or read. Most chil-

dren learn to count orally before learning the alphabet or even before recognizing numerical characters, so it might be possible to approximate usual acuity by having the little one count how many dots there are in various groups, these dots to be graduated so far as possible on the basis of the five-minute angle.

The open or broken O test is a valuable one for children's cases. You can explain to the child that the O (through being broken it looks more like a C) is a fence and that the opening is a gateway; then by asking the child where the gate is in various sized lines of these broken Os, a really fair estimation of the visual acuity may be arrived at.

Skiascopy is, on the whole, perhaps, the most useful method of testing. To keep the child's attention fixed have it look at some bright object, as a red or green colored light, or use the method suggested by R. M. Lockwood in his latest book, "Skiascopy Without the Use of Drugs," wherein a second mirror is attached to your skiascopic mirror, in which the patient may look at some properly placed object which moves as you rotate the mirror and which, therefore, holds the attention remarkably fixed.

The ophthalmoscope is of little practical value in estimating any case, so in children, where the accommodation is very active it is often of no use. E. L. R.

The Ability to Prevent Errors of Refraction.

THE real optometrist is not only he who can correctly diagnose and overcome refractive errors but who is also endowed with a full sense of the importance of preventing these conditions. The report of the case of a boy living in Paterson, N. J., is at hand, stating that the boy has become totally blind from eating too much candy containing aniline compounds as coloring matter.

Innumerable cases of loss of vision from the use of tobacco and alcohol are known. Muscular imbalances, astigmatic conditions, contracted myopia, are often due to reading while lying down or sitting at a desk or table that is either too high or too low.

Attempts have been made by optometrists in many cities to impress the school authorities with the importance of providing adjustable desks and seats for pupils. These attempts have met with some but not general success, and no better means can be found for advancing these ideas than by educating the public, who will soon see to it that these conditions are improved. Therefore it behooves every optometrist to enlighten parents and impress upon their

minds the importance of making their children take and receive proper care of their eyes in these respects.

The dangers attendant upon the use of tobacco and alcohol, of wrong postures, of poor illumination, and of eating highly colored candies are a few of the facts that should be drummed into everyone, and in such a convincing way as to make this warning effective. Do not think that you have done your whole duty when you have provided the proper lenses for an existing refractive error, but tell your patient how he may help prevent further trouble and, if possible, tell him how his trouble originated so that he may guard his children or acquaintances against similar errors. Being naturally interested in eyes when he comes to you, give him all the data you can and he may be depended upon to disseminate that knowledge and thus enable you to be indirectly useful to mankind in a broader sense than you are when you help one single individual.

Take a broad view of your work; don't smile at harmful conditions and think "it will create more glass wearers and help my business." You will lose in the long run if you take that selfish, narrow view. It is well understood that the real work of the physician is to prevent not to cure diseases, and in China the physician is paid while he keeps a family in good health and while administering to the sick he receives no remuneration.

Taking the selfish, interested view of the matter—a normal man has no objection to helping mankind, if it costs him nothing; there is a pleasure in feeling that you have helped raise the general welfare without lowering your own. Well, then, the good that you can do by spreading this preventive knowledge will not be realized in this generation, therefore it will not reduce the number of glass wearers for you, it is the next generation of optometrists that will have a better class of eye conditions to contend with, but you can best afford to do your work manfully, honestly and thoroughly, and let the next generation of optometrists take care of themselves.

Announcement.

A committee of New York optometrists has volunteered to gather and make at home all those leaving for Rochester from New York who do not come with delegations. A large party will leave the Grand Central Station on the 1.02 p. m., on the "Second Empire," Sunday, July 29. Every optician is requested to wear upon his lapel a small piece of blue ribbon, so that all may be easily recognized.

Who Sells Eye-Fix?

NEARLY everybody in the trade. In less time than any other eye remedy on the market accomplished the same end, EYE-FIX has demonstrated its worth to jobbers, retailers and consumers. There is no just reason for prejudice against this article. Every dealer who wishes to best serve his own interests can handle EYE-FIX successfully. It sells on merit, invariably gives satisfaction and allows a big profit. Sales are going ahead by leaps and bounds. Why not share in this substantial prosperity? Get on the winning side of the eye remedy proposition. If you haven't already stocked EYE-FIX will you please tell us why?

Anatomy of the Nervous System.

(Lecture recently delivered before the Rochester Optical Society by DR. RALPH H. WILLIAMS.)

(Continued from issue of July 4.)

THE diagram shows the source of a nerve impulse in the skin through the double branched sensory fibre which originates in the bipolar cell of the posterior root. You will note that there is no continuity of fibres, but a contiguity. The tracts of nerve fibres in the cord are divided into two classes, according to the direction in which they degenerate on section, in tracts of ascending and descending degeneration.

The tracts of ascending degeneration are those which arise from cells towards the periphery, and are transmitting impulses either to the brain or to higher levels in the cord. They are, in other words, the sensory columns.

The tracts of descending degeneration are those which arise from cells either in the brain or upper levels in the cord and are transmitting afferent impulses, that is, impulses to the periphery. The tracts of descending degeneration are practically confined to the tracts on each side known as the crossed and direct pyramidal tract and the antero-lateral descending. The cross pyramidal tract is located just in front of the posterior horn of the gray matter.

The direct pyramidal tract is situated next to the anterior median fissure of the cord. These two tracts originate from cells in the cortex of the brain and as they pass downward the greater part of them cross over in the medulla coming to the opposite side and forming the crossed pyramidal tract, the balance coming down on the same side as the direct pyramidal tract, but crossing over to the opposite side of the cord at various levels lower in the cord, so that they really supply structures of the same side of the body as are supplied by the crossed pyramidal tract of the other side.

The antero-lateral descending column is a large mixed column, not all of its fibres passing in the same direction, and it is believed that this column contains fibres which connect together various levels of the cord without penetrating direct to the brain or to the periphery.

The tracts of ascending degeneration are four in number, on each side: the columns of Goll and Burdach, which lie between the posterior horn of the gray matter and the posterior median fissure, the column of Goll lying internally and increasing in size from below upward, and the direct and ventral cerebellar tracts which lie around the outer portions of the anterior and lateral aspects of the cord.

The columns of Goll and Burdach carry sensory impulses from the periphery into the cord, throwing off laterals at various levels and finally terminate around cells in the funiculus cuneatus and gracilis at the medulla oblongata, which I have already described. The fibres of the column of Goll are comprised principally of fibres from the legs having started in the column of Burdach and by degrees having passed into the column of Goll.

Before mentioning the direct cerebellar tract I must call attention to a column in

the gray matter of the cord known as Clark's column. It is indicated on the diagram and consists of a large number of cells around which are arborizations from the fibres of Goll and Burdach, sensory fibres. From these cells, fibres are given off, which pass directly to the cerebellum and it is these fibres which form the direct cerebellar tract. It is in this way that sensory impressions which are received are transmitted to the cerebellum, the great co-ordinating center of the body.

The ventral cerebellar tract is also a column containing fibres, communicating between various levels of the cord and by a system of relays, with the cerebellum of the opposite side. This brings us to the consideration of a point in regard to the conduction of sensations of pain, heat and cold. It has been demonstrated that the sensory nerve may be severed and even the sensory columns in the cord be degenerated and yet sensations of heat, cold and pain will remain. In some way not now understood these sensations arrive in the gray matter of the posterior columns and are transmitted up by an infinite system of relays through the cells of the gray matter of the cord and into the optic thalamus or funiculus cuneatus or gracilis, and thence through the usual channels to the brain. We are now in a position to trace intelligently a nerve impulse through the nervous system from the periphery to the brain and back again. This brings us to the general question of reflexes.

A reflex action is looked upon as an operation of the nervous system independent of the central nervous system. The structures necessary for a reflex act are a sensory nerve to carry an impulse to the cord or controlling center and an afferent nerve to carry the resulting co-ordinated impulse to the periphery. The diagram here shows the course of such a nervous operation. The impulse is carried from the skin, we will say, to the spinal cord, where its nerve trunk ends in an arborization around a cell in the anterior horn of the gray matter of the cord. This termination need not be the final end of this nerve, which, as we have seen, will pass on up the cord to end in the medulla, but simply a branch from it. This cell in the anterior horn is capable of co-ordinating the impulse carried to it and of initiating a new impulse which it sends out along its nerve fibre to the surface, causing muscular activity. The subject of reflexes is a broad and interesting one. The frog has been used most extensively in studying this interesting phenomenon, but lack of time necessitates our confining ourselves to a few of the more pronounced ones in man.

The brain, that is, the cerebrum, exerts an inhibitory influence upon reflex activity, the section of the cord permitting greater activity of the centers below that point. This is also illustrated in locomotor ataxia. This is a disease which causes the degeneration of the columns of Goll or Burdach, thus cutting off from the brain the impulses for that portion of the body affected by the degeneration. So long as the reflex arc which I have illustrated remains intact the reflexes will be increased on account of the elimination of the will.

There are two forms of reflexes, the

superficial or true, and the deep or false reflex. The important superficial reflexes are the planter, wherein the foot is withdrawn on tiltilation of the sole of the foot; the gluteal reflex, the contraction of the muscles of the buttocks when the skin over them is stimulated, the cremasteric reflex, which causes the contraction of the testicle when the skin on the inner side of the thigh is stimulated; the abdominal reflex, i. e., the contraction of the muscles of the abdomen as a result of stroking of the sides of the abdominal wall.

The most important reflex of the cranium is the one of which I have already spoken, the conjunctival reflex which causes a closure of the lids as a result of the slightest irritation to the surface of the eyeball. There is also the reflex of the iris with which you are acquainted, provoked by exposure to light. There is also a reflex manifested in the dilatation of the iris on stimulation of the skin of the neck.

The deep or tendon reflexes represented by the knee jerk with which you are all familiar is not a true reflex for the reason that it is largely due to local or direct stimulation of the muscle itself. The fact that this is lost in advanced ataxia is due to the fact that the condition of the muscles is such that they have lost their irritability and first refuse to respond to local stimuli. Thus while it is necessary that the reflex arc be intact to make this reflex possible, this is but a necessary accompanying condition and not a direct factor in the action.

(To be continued.)

Stories in Spectacles.

THERE is no doubt that spectacles are not dashing. They may give their wearer a learned look, but they can never make him the *beau sabreur*. We are reminded of this painful fact by a paragraph in a morning paper, which points out that there is no record in fiction of the hero having worn spectacles. We are not able to verify this statement, as our reading has not embraced the whole of fiction, but certainly, at the moment, we cannot recall any spectactled hero.

There is a big fortune waiting for the astute novelist who is first in the field with a volume in which the principal character suffers from astigmatism and takes the only sensible way of relieving it. It is estimated that a very considerable portion of the population of the United Kingdom wears glasses; and all these unfortunates would, beyond a doubt, pay their four shillings and sixpence for "The Man in Spectacles" or "Through a Pair of Glasses Darkly," or whatever the novel might be called. We can imagine the subject treated in a variety of ways.

Sir A. Conan Doyle might give us a mystery, with Sherlock Holmes, his eyesight permanently damaged by injections of cocaine, wearing spectacles in his search for clues. Anthony Hope would make his spectactled hero lean back in his chair and say good things. We commend the idea to our novelists.—*London Globe*.

Dr. Manasse, oculist and optician, is now located at 1203½ Turk St., San Francisco, Cal.

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

One Jeweler's Experience at Advertising.

(A paper read by S. M. STRAIN, at the convention of the Illinois Retail Jewellers' Association, at Springfield, July 11, 1906.)

THE old saying "competition is the life of trade" is a thing of the past, in so much as it does not cover the whole ground; the new and more modern saying that will cover the ground with the old one is, *Advertising is the life of trade*; the new adage will undoubtedly be disputed by numerous merchants, but there remains the trial to be made. It is my opinion that those who try it (not in a small way, but with liberality in the advertising appropriation) will agree in this.

In the four years that I have conducted my business I have been an ardent advertiser, I have preached and practiced advertising in the most liberal form, and results have been entirely satisfactory to me.

The time was, even within my own short memory of things, when advertising was a despised and down-trodden asset to the average business house, being used only on occasions of special sales when the merchant was overstocked with goods or needed cash; then it was that every merchant gave recognition to the good in advertising, for when publicity is needed then the advertising portion of the expense appropriation is added to. At the present time the advertising department is one of the most important in any business, it is well groomed, kept well oiled and ready for use at all times.

Advertising occupies an important place in the modern business house no matter how large or how small the house may be. The publicity department, which every successful store must have, may be considered as a silent but efficient partner in all successful up-to-date stores, drawing trade and holding the customers which it attracts.

Spasmodic advertising will bring good, profit-paying results only for a short time; it is the fellow who sits in the game all the time that will get money in return for his money expended. Take for example two clerks, one will be always found at the show case ready to serve the patrons, the other will be sitting in the back room and will come forth when his services are needed. Which one will sell the most goods? Which one will have the most friends? Which one will patrons call for when they come in? The answer is obvious, and you all well know which one

will be the most valuable to your store. So it is in advertising, the people will soon learn that the fellow who is constantly advertising is always ready and waiting for them, and will pass by the other man in the same line, to go to the wide awake store.

People have come to judge a man and his business by his advertising; for example we have in our county a number of dealers in pianos, of which I am one. But one other beside myself advertises in papers from out of his own town; his ads. are left standing year in and year out without a change; the one he now has is to the effect that he is moving to a new location and that he is expecting a car load of pianos at once; now the fact is that he moved six months ago, and has had the car load of pianos five months; there are a number of interpretations to be placed on his ad. Does he mean to say that he is so slow that it has taken him all that time to get his stock of pianos transferred to the new location, or does he imply that the stock is so large that it has taken him six months to make the move? Has he been so busy that he has not had the time? The proper interpretation is this: That he is not a successful advertiser and had just as well not use the space. It shows a lack of enterprise and to the present up-to-date class of people looks bad.

I have advertised in the same papers, and have changed the copy each two weeks, and the results show that the new methods are the ones that are taking with the people, for I am selling instruments right along in territory that at one time was indisputably my competitor's.

Advertisements should be made to sound like the advertiser talking. If you are very guarded in your language, write the ads. so, if you are given to slang, put a little of it in, but be careful as too much will not do. In this as well as other mercantile matters it is necessary to please all classes of people. And all kinds of ads. are as essential as all qualities of stock.

We are now face to face with the indisputable fact that every merchant is not a versatile and successful ad. writer. This is a drawback, but it can be overcome; for "where there is a will there is a way." Keep your eye open for good ads., look for them at all places and at all times, look for them in the daily papers, look for them in the magazines, look for them in the circulars that come to you. Some of these are

written by good writers, and are the kind that are calculated to bring results. Use them. But, you say, they will not one fit our own individual case. We will acknowledge that to be a fact and will tell you how to overcome it. There is the sacred privilege in the United States to change them if we are not satisfied, work them over, this is an easy matter if you have the knack. A Chicago jobber at one time sent out a circular headed as follows: "AFTER IT GETTING IT KEEPING IT"

Then an explanation followed as to what the IT was; my competitor picked it up and used it as follows

"After it, getting it, keeping it,
GEO. N. BLANK, Jeweler."

It soon came to be the talk of my friends that there was no meaning to it whatever and people could not understand what he was driving at. So I saw and took up the opportunity to show the real meaning of the copy. I secured the space next to his and inserted the following:

"WE'VE BEEN AFTER IT, WE'VE GOT IT, WE WILL KEEP IT."

"Do you know what IT is? We will whisper it to you. IT is the jewelry trade of the vicinity. STRAIN, Reliable Jeweler. Nekomis and Witt."

I have one here that I found last week, and have prepared it for use, in order to show the possibilities of a worked over ad. I will read it first as I found it, then will give you my own version of it.

This ad. worked over is in my perfect language, and will be taken as original. I will get the credit of the authorship of it, while in reality some one else has been the guilty party.

Original ads. are the best for many reasons, they are set out to fill the place that is vacant, they are written for the purpose of calling attention to your own business, and they assuredly do so more perfectly than those which are copied or written by others. So be original if you can.

The length of time an ad. should be allowed to run is very short, I have seldom let one pass over two weeks, no matter how good I considered it to be; they soon go dead, and a dead advertisement is indicative of a dead business.

Different views are entertained as to what is the space to use. I am a user of newspapers, circular letters, bill boards, signs, and a feature of the weekly change in show windows; I cannot say which is the best in the production of results, but

Storekeeping Department.

the use of all kinds promises the reaching of all classes of the trade, and that is the desired result.

There prevails among some jewelers the idea that the repairing is as good an ad. as they are in need of. True it is that the repairing is a very good way of gaining the public confidence, but it alone will not suffice. In these days of catalogue and department houses, when we are constantly reminded that our patrons can buy goods cheaper elsewhere, it is our duty to hold

tised in a great many different ways and have just squandered my money for the returns are not as they should be." Then that is your fault, the ads. have been wrong and people have not taken them seriously; you have been standing in your own light.

Stop and think out the trouble; perhaps your competitor is better at the advertising game than you, perhaps you have let the ads. run too long and they became stale; get down to the root of the evil and try to rectify it. Make the ads. so that people cannot help noticing them; make them interesting, readable, argumentive. Successful advertising is the life of the present day business and if you will use it properly, intelligently, telling of, and arguing truthfully for your goods and methods I can say from experience they will positively bring abundant results, and all the money

An Up-to-Date Retail Jewelry Establishment in Lansing, Mich.

TWO views of the establishment of Dodge & Whitney, Lansing, Mich., are shown herewith. The store is 40 feet deep, 19 feet wide in front and 20 feet wide in the rear. There is a partition at the end of the store, eight feet high and covered with green tapestry to harmonize with the side walls, which are of the same material. Back of this partition is a room 12 feet deep, divided in the center, making an optical room on the left side and a workshop on the right.

The establishment has a steel ceiling and a floor of mosaic tiles. The show cases, five in number, are of plate glass and solid walnut and are each 10 feet long.

All the woodwork in the store is of the

FRONT OF DODGE & WHITNEY'S STORE.

INTERIOR OF STORE OF DODGE & WHITNEY, LANSING, MICH.

spent on the silent partner of your business—advertising—will repay you many fold in increased business, profits and prestige.

Ideas and Schemes.

In the show window of the store of Taylor & Gregory, Derby, Conn., there was recently exhibited under a glass case a black snake three and a half feet long. The odd display attracted a great deal of attention.

A unique window display consists of showing a number of watches with real money—the amount for which they can be purchased being placed alongside of each watch. The display is a temptation to thieves, and hence should be carefully guarded.

Ebb N. Zell, Reading, Pa., was taken into custody about a week ago, on a charge of receiving stolen goods. Zell was arrested at the instigation of a woman who declared that her nephew stole trinkets and disposed of them through the jeweler.

same wood. The head watchmaker's bench is located at the south end of the store and close by are two 10-foot wall cases, with a three-foot beveled-edge plate glass mirror between them and a large safe at the end.

At the north end of the store there is an attractive wall case, five feet high, for the display of cut glass, etc.

On either side of this case are large panels, which are made by tacking square pieces of black cloth on the wall and covering the edges with gold beading. In these panels are erected bracket shelves, on which clocks, etc., are displayed to good advantage. Back of this there is another five-foot wall case for hand-painted china, while a similar case adorns the end of this side of the room.

The store is steam-heated and brilliantly illuminated with incandescent lights. All the wall cases, as well as the show cases, are made up with plate glass.

The show windows are enclosed with one solid piece of plate glass, with ball-bearing slide doors at the bottom.

to our trade and increase it as much as possible. Is it not a fact that our trade has suffered more from advertising done by the large houses in the cities than from any other competition? Is it not a fact then that the only effective way we have of fighting these business leeches is in the advertising of our business?

To have your trade increase, to have your sphere of influence increase, you must tell the people that you have the goods and are very anxious to exchange them for their money and then to make them believe it profitable for them you must advertise constantly, honestly and without stint.

"Well," says some one, "I have adver-

[Answers are also solicited from our readers to the questions published on this page.]

QUESTION No. 1609.—Gold Polish.—How can I make a polish that I can use on gold and plated jewelry? G. P.

ANSWER:—A good gold polish is made with rock alum (burnt and finely powdered), five parts; levigated chalk, one part. Mix and apply dry with a brush.

QUESTION No. 1610.—To Polish Ivory.—What is the best thing to use for polishing ivory? I. P.

ANSWER:—Fine pumice stone and putty powder are very good for polishing ivory. If used with a leather buff, then it is necessary to moisten the powder enough with oil to prevent them from flying away.

QUESTION No. 1611.—Substitute for Platinum.—Is there any metal that can be substituted for platinum? The cost of platinum is so expensive that I have often wondered why some cheaper substitute has not been brought out. S. F. P.

ANSWER:—Only recently a substitute for platinum was discovered by a Mr. Birmingham, Baltimore. The new metal is said to melt at about 3,636° F., to be malleable and ductile, and to be unaffected by acid. It is capable of being rolled into sheets or made into wire, and is said to become soft and workable at a temperature far below its melting point. No particulars are given as to its constitution, but it is said that the price will be about half that of platinum.

QUESTION No. 1612.—To Restore Green Copper Solution.—I use a cyanide of copper solution that has turned green. How can I restore it to a lighter color? T. R.

ANSWER:—If a cyanide of copper solution turns green, add a small amount of cyanide and it will be brought back to the natural color.

QUESTION No. 1613.—Acidless Solder Flux.—Will you kindly give us a formula for a flux for soft solder, containing no acid? We are having considerable trouble with penknives, etc., which rust after having gold sides soldered on them. R. L.

ANSWER:—A flux for soft solder which contains no acid is composed of chloride of zinc and alcohol, with sometimes an addition of a solution of salammoniac in distilled water. Any surface to be soldered with soft solder ought to have its pores opened a little; polished surfaces do not make a strong joint. Steel not to rust after soldering ought to be heated somewhat, rinsed in chemically pure alcohol and dried in hot boxwood sawdust.

QUESTION No. 1614.—Porous Holes in Soldering.—Can you give us any information as to how porous holes may be avoided on plain jewelry, such as lockets and bracelets? Whenever the articles are soldered it often happens that porous holes show up, especially where joints are. Can

you give an alloy of solder that will solder clean and will not allow porous holes to be seen? S. & W.

ANSWER:—Porous holes left by soldering may be caused by different conditions. Successful soldering requires cleanliness, skill, experience and good solder. Porous holes will appear principally owing to excessive or undissolved borax, and next from the fact that solder does not run quick enough, as protracted heat causes the solder to oxidize in part.

QUESTION No. 1615.—Ink for Polished Metal.—What kind of ink can I use for writing on polished metal? I. P. M.

ANSWER:—We know of no ink for that purpose in the market. To make an ink that is very good for polished metal surfaces, dissolve 20 parts of resin in 150 parts of alcohol and add one part of methylene blue. In a separate dish dissolve 35 parts of borax in 250 parts of water, and add to the first liquid. The ink can be used at once.

QUESTION No. 1616.—Ink for Writing on Glass.—Please give me a formula for making an ink that I can use for writing on glass. A. W. G.

ANSWER:—Dissolve in 500 grammes of water 36 grammes of sodium fluoride and seven grammes of sulphate of potash. Make another solution of 14 grammes of zinc and 65 grammes of chlorhydric acid in 500 grammes of water. When ready for use mix equal parts of the two solutions and write on the glass with a pen or pencil. In half an hour an inscription will appear.

QUESTION No. 1617.—Silver Plating Steel Knives.—Kindly give me a safe formula for silver plating steel knives and forks? S. P. S.

ANSWER:—There are several ways of silver plating knives. One way is to first lightly copper them, and the other to place the deposit directly on the steel, the latter method being the most difficult. The best success is had with this method when large quantities are plated and everything is in proper condition. When one does not silver plate very many steel goods it is best to slightly copper them first. The following is also a much used formula: Have a striking solution containing cyanide of potassium, which should stand 3° Baume. As an anode copper is used. This is intended to produce evolution of hydrogen. The second solution is cyanide and contains one-eighth to one-fourth ounce of silver to the gallon, and should stand 5° Baume. A copper and a small silver solution are used and will produce a pinkish film of silver. The next solution used is the regular silver solution, which should stand at 5° to 6° Baume and contains one-half ounce or more of silver. When the knives are chemically

clean they are placed in the first solution for about half a minute, and without rinsing put into the second for the same length of time, and finally into the third solution, where they are left until finished.

QUESTION No. 1618.—Distilling Gold.—Will you inform me if there is any way to distil gold by electricity? D. G.

ANSWER:—The American Inventor recently printed the following on distilling gold: "M. Moissan, to whom we owe so much of our knowledge of the behavior of chemical elements at a high temperature, has found that there is no difficulty in distilling gold in an electric furnace, and that the liquid condenses on a cold surface in minute crystals and threads, which we have exactly like ordinary gold in a finely divided state. The boiling point of gold is higher than that of copper or tin, but lower than that of lime, so that on distilling alloys of gold with copper or tin a fractional separation is effected, the gold being the last to pass over. When an alloy of gold and tin is distilled with lime, the distillate, consisting of a mixture of gold, oxide of tin and lime has the beautiful color and other characteristics of the well known purple Cassius used for coloring glass and porcelain. Hitherto this substance has only been produced by wet methods, such as treating a solution of gold in aqua regia with solution of the chloride of tin, and the new dry method of preparing it may be found of commercial importance."

QUESTION No. 1619.—Writing on Zinc.—Please give me a formula for making a black ink for writing on zinc. W. Z.

ANSWER:—Make a mixture of verdigris, one part; salammoniac, one part; chimney black, one-half part. Mix these well together before using and use a quill pen in writing. This ink must be handled with care as it is a poison.

QUESTION No. 1620.—Cleaning Aluminum.—How can I restore the brilliancy to tarnished articles of aluminum? C. A.

ANSWER:—Aluminum can be cleaned by immersing in water which has been acidulated with sulphuric acid. Or brush over with a soft brush, water and a little carbonate of soda.

QUESTION No. 1621.—Brush Finish on Brass.—How can I produce a brush finish on brass articles? The objects are already polished. B. F. B.

ANSWER:—The brush brass finish is produced with a brass wire scratch brush, which should revolve about 800 revolutions per minute. It is best to use a four or six row brush, from six to eight inches in diameter. While brushing, apply some moistened powdered pumice. The pieces are then treated like other brass finishing by washing, drying and lacquering.

A complete change in the method of transmitting power in operating the machines in the different departments of the Illinois Watch Co.'s factory, Springfield, Ill., was made during the vacation which was given to the employees, ending last Monday. Steam was supplanted by electricity for motive power. Thirteen electric motors were installed, of 135 horsepower each. The plant is now regarded as one of the finest equipped in the country.

General Appraisers Decide as to Duty on Fringes for Ornamenting Glass Lamp Shades.

FRINGES designed for ornamenting lamp shades, composed of glass tubes gilded or silvered for ornamental purposes, or beads strung on cotton cords and attached to cotton webbing, are dutiable at the rate of 60 per cent. ad valorem under a decision announced last week by the Board of United States General Appraisers, overruling a protest of Moller, Kokert & Co. against an assessment of duty by the collector at New York.

General Appraiser Sharretts in his opinion says:

"These protests cover certain fringes designed for ornamenting lamp shades. They are composed of glass tubes (each from 1 to 4 inches in length) and beads strung on cotton threads and attached to cotton webbing. These articles were returned for duty by the collector at 60 per cent. ad valorem under Par. 408 of the tariff act of 1897 as beaded trimmings.

"We have some doubt as to whether fringes of this character are included in the tariff enumeration of trimmings; but, inasmuch as the tubes forming some of the fringes are decorated by gilding or silvering, we overrule the claim in the protests that the merchandise is dutiable at 45 per cent. ad valorem under Par. 112, holding that it is dutiable at the rate assessed thereon by the collector, either as beaded articles under Par. 408 or under Par. 100 as articles composed in chief value of glass, gilded or silvered for ornamental or decorative purposes, the collector's decision in each case standing affirmed."

Recent Decisions as to Tariff on Porcelain Plaques, Statuary, Etc.

DECISIONS by the Board of United States General Appraisers, New York, in cases involving duties on porcelain plaques and statuary, were announced last week as follows:

PORCELAIN PAINTINGS—PLAQUES.—Protest of Charles H. Wyman & Co. against the assessment of duty by the surveyor at St. Louis. The articles in controversy were reported by the collector to consist of so-called earthenware plaques and tile pictures. They were classified under Par. 88 and Par. 95, tariff act of 1897, relating, respectively, to "tiles, * * * ornamental, handpainted," etc. and to "plaques * * * painted." The importers contended that duty should have been assessed under the provision in Par. 454, tariff act of 1897,

for "paintings in oil or water colors * * * not specially provided for."

Waite, General Appraiser: The official sample forwarded as representative of the articles in question is a slab of what appears to be porcelain, rectangular in shape, measuring about 12¾ by 8 inches, entirely covered with a hand painting representing a half-length human figure, with a foreground of masonry, drapery, etc.

MANUFACTURES OF MARBLE—STATUARY.—Protest 179665 of F. B. Vandegrift & Co. against the assessment of duty by the collector at New York. Protest overruled on the authority of G. A. 6346 (T. D. 27302) and G. A. 5462 (T. D. 24758), relating to articles composed of marble, which were held not to be statuary as defined in Par. 454, tariff act of 1897.

REAPPRAISEMENTS.

Decorated china from O. & E. Gutherz, mark 7196, Bodenbach, exported Nov. 4, 1905, to March 20, 1906, entered at New York (File Nos. 37434, 37685, 37763, 37832, 37885, 38026 and 39558); findings of Waite, G. A.: Dinner sets, 100 pieces, 1103, L1 and L2, entered at 21.50, advanced to 22.50 crowns per set; do., 1101, entered at 22.75, advanced to 25.25 crowns per set. Discount, 3 per cent. Add casks. Mayonnaise, white china, 1149, entered at 6 crowns per dozen; do., olives, 1242, entered at 2.50 crowns per dozen; do., 1243, entered at 3.75 crowns per dozen; soups, 1173, entered at 2 crowns per dozen; fern pots, 666, entered at 5.40 crowns per dozen. And similar goods. Discount, 3 per cent. Add casks. All white china advanced 5 per cent.

Japanese porcelain from M. Yomeda, Kobe, exported Jan. 19, 1906, entered at Chicago (File No. 39107); findings of Hay, G. A.: Bishu cups and saucers, 3¾ inch, 1550, entered at .75, advanced to .85 yen per dozen. Add casks and packing.

Lease of the Pearl Fisheries of Colombia.

THE lease of the Colombian pearl fisheries is now being considered by the Central Bank of Colombia, which has the power to transact matters concerning the administration and management of property belonging to the Government.

A public auction was called for the purpose of awarding the lease of the rights to fish pearls, corals, etc., on the Colombian coasts of the Atlantic and Pacific oceans. The lease is to go into effect on Aug. 1, 1906, and is to last five years in the hands of the most desirable bidder, who must transact affairs in strict conformity with the rules and requirements laid down by the Central Bank of Colombia.

Turner and Edgar Braley, Pulaski, Tenn., have purchased the business of H. H. Harris & Bro., at Columbia, in the same State. The business will be continued under the name of Braley Bros.

Greek Marble.

A REPORT from Consul George Horton at Athens indicates reviving interest in the ancient marble quarries of Greece.

Among colored Greek marbles of great beauty may be mentioned those of the Island of Skyros; the green marbles of Tinos; the Cipolino marbles of Euboea, of two shades of green that blend in broad, wavy lines that run through the stone; and the red marbles of Mani, known as *Rosso Antico*. This latter is of a blood-red color, often traversed by veins of white, or sometimes found in solid red.

A British company owns the whole of the white and blue quarries on the Penteli Mountain Range and have spent money lavishly in developing them. The private railway of the company extends 15 miles from the inclined plain of Mount Pentelicus. Blocks weighing 20 tons are taken to the company's fashioning works, whence they are conveyed to the Athens railway, a distance of about eight miles, also over a private line owned by the company. Work at the Penteli quarries is kept in full swing day and night and about 1,000 men are on the pay roll. It is the aim of the company to place marble on the market at less prohibitive prices than those which have prevailed hitherto. Blocks weighing as high as 40 tons have been taken down to the port at Piræus and loaded on ship-board for export. The Penteli marble is almost pure carbonate of lime, but there is more sparkle in the crystals than is found in Italian marble. Its close texture and high purity of color have given it an undeniable claim to its description as a "white" marble.

But of all the white marbles of the world perhaps the most beautiful is the finely grained and spotlessly pure Parian marble of the island of Paros. The celebrated statues of Venus de Milo, the Venus de Medici, the Venus Capitoline, were made of this marble. These quarries, as well as those of the adjoining island of Naxos, have been taken over by this same English company.

At the annual meeting of the S. T. Little Jewelry Co., Cumberland, Md., held June 25, the following officers were re-elected: President and manager, R. W. Little; vice-president, P. J. Seaver; treasurer, C. G. Smith; secretary, John G. Lynn, Jr. The directorate is composed of the above and Robert MacDonald, Harry E. Weber and James W. Thomas. A six per cent. dividend was declared.

THE World's Best

The man who wants to own a Kentucky thoroughbred will not be satisfied with a broncho merely because the price is lower.

There is cheap cut glass in plenty—cheap almost as the pressed product.

But Libbey perfection can only be bought under the Libbey brand—and quality considered Libbey is not only the world's best, but the world's best value.

Interesting Collection of Early American Silversmiths' Works in the Boston Museum of Fine Arts.

A MOST interesting article on the subject of a new collection of old American silver recently gathered by the Boston Museum of Fine Arts appeared in the *Evening Post*, New York, recently, in the form of a letter from R. T. H. Halsey. The facts contained therein will be of such general interest as well as so instructive to jewelers that it is herewith published in full. The letter reads:

"SIR—In the Museum of Fine Arts, Boston, there has been gathered for exhibition during the Summer and Autumn months a collection of silver, 365 separate pieces, the work of 120 of our American silversmiths of the 17th and 18th centuries. As a purely æsthetic display, the exhibition cannot fail to give pleasure to every visitor. The silver has been arranged in seven large central cases and three side cases in one of the main galleries in the museum. Its setting against white linen backgrounds is most appropriate, and the effect of the mass of silver vessels scintillating in the sunlight and here and there reflecting the colors of the Flemish tapestries, which cover the walls of the room, is most pleasing. The silver is of the period when the ancient geometrical shapes held sway among craftsmen; when purity of form and perfection of line were preferred to elaborateness of design; when dignity and weight were considered superior to quantity, and when the beautiful white metal was allowed to take its colors from its surroundings, rather than serve as a medium for excessive decoration by workers in metals.

"Nearly all of the Massachusetts silversmiths are in evidence. Hull & Sanderson (1653), Jeremiah Dummer (1660), whose two sons served the Commonwealth for many years—one Colonial agent in London, another as Lieutenant-Governor and acting Governor of the province; J. Cony (1690), John Dixwell (1700), the son of the regicide, Col. John Dixwell, who lived and died in retirement in New Haven; Andrew Tyler (1700), Edward Winslow (1702), K. Leverett (1720), the Burts, the Hurds, both father and son; Paul Revere, and numerous others are lavishly represented. New York is in evidence in pieces by Adrian Bancker (1731), Myer Myers (1786), George Ridout (1750), Richard Van Dyke (1753), Cary Dunn (1765), and Jacob Halsey (1785).

"To those interested in the development of the arts and crafts in this country the exhibition is of extraordinary interest. The collector of American coins can view there the splendid work in silver of Hull & Sanderson, who, in 1652, were empowered to coin the money of the Province of Massachusetts. Those interested in the history of paper money in America may view the handicraft of John Cony, who, in 1690, engraved the first paper money for the colony. Students of the history of American engraving—for all early engravers were silversmiths—can find much to enjoy in the beautifully engraved cartouches, inscriptions and armorial devices on numerous vessels, the work of the Hurds and Paul

Revere, and others. Collectors of American book-plates cannot fail to recognize many of the Jacobean, Chippendale, and Adams designs, which were used to adorn both silver and book-plate at this time.

"Many pieces of the 17th century church silver in Boston have been loaned for the exhibition. The collection is possibly strongest in its array of 35 tankards, and the various styles of these highly cherished and almost obsolete drinking vessels form an interesting study. The evolution of the teapot is fully illustrated, beginning with a little bell-shaped teapot of the Queen Anne period made by Bancker of New York, and carrying us down to the round, pear-shaped and oval teapots of the latter part of the 18th century. Forty porringers, with their flat openwork handles, testify to the devotion bestowed on New England children. Mugs and cans of various shapes abound. Candlesticks from the shops of Jeremiah Dummer, Leverett, and Ridout are impressive in their beauty of workmanship. A coffee pot by Revere, engraved with the Warren arms, stands out in stately prominence. Braziers by Revere and Hurd show the forerunner of the chafing dish. In the collection of spoons there can be traced the sequence of shapes and designs of this useful article of tableware.

"The art of Paul Revere, that active son of liberty, immortalized by Longfellow, is demonstrated by 40 pieces from his workshop, and his patriotism is recalled by a tiny three-legged salt cellar engraved with "The illustrious 92," made at the time (1768) when all the colonies were singing the praises of the illustrious 92 members of the Massachusetts Assembly, who, against orders from their King, had voted not to rescind a circular letter sent by them to the various Colonial Assemblies, suggesting united action against the measures of the British Ministry. More interesting still is a splendid punch bowl, also by Revere, bearing the names of the 15 original owners, all members of the Sons of Liberty in Boston, inscribed: 'To the Memory of the Glorious Ninety-two Members of the Honbl. House of Representatives of the Massachusetts Bay, who undaunted by the insolent Menaces of Villains in Power, from a strict Regard to Conscience and the Liberties of their Constituents on the 30th of June, 1768, voted Not to Rescind.'

"The other side is embellished with a crude design, in which appears the name of John Wilkes, his symbol No. 45, the Liberty Cap, and a torn parchment labeled 'General Warrants.'

"No such forcible demonstration of the artistic conception and handiwork of the 17th and 18th century silversmiths has been given before in this country. To Americans it has a deeply added interest in that it represents the craftsmanship and tastes of the forefathers by whose efforts our republic was founded.

"R. T. H. HALSEY."

The retail jewelry establishment of Ernest Karthaus' Sons, Huntsville, Ala., was looted early one morning recently, and several gold watches worth about \$300 were taken. The thief broke the plate-glass display window and was severely cut, leaving behind him a trail of blood.

NEW offices and salesrooms are now occupied by Samuel Buckley & Co., in the addition to the building at 100 William St., New York, in which they have been located, their address remaining the same. The new quarters are large and bright, giving increased facilities for the display of English novelties. There have recently been received a number of new tantulus sets in which decanters and glasses, cut in hobnail and diamond patterns, are placed in handsome cases made of various kinds of wood in metal mountings. There are bottles of a plain design in which the panels are adapted for monogram engravings. Some of the decanters and bottles have the upper or lower half cut and the other portion plain. Other glass ware includes vases blown with purple, and green ornamentation. There are rose bowls in various delicate patterns. In ribbonette designs a variety of large and small vases is seen. Another line comprises glass of an odd shade of green blown in pretty shapes. There is a collection of rare pieces of glass ware, each notable for richness in coloring or ornamentation or for pleasing effects in form. Some of these pieces are in the antique styles that are highly prized. Among the novelties in china and silver are tete-a-tete sets in which the cups and saucers are of Royal Worcester china, while the tray, sugar, cream and coffee pot is of sterling silver. A mistletoe set is of solid silver with ivory handles. The "White Mice" earthen ware includes an attractive assortment of vases and bowls, the patterns representing an owl in chase of sprightly white mice. The assortment of silver and silver plated ware is larger than in any preceding year. It includes numerous reproductions of old silver patterns. Some of the reproductions come in antique finish so that they can scarcely be distinguished from the original except by experts. There is also much to be admired in the modern silver sets. Among other novelties are small silver mounted clocks standing two or three inches high.

Among the first and most important articles imported into Guatemala from the United States are those made of glassware. The exports of New York to Guatemala, which average about \$75,000 per month, include watches and jewelry.

THE RAMBLER.

The year of 1905 showed no marked advance in the gold mining industry of Venezuela. Before extending their operations many capitalists and mine owners are awaiting legislation which will grant the industry lighter taxation than heretofore.

Watch Case Satisfaction

THE MOST POPULAR CASES on the market, no doubt, are the 25-year lines. They fall within the class of "high grade" cases, which satisfy self-respecting men. Twenty-five years seems a reasonable time.

The Wadsworth "Pilot" (25-year) Watch Case *"A Quarter of a Century"*

WE INVITE COMPARISON between this line and other makes of 25-year cases—compare Shapes, Decorations, General Appearance, Prices, etc. Then use your own judgment and buy on business principles—on merit without prejudice.

INVITATION.

WE desire to say that in three weeks our exhibition of magnificent Jewels will be open to the Jewelers of this country. We extend a most cordial invitation to anybody that contemplates a visit to this city between August 13th and 18th, inclusive, to call and view this remarkable display.

We are at your service with information as to transportation and any reservation of rooms that you desire to make in this city.

The impressiveness and grandeur of this display will no doubt create such a feeling in your mind that you will regard our future exhibitions as one of your annual anticipations of pleasure and instructiveness.

One thing we can feel very positive about, and that is, after viewing this exhibition you will find it most important to view all our others.

Once a visit always a visit.

Makers of Diamond Mounted Jewelry THAT SELLS.

258-260 Fifth Avenue,
NEW YORK.

We are always pleased to ship goods on memorandum when satisfactory references are given.

In 1847, or about sixty years ago, the three Rogers brothers, Asa, William and Simeon, discovered the process and began the electro-plating of spoons, forks, &c., in Hartford, Conn.

Fifty-five years ago, the Meriden Britannia Co. was formed by Horace C. and Dennis C. Wilcox, I. C. Lewis, W. W. Lyman, Lemuel J. Curtis, John Munson and James Frary at Meriden, Conn.

Forty-five years ago, the "Rogers Bros." business was moved to Meriden, merged with that of the Meriden Britannia Co. and goods made under the supervision of Rogers Bros. Imitations having appeared, "1847" was then made a part of the trade-mark to identify the genuine.

Up to ten years ago, no trade-mark used on silver plated ware (other than that used by this company) had a date as any part of it.

Forty years ago, general advertising in daily papers and weeklies was commenced by the Meriden Britannia Co.

Thirty years ago, this company introduced sample boards on which were arranged spoon blanks in various stages, from the sheet metal to the finished article, showing "the evolution of a spoon."

Twenty years ago, a more general advertising campaign was inaugurated, and such publications as Youth's Companion and other household periodicals began to be systematically used.

Thirteen years ago, was originated the phrase "Silver Plate that Wears," referring to "1847 Rogers Bros." flat-ware and Meriden Britannia Co. hollow-ware. **This phrase has not apparently been improved by the many attempts of others.**

Ten years ago, assistance in the shape of electrotypes of complete advertisements was furnished the trade handling "1847 Rogers Bros." goods, and the importance of pushing a well-advertised line was demonstrated. Specimens of advertisements being used in general mediums were sent to the trade.

Seven years ago, the "drag test" was shown in a **copyrighted** booklet issued by the Holmes & Edwards Silver Co., **and a picture of the machine, and illustrations showing the results of the test, have been in continual use in their literature since that time.**

Most of these original ideas and plans introduced by us regarding trade-marks, publicity, selling, etc., are now being used by makers of brands unknown five or ten years ago, simply confirming one of the best known and most widely quoted of the apothegms written by Caleb C. Colton in "The Lacon" during the early part of the Nineteenth Century.

The New 4 IN ONE ASH-RECEIVER FOR SMOKERS

This cut represents the Four-in-one Ash-receiver with parts separated. When the parts are nested, one complete ash-receiver is formed. It is especially adapted for a party of gentlemen who require more than one ash-receiver. Made in Brass, Nickel-plate, Copper and Silver-plate. Our catalogue of Smoking Articles sent on request.

Diamond Mining in Brazil.

United States Consul Reports on Alleged Frauds Perpetrated on American Public.

WASHINGTON, D. C., July 14.—Consul George E. Anderson, of Rio de Janeiro, reports that it is a little dangerous to generalize too much on conditions surrounding diamond mining in Brazil, but the activity of a number of promoters of such enterprises now in the United States, and the consequent increase in the number of inquiries received at that consulate-general, renders it necessary to lay down some general limits to the prospects of the industry. Mr. Anderson continues:

In offering general discouragement as to mining propositions, I wish to be understood as not reflecting upon all the enterprises now on foot to develop Brazilian mining properties. It is possible, and even probable, that some of them will result profitably, and the reports of mining experts on the country in general are such as to indicate that the country will probably some day produce great returns on mining investments. At the same time the country is full of schemes, which are either out and out frauds or which are based upon claims and facts so slight as to make them little less than frauds.

The United States and Great Britain, especially New York, Chicago and London, are the chief fields of operations for a number of promoters who have never done any mining but what they have done in these cities, and there are a number of so-called mining companies now soliciting stock subscriptions in the United States whose officers are not even certain where their property, or land they claim as property, lies. The president of a diamond mining company, having its offices in New York, wrote me a letter within the past week to ask how near a city of Brazil, near which his company claims property, was to a railroad. And yet this company is probably selling stock upon statements which give a most glowing account of the country in general, the special claims of this property in richness and accessibility, and other representations which are in no way true. On the other hand, there are several reputable companies in the field, the representatives of some of whom are in touch with this consulate-general, who are working claims in good faith and which may succeed. It is a notable fact, however—a fact which is certified to me by men who have had long experience in matters relating to the Brazilian mining fields, that not a single mining company operating in what is known as the gold and diamond fields of Brazil has paid a dividend. There may be exceptions to this rule, but as yet I have been unable to locate them.

INACCESSIBILITY OF MINING REGIONS.

Assuming that a mining enterprise having property or claiming to have property in Brazil is pushed in the United States or elsewhere in good faith, there are several elements to be considered in addition to those which may be said to exist in all mining enterprises. Chief among these, perhaps, may be cited the special difficulties attending operations in a tropical, mountainous country where there is no railway

communication with the mining country for distances representing from 5 to 50 days' journey on mule back. The reports of mining experts indicate that there are diamonds and there is gold to be found in a large territory in Brazil. The diamonds, however, are not found as they are in South Africa in certain large pockets or pipes, the structure and working of which is so well understood. In Brazil the diamonds are found in small pockets covering perhaps many thousand square miles of territory. Little of this territory has been worked with modern machinery, but enough of it has been worked with modern machinery to establish certain facts.

The first of these facts is that it is impossible to count upon the value of a property by preliminary surveys or guesses by engineers. The second is that practical mining operations in the Brazilian field must be done with machinery which can not only be readily transported in parts or otherwise on mule back to the first point of operations, but which can later be changed about readily in rough country, in unfavorable rainy seasons, in a country without roads, bridges, supplies or anything else in the way of conveniences of civilization. It is evident that when one of these small pockets are worked out it must be practicable to move the plant elsewhere at a minimum cost to try fortune in a new pocket. It is evident also that this involves large expenditures, and large capital is required to work such properties. Assuming that a company is formed in good faith, that it owns the property in the diamond country it claims it owns, and that it is managed not only by honest men but by men who know their business, it is evident that many thousands of dollars must be expended before the owners of the property know whether they really have anything or not.

UNCERTAIN LAND TITLES.

Another great trouble in these enterprises is in the fact that there is constant litigation over the matter of titles to land in this country. Brazilian mining laws are very incomplete and unsatisfactory. Immense quantities of land can be had in the mining country for very little money; but generally it so happens, as soon as anything valuable is discovered or developed upon the land taken, that some one else has a prior claim to it, and the company or individual whose energy has developed this value either is robbed of the fruits of energy and expenditure of capital or is compelled to fight for them at an additional expenditure of both. One of the most reliable American concerns now working up country has been compelled to cease work within the past month under an order from a Brazilian court. This company leased certain mining country from a company which claimed to own it and which was able to establish a good prima facie title. It went to work, established its machinery, and was fairly successful in work. It now appears that the company from which it leased its property bought the property from certain parties for a certain sum of money and certain stock; that this stock is in a company which has not been properly registered, and is therefore worthless under Brazilian law, and that therefore the

original owners now want the property, which has been shown to be more valuable than it was when first sold. In the meanwhile the American concern has idle men on its hands, costly machinery idle, and its sole efforts are being devoted to securing what it thought it already possessed.

POINTS TO BE GUARDED.

I think it fair to say, generally, that there should be no investments in mining enterprises in Brazil which do not provide—

First, a large amount of actual cash for capital for prospecting the proposed country. General assurances, even from mining engineers of repute, under Brazilian conditions are good only for a speculation or a gamble as to whether paying property can be struck. There are no "snaps" to be handled with small capital.

Second, a careful investigation, not only of the country to be worked, but of the title to any and all property to be acquired. A requirement of this sort ought to be unnecessary with sensible business men, but the present situation in mining affairs in Brazil demonstrates that there is special need of a warning on this point.

In all this there is especial need of an investigation of the good faith of the mining proposition under consideration. It is a lamentable fact that a large proportion of Brazilian mining enterprises are frauds, and that there are men now in the United States with enterprises which represent nothing more than the money they can get from the American public.

Wm. B. Durgin Co. Purchases Business of Goodnow & Co., Boston, Mass.

Boston, Mass., July 20.—It has just been authoritatively announced that the business of Goodnow & Co., silversmiths, 38 Stanhope St., has been purchased by the William B. Durgin Co., Concord, N. H., and that probably the factory will be removed from Boston to the Durgin plant at Concord.

In this connection it will be recalled that the firm of Goodnow & Co. succeeded Goodnow & Jenks, and that Mr. Jenks, of the latter firm, is now the president of the Wm. B. Durgin Co., so that the purchase of this business will place Mr. Jenks in a position to renew his old connection with this line.

The business just bought by the William B. Durgin Co. was established in 1893 by Walter R. Goodnow and Barton B. Jenks, Mr. Goodnow having previously been a member of the firm of Bigelow-Kennard & Co., while Mr. Jenks was an experienced silversmith. The firm continued without change until the dissolution caused by Mr. Jenks becoming the president of the Durgin concern. Since that time Mr. Goodnow has continued the business alone.

As Louis O. Stevens, Macon, Ga., was crossing the railroad tracks of the Central Railroad of Georgia, something happened to the machine and the vehicle stopped with the rear wheels between the rails on which a freight train was approaching. In order to save his life, Mr. Stevens was obliged to jump from his automobile, which was a few moments later struck and wrecked by the train.

STRAIGHT TALK

We want to do business with every wide-awake retail jeweler of good standing in the United States.

We know that our various lines of gold jewelry are unquestioned as to quality, price and construction.

Therefore we do not hesitate to stamp our registered Trade-Mark on every piece as a guarantee of the above facts.

We make rings for man, woman and child. All kinds of 14k gold sleeve buttons, lockets, Larter shirt studs and Larter vest buttons.

If our travelers do not reach you, may we send you the Fall edition of the Larter Gold Book now in process of publication? A postal will bring one.

A Notable Gold Racing Trophy of the Early Part of the Last Century.

A RACING cup that dates back to the early days of the turf in the United States is now on exhibition at the Gorham Co.'s store, Fifth Ave. and 37th St., New York. This is said to be the only gold racing cup in existence, commemorating the glories of horse racing in South Carolina in the early part of the last century. It was awarded, as indicated by the inscription, at the "Charleston, South Carolina, races, Feb., 1820," to Colonel Richard Singleton, whose racer, "Kosiesko," defeated "Mark Anthony," a horse belonging to a Mr. Richardson. Since then the cup has remained continuously in the Singleton family. From Colonel Singleton it descended as an heirloom to his daughter, Angelica Singleton, who became the bride of Major Van Buren, a son of President Martin Van Buren. She was one of the noted brides of the White House, and later, upon the death of the President's wife, became the mistress of the mansion. From Mrs. Angelica Singleton Van Buren, the cup passed to General James W. Singleton, and from him to the present owner, James J. Singleton.

Several weeks ago, Riley Bros., Buckhannon, W. Va., were instrumental in getting the owner's permission to have the cup publicly exhibited, and it was for some time shown at their store, whence it was brought to New York.

The cup bears the names of the makers, Rundell, Bridge & Rundell, "auriferes to the Prince and Princess of Wales, London, England." The hall mark shows the cup's quality and indicates that it was fashioned in 1812 and finished in 1819.

The cup is of simple construction with handles and a cover. On one side is represented a racing scene in which three horses and riders are contesting. On the other side is the inscription.

Death of Benjamin F. Watts.

ANN ARBOR, Mich., July 18.—Benjamin F. Watts, ex-city treasurer and former coroner, who died of apoplexy Friday last, was well known in the jewelry trade, having followed his craft for over half a century. The funeral, which was held Sunday, was largely attended, and was under the auspices of the Masonic fraternity, in which Mr. Watts had long been prominent.

Mr. Watts was for many years manager of the jewelry store of his brother, J. C. Watts, and succeeded the latter as proprietor to the business in 1882; four years later he sold out to J. C. Watts & Co., and from that time he devoted his almost entire attention to repair work, in which he was noted for his skill and ability. Outside of his work in the jewelry trade his principal interests were in Masonic work, and in this fraternity he had risen very high, having been elevated to the office of Grand High Priest, of the Grand Chapter of Michigan, in 1882.

He is survived by a widow and a son, W. W. Watts, of Detroit.

J. M. Davis, Waynesville, N. C., has just completed extensive improvements in the exterior of his store.

Dr. George F. Kunz's Report.

Production of Precious Stones in 1905
Published by the United States
Geological Survey.

[The publication of this Report was commenced in THE JEWELERS' CIRCULAR-WEEKLY, July 18, 1906, and will be continued in this and succeeding issues until completed.]

NEW YORK.

Diamonds in Drift.—In the article of Prof. William H. Hobbs, on "The Diamond Field of the Great Lakes," published in 1899,¹ emphasis was laid on the desirability of careful search for diamond occurrences on the moraine line east of Ohio—in Pennsylvania and New York—as a further guide to locating the original northern starting point. No similar discoveries have since been made, except those in central Indiana, until recently a report has appeared of one or perhaps two diamonds being found near Syracuse, N. Y. An account of these and a discussion of the bearings of the whole subject were given by Philip F. Schneider, of that city, in the *Syracuse Herald*² of Dec. 24, 1905. The topic had been presented previously, by Mr. Schneider and others, at the October meeting of the Onondaga Academy of Sciences. Unfortunately the facts are not capable of positive proof at the present time. The owner of the gravel-pit in the southern part of Syracuse claims to have found a diamond therein several years ago and to have subsequently sold it for \$1,700 to a person living at Springfield, Mass. The purchaser has since died and his relatives are in Europe, so that it is not possible at present to verify the account. The same owner also reports finding another smaller diamond, which he still retains; but Mr. Schneider questions its reality, and suspects it to be only a quartz crystal.

The geological interest of such an occurrence and its inherent probability in connection with the western diamonds of the drift make these unverified reports worth recording.

In Mr. Schneider's article he also treats of the possible relation of these diamonds, if such should prove to be, with the peridotite dikes in and around Syracuse. It will be remembered that this rock, altered to serpentine, was identified by the late Prof. H. Carvill Lewis with the rock at Kimberley, South Africa, and with that in Elliott County, Ky., all three being included under his name of kimberlite.

This close relationship to the South African diamond-bearing rock has led to speculation and may lead to possible diamond production at the Kentucky and the Syracuse localities, especially as both these latter have yielded pyrope garnets similar to those freely obtained at Kimberley, and there known as "Cape rubies." No diamonds, however, have been definitely found as yet at either of the American kimberlite occurrences; but if any should really be obtained near Syracuse, the question may be raised whether they are derived from the drift or from the kimberlite dikes of the vicinity.

CANADA.

Search for Diamonds.—Dr. H. M. Ami, of the geological survey of Canada, has given careful instruction to 100 or more parties that are surveying for the Transcontinental Railroad, immediately north of the Great Lake region, how to look for the diamonds in the hope of their locating the source of the diamonds which have been found in the glacial deposits of Wisconsin, Michigan, Ohio and Indiana.

SOUTH AFRICA.

De Beers Consolidated Mines.—The most prominent feature in the 17th annual report of the De Beers Consolidated mines, for the year ending June 30, 1905, laid before the meeting of the shareholders at Kimberley, in November, is doubtless the retirement of Gardner F. Williams from the office of general manager, which position he has held and administered with signal ability and success for the last 19 years. He has for some time desired to be relieved from the cares of his position, and he will now be succeeded by his son, Alpheus F. Williams, who has been assistant manager for several years, is thoroughly familiar with the situation, and has ably conducted the working of this great mine in the several absences of his father in the United States.

¹Jour. Geol., Vol. 7, No. 4, May-June, 1899.

²Syracuse Herald, Dec. 24, 1905.

In regard to the output of the year, it presents no very marked differences from that of the year 1904. There is some advance in total production, due to the increasing yield of the two newer mines, the Bultfontein and the Dutoitspan; but the old mines show a continued falling off. On the other hand, the Bultfontein and Dutoitspan have developed a sudden advance in richness, the yield per load of these two mines taken together being some 40 per cent. above that of the year before. The other mine, previously known both as the Premier and the Wesselton, remains about the same in rate of production. This mine is spoken of in the present report only as the Wesselton, the name Premier being apparently discarded, and wisely so, in view of the prominence assumed by the great Premier mine near Pretoria in the Transvaal.

The combined data for the De Beers and Kimberley mines are as follows:

PRODUCTION OF DE BEERS AND KIMBERLEY MINES IN 1904 AND 1905.

	1904.	1905.
Loads of blue hoisted.....	2,440,895	2,447,850
Loads of blue washed.....	2,401,099	2,418,158
Carats of diamonds found ¹ ..	1,303,525	1,108,980
Value of diamonds found ¹ ..	£3,102,798	£2,929,589
Number of carats per load.....	0.54	0.46
Value per carat ¹	48s. 11d.	52s. 10d.
Value per load ¹	26s. 7d.	24s. 3d.
Cost of production per load ¹ ..	7s. 4d.	7s. 8d.
Loads remaining on floors...	2,175,079	2,204,771

It will be seen from these figures that the continued rise in value has again failed to counteract the decrease in richness, as shown by the diminished value per load. The quantity of blue ground reported as in sight in 1904 in these two mines was 9,987,908 loads; in 1905 it was 8,026,400 loads—a decrease of about one-fifth.

Of the three newer mines the Wesselton furnished the maximum quantity of blue ground, 2,068,278 loads; and it yielded also one diamond of 187½ carats, the largest yet found in this mine. The Bultfontein leaped from a yield of 0.29 carat per load in 1904 to an average of 0.41 in 1905. This yield rose further during the latter half of the year, and a test from the east end of the mine area gave, in 32,122 loads, an average as high as 0.523 carat. The Dutoitspan mine more than doubled its former average yield, having risen from 0.12 to 0.26 carat per load. In quality the diamonds from this mine are far above those from any other. All three are still worked more or less as open mines.

The data for these mines for the last two years are as follows:

PRODUCTION OF THE WESSELTON, BULTFONTEIN AND DUTOITSPAN MINES IN 1904 AND 1905.

	Wesselton.		Bultfontein.		Dutoitspan.	
	1904.	1905.	1904.	1905.	1904.	1905.
Loads hoisted.....	1,919,304	2,068,278	429,729	605,730	39,914	311,499
Loads washed.....	2,134,903	2,032,582	514,385	611,491	24,359	65,784
Diamonds found (carats) ¹ ..	605,241	578,152	148,219	249,002	3,032	17,121
Value of same ¹	£1,055,269	£1,067,475	£219,711	£434,902	£6,457	£59,847
Carats per load.....	0.28	0.284	0.29	0.41	0.12	0.26
Value per carat ¹	34s. 10d.	36s. 11d.	29s. 7d.	34s. 11d.	(?)	69s. 11d.
Value per load ¹	9s. 10d.	10s. 6d.	8s. 6d.	14s. 2d.	(?)	18s. 2d.
Cost per load ¹	3s. 7d.	3s. 10d.	5s. 9d.	5s. 10d.	(?)	12s. 3d.
Loads on floors.....	1,356,260	1,391,956	397,503	391,742	15,555	261,270

¹Fractions of pounds, carats and pence omitted or approximated. ²Data not given.

The quantity of blue ground in sight at these mines was estimated as amounting to 51,300,300 loads. This amount being added to that given above for the De Beers and Kimberley—8,026,400—the entire total foots up 59,326,700 loads. Beyond this, however, there are of course the unexplored resources of the three newer mines which have only been opened to depths from one-fourth to one-third those of the older mines.

The recovery of diamonds from tailings and debris has continued, though on a scale somewhat less than in the previous year, which was the maximum. In 1905 1,616,030 loads were washed, mostly from the De Beers mine, and there were obtained 257,059 carats of stones, valued at £311,030.

Even with the higher rate realized for rough diamonds, the earnings of the De Beers Co. were 15 per cent. less than in 1903, as the average yield of rough diamonds from the De Beers and Kimberley mines has fallen from 0.76 carat per load in 1902 to 0.61 carat per load in 1903 and to 0.46 carat per load in 1905. Great quantities of the poorer diamond earth were treated. The total sum re-

alized from the sale of diamonds was £4,802,844; the expenditures were £2,937,509; the profits were £1,865,335. Out of the profits £1,800,000 were paid in dividends, the dividends being 20s. per preferred share as against 27s. 6d. in 1903 and 1904. The reserve was \$846,783. The entire sales in 1905 were made "rough" by the syndicate, and this is to continue in 1906, on account of the lower yield and on account of the great demand. This is in spite of the fact that the price of rough stones was raised twice, five per cent. each time, during the year 1905; but the diamond syndicate makes these advances because there are less diamonds found to-day than there were found 15 years ago, while the demand for them has greatly increased.

Premier (Transvaal) Mine.—The increased output of the Premier (Transvaal) mine has caused great interest in the production of diamonds and the finding of the largest known diamond, the Premier or Cullinan, weighing 3,024 carats, and of several other large stones, one of which weighed over 600 carats and another 340 carats, has given this mine the greatest record for producing material of exceptional size.

Orange River Colony Mines.—The extensive development of diamond mining in the Orange River Colony is well shown in the Annual Report of the Mines Department of that Colony for the year ending June 30, 1905. This report, by Burnet Adams, acting chief inspector of mines, tells of steady increase in the diamond output of the colony and describes the condition of the producing mines, besides the Vaal River alluvial diggings, and of more than 50 prospects and partially developed undertakings. In regard to these latter, many have proved disappointing, but some have yielded good diamonds and may prove to be valuable properties.

The seven mines that have actually yielded more or less successfully are (1) the New Jagersfontein (the old celebrated mine reorganized under the new government); (2) the Koffyfontein; (3) the Ebenhaezer; (4) the Lace Diamond Co.; (5) the Monastery; (6) the Kaalvallei; (7) the New Driekopjes. Of these, the last is now closed and for sale, and two or three of the others are partially suspended and either engaged in testing or in awaiting improved appliances. The Jagersfontein is much the most important and has been steadily advancing, both in equipment and in production. Heretofore it has been carried on as an open working, but steps are now being taken to change to the underground system, as was done with such success in the De Beers and Kimberley mines.

The diamond output of the colony for the year

covered by the report is given in a tabular form by months, from July, 1904, to June, 1905, inclusive. These show some variations, but maintain a fairly uniform average. The product is given as a whole, without distinguishing the mines, but the Jagersfontein far exceeds all the rest together.

OUTPUT OF DIAMONDS IN ORANGE RIVER COLONY, FISCAL YEAR ENDING JUNE 30, 1905.

Loads washed.....	3,556,000
Carats of diamonds found.....	320,548½
Value of same.....	£938,617, 15s. 6d.
Carats per load.....	0.0899
Value per carat.....	58s. 8d.
Value per load.....	5s. 3d.

Subsequent data for the month of July, 1905, show but slight differences from the average of the month preceding. The cost of mining per load is not given in the report.

(To be continued.)

J. E. Eckert, Marengo, Ia., has bought F. B. Downard's stock of jewelry, and will consolidate it with his own.

¹Fractions omitted or approximated.

OLD RELIABLE W. & S. B. ★

We extend our greetings to the members of the American Retail Jewelers' Association and the American Association of Opticians, as they assemble in convention.

In view of some matters that are to be considered at both conventions, we offer the following suggestions:

Don't waste valuable time reflecting on the inroads made in your business by Department Stores and Retail Mail Order Houses. Buy the Old Reliable line and avoid this kind of competition. Our Old Reliable W. & S. B. ★ 1-10 and Globe Filled W. & S. B. ★ 1-8 chains are not sold to either Department Stores or Retail Mail Order Houses.

Bunch your buying. If you buy a little here and a little there you gain the regard of no one and your account has no value. Concentrate your purchases on the Old Reliable line and participate in the opportunities offered by our premium plan.

We invite your inspection of Old Reliable goods at our booth in the exhibition hall. We shall have some special things to show you and a very interesting booklet for you to read.

London Letter.

LONDON, July 12. I recently referred to the inaugural meeting of the British Watch and Clock Makers' Guild, and incidentally to the fact that the National Association of Goldsmiths was not represented thereat. At the annual convention and reunion of the association which was recently held at Glasgow the question came up as to the position of the N. A. G. with regard to the newly formed Guild, and while the retiring president and the organizing secretary stated that they had no objection to the new society, it was quite evident from the remarks passed by both that they felt a bitter antagonism. As a result, a very long discussion took place, and in the end, and only after very hard pressing, the executive agreed to meet representatives of the Watchmakers' Guild.

*

The convention was, viewed from the business standpoint, a dead failure. A number of items were placed upon the agenda with no other object, apparently, than that of creating trouble and friction. One most important matter, that of the hall-marking of foreign watches, was simply referred to in the report, and Mr. Steward, the editor of the *Watchmaker*, endeavored to draw the sub-committee on the subject. At last year's convention the National Association of Goldsmiths passed a unanimous resolution to the effect that they were in entire agreement with the decision of Justice Channell, viz., that watch cases containing movements, coming into Great Britain, were not plate within the meaning of the act, and were, therefore, not within the law which compels all plate, British or foreign, to be sent to the British assay offices to be marked. From facts which had come to the knowledge of Mr. Steward it would appear that the sub-committee had overriden the unanimous decision of the annual congress, and had informed the Worshipful Company of Goldsmiths that they disagreed with Justice Channell's decision, and yet they refused to inform the annual congress at Glasgow what steps they were taking, after having had a clear mandate to uphold, in every way, the judicial decision of Justice Channell.

The National Association of Goldsmiths has undoubtedly done a considerable amount of good work, but it has been a one-man business and many of the members are beginning to "kick over the traces." Certainly his autocratic actions have brought him into trouble with several members of his executive committee, while his attempt to run his own nominees for the vacant executive places being frustrated by the nomination of two Scotch members, and their being elected at the top of the poll, shows him that he cannot hold the same respect which for so long had been accorded the honorable organizing secretary; and as I write I learn that Thomas Field, the organizing secretary, is declaring that he will not be dictated to and, consequently, is resigning his position, but as he has threatened this for a number of years past, few take him seriously.

However, the position is a very acute one, and, viewed from a democratic standpoint, a very serious one; for it is obvious that an association which is "bossed" by one indi-

vidual cannot last very long, and with the dissatisfaction expressed on every side unless something of a radical nature takes place the National Association of Goldsmiths will come to an end.

*

There is being produced at Barkentien & Krall's, Regent St., W., a very handsome altar which is destined for one of the big churches in Philadelphia. It is being made to the order of Mr. Wanamaker. It is just seven feet long by three feet two inches deep, and has for its central feature a finely modeled figure of the Madonna and Child. This is flanked on either side by four columns which consist of six series of smaller columns or pillars, all different, each of which is filled with a Biblical figure, making in all 144 separate figures, each bearing a name. The pillars are all hand made. Between the columns are 12 modeled panels representing Biblical parables and subjects, as, for instance, the Annunciation, the Turning of Water into Wine, etc. In the capitals of the columns are angels kneeling in various positions, each holding a different musical instrument. The eight columns are bifurcated by a band which runs round, and is set with a variety of precious stones, each one being in a gold setting. The whole is of silver, weighing about 4,000 ounces, and is surmounted by a fine marble slab. It may be asked how it comes about that a British firm should be producing this work, while in America you have such prominent firms as Gorham and Tiffany, let alone others of high standing, although perhaps not so world famous. Anyway, the firm which is producing this piece of work, while not well known, employs some of the finest London workmen.

There is one point with regard to this which is being queried, and that is as to whether it will pass the United States Custom House without having to pay a duty. It is a question of art or commerce.

*

Trade here is by no means good, and while our Board of Trade returns are going up, there appears little opportunity for doing much—at any rate, in the jewelry and allied lines.

*

The British Optical Association some time since applied for the grant of a royal charter, which is only granted by the Privy Council with the consent of His Majesty. The British Medical Council objected to the granting of a charter, and I understand that the Society of Chemist-Opticians also raised objections. Anyway, the British Optical Association will not get its charter, the Privy Council refusing to recommend the King to grant the same.

The Sight-Testing Bill before Parliament is in no better position than when I last wrote, and the attempt to get the British Optical Association to fall into line with the General Board of Opticians has so far not borne any good fruit.

ST. GEORGE.

When Otto Scheidt, Joliet, Ill., arrived at his store a few mornings ago, he found traces of a circle cut in each of the two front plate glass windows. Whoever did the cutting, was evidently frightened away before he had time to remove the glass.

Clocks, Watches, Jewelry, Etc., Shipped to Alaska, Porto Rico, Hawaii and the Philippines.

WASHINGTON, D. C., July 19.—The following figures show the commerce of the United States, with its non-contiguous territories, for comparative periods of time, in jewelry, clocks, watches, etc.

ALASKA.—Clocks to the value of \$4,768 were shipped to Alaska during the 11 months ending May, 1906, as against a value of \$4,457 for the same period of 1905. The watch shipments increased from \$767 during the 11 months of 1905 to \$1,431 during the same period this year. Jewelry shipments amounted to \$10,710 in May, 1905, declining to \$3,667 in May this year. During the 11 months' period, however, the shipments increased from \$36,309 in 1905 to \$58,661 this year. Plated ware shipments amounted to \$5,728 in 1905, and \$7,370 in 1906.

HAWAII.—During May, 1905, clocks to the value of \$1,199 were shipped to Hawaii, increasing to \$1,509 in May of this year. During the 11 months' period the shipments increased from \$8,633 in 1905 to \$11,686 this year. No watches were shipped to Hawaii either in May a year ago or in May last. The value for the 11 months of 1905 was \$1,785, increasing to \$2,196 during the same period of 1906. A remarkable decline is noted in the shipments of jewelry in May a year ago and in May last, the figures being \$21,650 and \$1,350, respectively. During the 11 months' periods the shipments fell from \$166,034 in 1905 to \$83,421 in 1906, while plated ware shipments fell from \$51,917 to \$24,859 during the same periods.

PORTO RICO.—During May, 1905, clocks to the value of \$590 were shipped to Porto Rico, increasing to \$740 in May last, while during the 11 months' periods the shipments likewise increased from \$2,872 to \$5,353. During these same periods watch shipments increased from \$63 to \$185, and from \$2,222 to \$3,485. Jewelry shipments likewise show a healthy growth, the value for May, 1905, being \$295, increasing to \$1,136 in May last, while the values for the 11 months' periods were \$7,991 in 1905 and \$14,298 in 1906. Shipments of plated ware increased from \$6,022 to \$8,294 during the 11 months' periods.

PHILIPPINE ISLANDS.—Clock shipments to the Philippines amounted in value to \$2,050 during May, 1905, decreasing to \$1,432 in May last, while during the 11 months of 1905 the shipments were valued at \$4,453, increasing to \$4,837 this year. On the other hand, there were no watches shipped to the Philippines in May last, as against \$25 worth in May a year ago. The shipments for the 11 months' periods decreased from \$1,759 in 1905 to \$924 this year. Jewelry shipments increased from \$760 in May, 1905, to \$1,759 in May last, and from \$2,317 to \$3,905 during the 11 months' periods. Plated ware shipments increased from \$1,624 to \$4,926 during the last-mentioned periods.

H. Bealmear, Baltimore, Md., has leased the building at 25 W. Baltimore St., now occupied as a ticket office by the Western Maryland Railroad Co., and will conduct a jewelry store.

Robbery Clearly Planned.

Four Thieves Steal Diamonds Worth \$2,500 from Store of Edward Wineburgh & Sons, Utica, N. Y.

UTICA, N. Y., July 18.—One of the boldest daylight robberies which has taken place in Central New York for some time was reported to the local police yesterday by Joseph Wineburgh & Sons, 32 Genesee St., who said that four crooks, evidently expert show case thieves, got away with a tray containing 24 solitaire rings worth \$2,500. Two men charged with being the thieves have been apprehended, but the man who carried off the diamonds has escaped. The boldness of the daylight raid staggered the clerks in the Wineburgh store, but they immediately got in com-

blue serge sack suit, a soft black hat, and displayed a conspicuous scarfpin of diamonds and emeralds.

No. 2—Man about 35 years old and giving his name as Albert Young, also under arrest. He is about 5½ feet high, face sunburned and sharp-featured, and has a slight impediment in his speech.

No. 3—Man about 30 years old, 5 feet 10 inches, slim build, smooth face, and the operator who stole the diamond tray. He wore a dark brown slouch hat, a dark gray suit and a straw hat.

No. 4—Man about 25 years old, who stood on guard outside the store; rather stout and wore a dark-blue suit and stiff straw hat.

All the men had the appearance of having lived an outdoor life. Their faces were

o'clock and went to the rear part to get a box. He was compelled to go into the cellar for one. This was a part of the plan, as the thieves got Mr. Price out of the way.

The scar-faced man picked out a clock simultaneously, and Mr. Wineburgh went to the rear to pack it up. This gave thief No. 3 the opportunity, and it is believed while Mr. Wineburgh and Mr. Price were in the rear that he slipped around the diamond case, opened the door and removed the diamond tray, placing it under the folds of his sack coat. Charles H. Livingstone, Mr. Wineburgh's brother-in-law, was in the rear part of the store reading a paper, but he could not see the third thief. The young chap—thief No. 4—was guarding the door.

While the theft was in progress the boy Dunn returned from dinner, but the outside worker, No. 4, detained him in conversation for a few minutes, until the first two thieves had gotten their clocks and the trio had started for the door and the street. Soon after entering the store, young Dunn noticed the open show case, and the discovery was made.

The local police were at once notified, descriptions of the men had, and the depots and hotels all watched. It was learned that the men had been stopping at the Lewis House, in Bagg's Sq., near the Wineburgh store. Chief Cleveland sent descriptions to neighboring places and the larger cities.

About 2.30 o'clock Bliss and Young registered at Stanwix Hall, in Rome, secured a room and changed their clothing. Then they left. They were seen on the principal streets, and later it was ascertained that they had left the city, walking in a westerly direction. The police got on their track, and about an hour later they were arrested near Greenway, a small station west of Rome.

Thief No. 3, the man who sneaked the tray, it was learned, reached Rome on the same trolley car with Young and Bliss. He was seen later in Uvanni's saloon, but when he saw an officer coming he went out through a rear door and escaped.

The young man who stood guard at Wineburgh & Sons' door got away without being detected, and it is believed he left the other three in this city.

Edward Wineburgh and Mr. Price positively identified Bliss and Young, who were arraigned here to-day and held for examination, July 26. Bliss and Young protested their innocence. Both men were very nervous when arraigned in court to-day and refused to plead until they had consulted counsel.

Two gold watches are offered by Ralph B. Cohen, Steubenville, O., one for the member of the local baseball team who obtains the highest batting average, the other for the member who first hits Mr. Cohen's sign on the right field fence with a batted ball during a regular game.

T. W. Gurley, Meyersdale, Pa., was recently notified that his father, L. F. Gurley, Hazen, Md., had been severely injured, having fallen from the top of a wagon load of sheaf wheat, striking head foremost on a fence post. The elder Mr. Gurley is slowly recovering from his injuries.

JOHN W. BLISS.

ALBERT YOUNG.

Two of the four men accused of carrying out the daring daylight robbery in the store of Joseph Wineburgh & Sons, at Utica, N. Y.

munication with Chief of Police Cleveland and his men and work on the case was begun at once.

The robbery happened about 1.15 p. m., and the absence of the diamonds was noticed five minutes later. Had the thief who worked the show case closed the door, the quartette might have got an hour's lead on the police. Frank Dunn, a boy employed in the store, noticed the opened show case and the absent tray. He notified Hyman Wineburgh, senior member of the firm, who saw at once that the house had been made the victim of an unusually daring daylight robbery.

The Wineburgh store is laid out in good shape for the robbery so successfully made yesterday. It is L shaped, the diamonds and more expensive jewelry being located in front of the store and near the entrance, while the office and packing counter is in the rear part and out of view of the front part of the store. The layout had been carefully studied by the diamond thieves.

The thieves are described as follows: No. 1—Man about 32 years of age, giving his name as John Bliss, and now under arrest. It is believed that Bliss engineered the diamond steal. Bliss is about 5 feet 5 inches in height, and weighs about 130 pounds. He has two scars on the left side of his face, one on the cheek and the other on the lower part of the jaw. Bliss wore a

sunburned and their general appearance indicated that perhaps they have been following race track horses or working Summer resorts.

The robbery was exceptionally well planned. The scar-faced man, who says his name is Bliss, was the first to enter the store about 12.30 p. m. Hyman Wineburgh waited upon him. He asked for diamond scarfpins, but could not find one to suit him. After looking about but making no purchases, he left the store, and about that time Mr. Wineburgh left for lunch. Bliss said he wanted to seek the opinion of a friend before buying a scarfpin which he fancied. Bliss returned to the store about 12.55 o'clock, and Edward Wineburgh waited upon him. He was again shown the tray of diamond pins. Then he asked to see some ladies' pins, and later some loving-cups and clocks.

While Bliss was occupying Edward Wineburgh's attention the man supposed to be Young and the third thief entered the store, and James E. Price, the bookkeeper, waited upon them. They wanted to look at some clocks. Young accompanied Mr. Price toward the rear of the store, while the third man leaned on a case near the diamond counter and toward the door. Young finally picked out a cheap clock and asked that it be packed up in a box for shipment. Mr. Price set the clock at 1.15

PARIS, FRANCE—35 Rue des Trois Bornes

49 MAIDEN LANE, NEW YORK CITY

Death of Capt. Chas. G. Browne.

BOSTON, Mass., July 19.—Capt. Charles G. Browne, well known in the jewelry trade, with which he had been identified from his youth until last March, when he engaged in business in other lines, died suddenly while on a yachting cruise last Monday night. He was one of the judges, acting fleet captain, and a member of the regatta committee of the Boston Yacht Club, whose squadron was on its way to Portland, Me., when he was stricken with paralysis. He was removed from the yacht to the Maine General Hospital on arrival at Portland, and died there a few hours later. Captain Browne's most recent connection with the jewelry trade was in the employ of Foster & Co., retailers, on West St., this city. When a boy he worked for Shreve, Crump & Low, subsequently learning the trade of diamond cutter with the veteran Henry D. Morse. Later he went to New York, and was with Howard & Co. as salesman, both in their New York and Paris establishments. He was in business for himself in New York for three years, but in 1898 returned to Boston and engaged with Foster & Co., with whom he remained as head of their diamond department for nearly eight years. He was about 49 years of age, and leaves two children, a son and a daughter.

Funeral services were held to-day at his residence, 760 E. 4th St., South Boston. Foster & Co. and former associates of Mr. Brown there sent a handsome floral tribute in token of their esteem. The interment was in Forest Hills Cemetery.

Death of Andrew K. Jobe.

JACKSON, Tenn., July 18.—The death Friday of Andrew Krecken Jobe caused deep regret and profound sorrow, not only to his many friends and business acquaintances in this vicinity, but to the jewelry trade throughout the south, in which the deceased had been long one of its most prominent members. Death was due to typhoid fever, from which he had suffered for two weeks. He, as well as his three sons, were stricken with the disease, but the sons recovered, while Mr. Jobe grew gradually worse until the end.

Andrew K. Jobe's interests in the jewelry trade were widely spread, and he had not only one of the most prominent stores in Jackson and the vicinity, but also owned an establishment at Water Valley, Miss., and was the head of the Jobe-Rose Jewelry Co., of Birmingham, Ala. He was 40 years old and had been in business in this city since 1888, having come here from Columbus, Miss., in that year. From the start he was prosperous, his energy, industry and ability as a business man bringing him a clientele that assured to him a successful career. As his business grew he opened a store in Water Valley as a branch of the establishment here, and later, in 1902, with J. N. Rose, opened another store in Birmingham, Ala., under the style of Jobe-Rose Jewelry Co.; this business he incorporated subsequently with a capital of \$20,000, becoming its president and treasurer. Mr. Jobe was also for a time interested with George H. Geer, of the Jackson Loan & Jewelry Co., but sold out his interests in the latter in 1905, and of recent years had

devoted almost all his time and attention in building up the business here, and at Water Valley.

The deceased is survived by a widow, a daughter, three sons and a mother.

Massachusetts Labor Bureau Reports on Jewelry Pledged at Boston.

That hundreds of thousands of dollars worth of jewelry finds its way into the hands of Boston pawnbrokers has long been realized, but the Massachusetts Bureau of Statistics of Labor has just concluded a detailed study of the subject. In making an investigation of the subject of uncollectable debts the Bureau's men were met far and wide with the complaint that the principal reason for these debts was the wage earners' Saturday night visits to saloons, forcing the family on Saturdays and Mondays to pawn articles of value to get the necessities of life.

To test the truth of this an exhaustive examination was made of the Boston pawnbrokers' records. It was confined to a study of the pledges taken in Saturdays and Mondays for the entire year. The report is filled with elaborate tables, but the gist of them is that on the 52 Saturdays 29,578 pieces of jewelry were pawned by needy Bostonians, who thus raised \$151,416.88. On the 52 Mondays they pawned 32,011 pieces, raising \$181,812.73; the total being 61,589 pieces of jewelry, which raised \$333,229.61.

The number of pieces of jewelry pledged was 50.28 per cent. of all the goods pledged in Boston for the entire year, and the amount loaned on it by the pawnbrokers was 78.41 per cent. of their total output for the year.

The concluding table shows the details of this Saturday and Sunday surrender of jewelry by its owners:

Death of Abraham Jaffee.

Abraham Jaffe, of A. Jaffe & Son, wholesale jewelers, 179 Henry St., New York, died Wednesday of last week at his home at the same address. Mr. Jaffe was 52 years of age. He was born in Russia and came to New York a number of years ago, starting in the jewelry business in a small way at 152 Henry St., subsequently removing to his present address. In May of last year Mr. Jaffe's son, Isaac Jaffe, was admitted into partnership, and a branch office was opened at 51 Maiden Lane in charge of the son.

Mr. Jaffe was a man of industrious habits, and in a comparatively few years built up a considerable business, at the same time winning the respect of the people with whom he was brought in association. The funeral took place at his home Thursday at 1 o'clock and was largely attended by friends.

Retail Jewelers of Oklahoma Organize Association at El Reno.

GUTHRIE, Okla., July 18.—Retail jewelers of Oklahoma have effected a State organization and will send delegates to the convention to form a national organization, which will be held in Rochester next month. The Oklahoma association was formed at a meeting held in El Reno July 12, and has as its object the protection of its members against the competition of mail order houses, the retailing by jobbers, etc., as well as the aiding in the enforcement of the gold and silver stamping laws, and encouraging the movement to obtain the same in this State.

The association elected as president J. F. N. Lloyd, Pond Creek, and as secretary, E. W. Eisfelder, Lamont.

Two More Jewelry Robberies at Cleveland, O.—Brunner Bros. Co. Lose Stock Worth \$1,000 from Show Case.

CLEVELAND, O., July 21.—A most daring robbery occurred about noon Saturday, when the street show case of the Brunner Bros. Co., in the Standard building, was robbed of about \$1,000 worth of stock. Of this almost half was recovered, having been dropped by one of the thieves in his flight.

Stories differ as to the number of persons engaged in the robbery. Some think three men were engaged in the job, while others say there was but one. The case was opened with a piece of wire and a duplicate key. The first thing people on the street noticed was that a clerical looking young man was removing the goods from the top shelf of the case. He was working as if that was a part of his business. A man passing along the street did not like the looks of things, and watched the fellow. At that he ran down a blind alley at the side of the J. L. Hudson Co.'s store, and, though pursued, found a way into the Arcade and thence out on Superior St., where he was lost in the crowd. He left his hat behind, however, and this may form a clue to his identity.

Several diamond rings, a diamond stud, several brooches set with diamonds and some watches made up the main part of the goods taken. The doorman at the J. L. Hudson Co.'s store had been guarding the case, but he was called to the basement for something, and the robbery took place while he was gone.

The description of the man, as given by two men who saw him, is as follows: About 22 to 24 years of age, 5 feet 9 inches tall, light hair, face thin, light and smooth shaven, light blue eyes, narrow aquiline nose, and ears which stand out. He wore a blue coat and light trousers.

Some who saw part of the robbery say that there were three men, and that this one passed a portion of the goods to the others, who disappeared in the crowd and were lost to view. No descriptions of these men were given. It is also said that one of the men stood with his back against the case while the other opened it with the key. The boldness of the plan threw people off their guard or the man might have been caught easily.

A man giving his name as Lewis B. Smith, of Hamilton, O., was arrested early Thursday morning. He had marked out a square on the display window of Harry Goldberg, in the Cuyahoga building, with a glass cutter, and was beginning to tap out the piece when the watchman of the building stepped out. Smith took to his heels and around the corner ran into the arms of two patrolmen. In the police court he claimed to be a farmer, but his hands did not prove his assertion. He said that he had purchased a watch in Cincinnati which proved to be brass, and that he intended to take one of the watches he saw in Mr. Goldberg's window and replace it with his brass timepiece. He was bound over to the Grand Jury. The police officers believe that he is new to the burglary business.

After the burglary of the three jewelry stores, reported in THE JEWELERS' CIRCULAR last week, the police made eleven arrests.

Three of the men they found provided with revolvers and a bottle of nitro-glycerine. One of these is a man from Canton, who was in trouble at Columbus some months ago. The police believe they have the leaders of a gang of burglars.

Daring Theft of Pearl Studs from New York Jeweler Followed by an Arrest.

James McCrosson, 26 years old, who says that he lives in W. 66th St., New York, was arrested last Wednesday, charged with stealing three pearl studs from the counter of A. Frankfield & Co., at 38 W. 34th St., Manhattan. After McCrosson was locked up in the W. 30th St. police station he was brought before Magistrate Barlow, of the Jefferson Market Court, who held him in \$1,500 bail.

McCrosson, who is said to have almost as many other names as he had pawn tickets in his possession, is believed to be the same man who visited the Gorham

detective Cassasa and Patrolman Bull later arrested McCrosson.

Numerous pawn tickets, bearing various names, were found in the prisoner's possession. These tickets showed that three pearl studs had been pledged with a West Side pawnbroker. It is said that the tickets bore the date on which the pearls were missed.

Mr. Frankfield visited all the pawnshops in the vicinity and notified them, after the robbery, that the gems were stolen, and that he wished to be informed in case anyone called to pawn the pearls, which he described.

Mr. Frankfield, accompanied by a detective, went to the pawnbroker with whom the pearl studs had been pledged. The pawnbroker refused to allow Mr. Frankfield to examine the pearls. The detective, however, succeeded in examining the gems, and he noted the numbers on their backs. It is said that these numbers corresponded to the numbers of the stolen articles, but the jeweler has not yet recovered his property.

It was said that the Bailey, Banks & Biddle Co., Philadelphia, Pa., are looking for a man of McCrosson's description, and two associates, whose names were given as McDonald and Brennan.

After McCrosson was arrested several jewelers who were robbed in similar fashion went to the station to see whether they could recognize the man. One jeweler from Brooklyn was asked to pick out the man who he thought had robbed him. McCrosson was picked out of a crowd by this man. When the Brooklyn jeweler appeared in court on Thursday he was uncertain as to the identity of the prisoner.

Death of Geo. E. Lowen.

CHARLESTON, S. C., July 18.—Few deaths that have occurred in the jewelry trade in this vicinity for some time past have occasioned greater sorrow than did that of George E. Lowen, recently, the deceased having been extremely popular both in trade and social circles.

Mr. Lowen was a native of Ireland, and was born in Dublin in 1852. After learning the printing business in a large establishment owned by his father, he later moved to London, and had his interests directed to the jewelry trade through the fact that his brother was a secretary to the Goldsmiths' Co. Later he went to New York, and after spending five years in that city, moved to Charleston in the latter part of 1886 and entered the employ of James Allen & Co., with whom he remained for several years. About 1892 he left that firm to engage in business for himself, and from that time until his death conducted a store at his home, 82 Smith St., this city.

Deceased is survived by a widow and three sons, one of whom will continue the business.

Edgar A. Fitz, a jeweler of Columbus, O., filed a petition in bankruptcy in the District Court of the United States Wednesday, giving liabilities as \$757.35, with no assets.

McNichol & Pethick, Stratford, Ont., removed recently to Fort William, Ont., Canada.

JAMES MCCROSSON, CHARGED WITH ROBBERING A. FRANKFIELD & CO.

Co.'s store on Fifth Ave., July 17, where he was carefully watched because he resembled another man known to be a jewelry thief. After the supposed crook left he was followed by Store Detective Larkin. The man made his way to Frankfield's. The detective told his suspicions to Mr. Frankfield. The supposed crook left without anything more happening.

On the following day a man said to be McCrosson entered Frankfield's, but was not recognized as the suspected man at once, because he had on a different suit and hat. He asked that some pearl studs be shown to him, and a salesman took out a tray of pearl studs which had been carefully examined by the stock clerk a short time before. After looking at the pearls the visitor remarked that he would call again with his brother, who wished to select the gems. The visitor then started to leave the store.

Looking over the tray, the salesman saw that three pearl studs were missing. De-

Gorham Mfg. Co. to Abandon Stock Transfer Plan—Meeting to Act on New Plan for Selling Affiliated Companies.

Officers of the Gorham Mfg. Co. have concluded to abandon the project for selling the several affiliated companies to the Silversmiths Co. of New York, whose capital stock, under the proposed plan, was to be enlarged. A meeting of the Gorham Mfg. Co.'s stockholders has been called for Aug. 1 to take action formally abandoning the project, and also to act on a new plan for the sale of capital stock in other corporations now owned by the Gorham Co.

The following circulars sent out to the stockholders from the offices at Providence, R. I., explain the situation:

To the Stockholders of the Gorham Mfg. Co.:

Enclosed please find a notice of a special meeting called for the purposes stated in said notice.

In order that you may more fully understand the reason for and subject of the proposed special meeting, I am directed to make the following statement:

The plan heretofore presented to you that the Gorham Mfg. Co. first enlarge the capital stock of the Silversmiths' Co. of New York and thereafter sell to the enlarged company shares of the capital stock, owned by the Gorham Mfg. Co. of certain other corporations, has been attacked in the courts by Mr. George H. Robinson as a stockholder, and has been enjoined by the Court of First Instance upon grounds, among others, that the Gorham Mfg. Co., under its present charter, is a manufacturing corporation, and that its powers to hold shares of stock in other corporations are only incidental to its main or primary purposes, of manufacturing gold, silver and other goods.

Our counsel have advised that, under all circumstances, the views of the court in so far as these views are unfavorable to the aforesaid plan attacked should be adopted, and therefore, that the plan that the Gorham Mfg. Co. first enlarge the capital stock of the Silversmiths' Co., and thereupon sell to such enlarged company the shares of the capital stock of certain other corporations owned by the Gorham Mfg. Co. should be abandoned.

Because of this advice, and because of the apparent limitations of our charter, and also for business and financial reasons, it has been decided by the board of directors to sell and convert into cash for the benefit of your treasury the shares of capital stock owned by this company of the other companies named in the enclosed notice.

In order that the directors might recommend to you a price at not less than which these stocks should be sold, your directors have made careful investigation as to the value of the stocks proposed to be sold, and have concluded that the fair and adequate value and the price at not less than which the aggregate of said stocks should be sold, is the sum of \$1,627,440.

Your directors have received a definite and reliable offer to purchase this capital stock at the foregoing price, and with a condition that, if the purchase is made at the price above mentioned, all stockholders of the Gorham Mfg. Co., without distinction as to class, may come in and participate in the purchase, pro rata, according to their several holdings.

The report of the committee of the directors appointed to ascertain the value of the capital stock proposed to be sold, and the opinion of counsel, as to the course which should be pursued by this company under the circumstances, are both on file with the secretary of this company, and are subject to inspection by any stockholder of the company during business hours on application to the secretary.

All of which is respectfully submitted.

J. F. P. LAWTON, Secretary.

By order of the Board of Directors.

To the Stockholders of the Gorham Mfg. Co.:

A special meeting of the stockholders of the Gorham Mfg. Co., will be held at the office of the company, in Providence, Rhode Island, on Wednesday, the first day of August, 1906, at 3 o'clock, to take action upon the following recommendations of the Board of Directors:

"That the plan that the Gorham Mfg. Co. first to enlarge the capital stock of the Silversmiths' Co.

of New York, and thereafter sell to such enlarged company the shares of the capital stock owned by this, the Gorham Mfg. Co., of other corporations, be abandoned.

"That all of the shares of the capital stock, owned by this, the Gorham Mfg. Co., of the following corporations:

"Whiting Mfg. Co., the Silversmiths' Co. (of New York), the Silversmiths' Co. (of New Jersey), William B. Durgin Co., and the William B. Kerr Co., be sold for not less than the price of \$1,627,440 in the aggregate; and that, if sold for not more than the price above mentioned, the sale be upon the condition that the purchaser permit all stockholders of the Gorham Mfg. Co., without distinction as to class, to participate, if they so desire, in the purchase.

"That the sale be made at such a time and in such manner as the stockholders may direct, in order to realize the best price obtainable, and to transact such further business as may properly come before the meeting.

"Dated, Providence, R. I., July 20, 1906.

"J. F. P. LAWTON, Secretary

"By order of the Board of Directors."

Death of Christian Strobel.

WATERBURY, Conn., July 23.—Christian Strobel, president and treasurer of the Lake & Strobel Co., died last Friday after an illness of two years from bronchial tuberculosis, at his home, 114 N. Willow St.

Christian Strobel was born in Wittenberg, Germany, Dec. 25, 1866, the son of George John and Lucia (Schlegel) Strobel. He came to Waterbury with his parents when six months of age. Practically his whole life was spent in this city.

His only education was that of the public schools of the city, which he attended until he was 10 years of age. He then entered the employ of the City Manufacturing Co., where he worked for two years. At the age of 12 he signed with E. A. Locke, William Weeden and George Merritt, who had organized the Waterbury Watch Co., as an apprentice watchmaker. He served here for three years, when he changed his service to that of D. C. Callender & Co.

At the age of 19 he purchased Mr. Callender's interest in the business, which was located in the same building it now occupies, under the name of the Lake & Strobel Co.

George T. Lake joined with Mr. Strobel in forming the co-partnership of Lake & Strobel. In 1896 the Lake & Strobel Co. was organized, with Mr. Strobel owning practically all of the stock.

One of the enterprises in which he took an active interest during the last years of his life was that of the Woodbury Electric Railway. Much of his time was taken up, with that of three others, in securing rights of way and charter rights for this road. He was also more or less interested in the development of Lake Quassapaug as a pleasure resort.

Mr. Strobel was one of the most popular young men in the city. He was a man of kindly and charitable impulses, helping many others effectively and without ostentation. In business he displayed rare capacity, and his advice was frequently sought by others.

The deceased leaves one brother, George J., and one sister, Emma. His father, George J., died about eight years ago, and his mother, Lucia Schlegel, about six years ago. There are no other near relatives.

The funeral took place yesterday from his residence, the Rev. Mr. Lewis officiating. Burial was in Riverside Cemetery.

The Aikin, Lambert Co. Reorganized—Report of Combination Denied.

Announcement was made last week of the reorganization of the Aikin, Lambert Co., 19 Maiden Lane, New York, manufacturers of gold pens, fountain pens, etc. The change in no way affects the Aikin, Lambert Jewelry Co.

The old charter of the Aikin, Lambert Co. was obtained under New Jersey laws, and recently when it expired the business was reincorporated under the laws of New York. On the reincorporation two members of the old company, H. A. Lambert and John B. Shea, sold their interests. Mr. Lambert, who is now on a western trip, will continue to give his attention to the business until the end of the year. Mr. Shea, who had been connected with the business more than 40 years, and has been the superintendent of the factory for a long time, retired in order to take a rest, which his associates feel he had abundantly earned.

James C. Aikin is the president of the reorganized company, and, it is announced, he will continue so indefinitely. It is further said that the changes were made because officers of the old company, getting along in years, felt that they were entitled to a little more ease, and that an infusion of new blood would be desirable.

Mr. Shea's interests were sold to W. I. Ferris, of the L. E. Waterman Co. No announcement was made as to whom Mr. Lambert sold his stock. Reports that the Waterman Co. had secured control of the Aikin, Lambert Co. and that this was the beginning of a combination in the gold pen and fountain pen business were denied by members of both companies. It was said that Mr. Ferris had bought Mr. Shea's stock purely as an investment, with no other movement to influence him.

An interesting incident which occurred just before Mr. Shea's retirement from the factory was a present to him in behalf of the employees of an individual silver loving cup. He lives on Vanderwater St., and has been active in educational work, filling the position of School Commissioner in his district.

Death of Harry Helms.

STEUBENVILLE, O., July 18.—The sudden death of Harry Helms, the well-known jeweler, was the subject of much comment and sorrow among his many friends last week, Mr. Helms having passed away suddenly Thursday morning. He was discovered by his brother lying at the foot of the bed in his night robe, and it is supposed that he died of heart failure.

The deceased was 40 years old, and had been in the jewelry business since 1888. He continued until 1896, when he met with reverses and was succeeded by his father, A. M. Helms, for whom he worked for some time. Last December, with his brother, Edward, he purchased his father's interests in the business, and the two continued it from that time under the style of Helms' Jewelry Store. Mr. Helms was widely known in the vicinity and well liked. He had been in poor health for some time.

Hollins Bros., Crowley, La., have dissolved, Edward J. Hollins continuing.

Diamonds Set Without Cost

Means a lot of money saved during the year. This you can do very easily if you have your settings done by a first-class setter. Your diamonds will improve in value more than three times the money you pay for setting them. At the same time your mountings improve greatly. Your customers are satisfied with all the orders you turn out. You can compete with all others who are slow in grasping the importance of these facts, by giving me all your settings. I am sure you will make no mistake as I will prove these facts.

I make a specialty of setting fine Platinum Mountings, Watch Cases, Lockets and Gypsy Settings.

Programme of Conventions at Rochester, N. Y., of American Association of Opticians and of State Organization.

ROCHESTER, N. Y., July 23.—Arrangements are practically completed for the convention of the American Association of Opticians which will be held in this city July 30 and 31, Aug. 1 and 2. The arrangement committee has for the past several weeks led a strenuous life in securing accommodations for the guests. Realizing that hotels and boarding houses would not be adequate, rooms have been secured in private houses, and there is no doubt that all visitors will be taken care of in the very best manner.

The committee on exhibits has been obliged to refuse many applicants for space. It is said by those who have visited other conventions that the exhibits this year will be far ahead of those at previous meetings.

The convention of the Optical Society of the State of New York will probably consist of the necessary routine business meeting and the election of officers. It will be held here on July 30, morning and afternoon.

The following programme has been arranged:

Monday, July 30, 11 A. M.—Opening session Optical Society of the State of New York. 2 P. M.—Second Session State Society. 8 P. M.—Opening session of American Association of Opticians. Address of welcome by Mayor James G. Cutler and response by John C. Eberhardt, Dayton, O. Annual address by B. B. Clark, national president. Reports of the secretary, William E. Huston, Kansas City, Mo.; and the treasurer, J. K. Stebbins, Ashtabula, O.

Tuesday, July 31, 8.30 A. M.—Meet at Convention Hall to start for visit to E. Kirstein's Sons Co., Court St. 9.30 A. M.—Business session. Addresses by Dr. Arthur O. Campbell, Topeka, Kans., "Health Ray Lenses;" E. LeRoy Ryer, New York, "The American Optometrical Academy;" R. E. Lockwood, New York, "The Eye an Imperfect Optical Instrument;" E. C. Bernheim, Providence, R. I., "Errors in the Business of the Optician;" Ernest Eimer, Muskegon, Mich., "The Physiological Section, Past and Future." 1 P. M.—Meet at Convention Hall to start for visit to Bausch & Lomb factory. 8 P. M.—Eye testing clinic, conducted by Physiological Section; demonstrator, Prof. Samuel S. Grant, Montreal, president Physiological Section. Muscle testing clinic in charge of librarian of section, C. M. Jenkins, Richmond, Ind.; demonstrators, Dr. John H. Ellis, South Bent, Ind., and John C. Eberhardt, Dayton, O.

Wednesday, 8.30 A. M.—Business session of Physiological Section. Addresses by John Eberhardt, Dayton, O., "Monocular Amblyopia Due to Congenital Corneal Asymmetry;" Geo. W. McFarrich, M.D., Chicago, "Correction for Myopes;" Edward E. Arrington, "Legislation;" H. P. Holmes, Des Moines, Ia.; Samuel S. Grant, Montreal, "The Eye in Comparative Anatomy." 1 P. M.—Meeting of members and visitors at Convention Hall to start for Eastman Kodak Works, Kodak Park. At the conclusion of visit to Kodak Park a trolley and steamboat trip. The official photograph will be taken at Kodak Park. 8 P. M.—Addresses by C. M. Jenkins, Richmond, Ind., "Some Diseases Essential for the Optometrist to Recognize;" Chalmers Prentice, M.D., Chicago, "The Soul and Its Immortality Proven by Science;" Earl J. Brown, M.D., Chicago, "Mechanism of Accommodation," illustrated by stereopticon; H. L. DeZeng, Philadelphia, "The Illumination of the Eye by Direct and Oblique Methods;" E. Culverhouse, Toronto, Can., B. O. A., "Things in General."

Thursday, 9 A. M.—Visit to Taylor Bros.' thermometer factory. 11 A. M.—Address by Chalmers Prentice, M.D., "The Eye in Relation to Health." During this address a free clinic will be held, demonstrating the effect of lenses in cases of stammering, partial deafness, St. Vitus dance and shaking palsy. 1.30 P. M.—Unfinished business. Vote on next meeting place. Election of officers. Evening—Banquet.

The Physiological Section will conduct an eye testing room during the convention, where all the latest improved instruments and methods will be explained. Ernest Eimer, Muskegon, Mich., will be in charge. Prof. R. M. Lockwood, of New York, will act as demonstrator.

The association is indebted to the Bausch & Lomb Optical Co., the Eastman Kodak Co., Taylor Bros. Co., and E. Kirstein's Sons Co. for the entertainment and banquet to be furnished its members and visitors.

The present officers of the American Association of Opticians are: B. B. Clark, president; Briggs S. Palmer, Boston, first vice-president; W. C. Sommers, Springfield, Ill., second vice-president; J. K. Stebbins, Ashtabula, O., treasurer; William E. Huston, Kansas City, secretary.

Executive Committee—George Bausch, Rochester; S. B. Millard, Minneapolis; Alexander Martin, Philadelphia; H. J. Cook, Knoxville.

Regents—E. Culverhouse, Toronto; Clarence S. Hart, Lynn, Mass.; W. Eisensmith, Charleston, W. Va.

Physiological Section—Samuel S. Grant, Montreal, president; Ernest Eimer, Muskegon, Mich., secretary; C. M. Jenkins, Richmond, Ind., librarian.

Chicago Jeweler Holds Two Robbers at Bay Until the Police Arrive.

CHICAGO, July 23.—An attempt to hold up a jeweler last night resulted in the tables being turned upon the robbers, who were held captive until turned over to the police. The prisoners described themselves as Thos. Titik and Jas. Koster, 22 years old, both of whom the police claim to know. The man whom they attempted to rob, but who proved to be too much for them, is Anton Butka, a jeweler at 591 Blue Island Ave. The men are locked up in the Canal Port Ave. Station.

According to the police reports, Butka was alone in his store when the two men entered and asked to be shown some diamond rings. Suspecting them at once the jeweler placed a tray of rings before them, but while they were making a selection quietly secured a revolver. Suddenly one of the men started to draw a pistol while the other seized the tray of rings and tried to back out of the store. This was what Butka was expecting, and quickly covering the men with his revolver he bolted the door, and, keeping the "drop" on his prisoners, held them while his wife telephoned to the police.

Death of Allan Garretson.

DETROIT, Mich., July 23.—Allan Garretson, aged 71, formerly one of Detroit's well-known jewelers, died last week after an illness of seven months. He was born 71 years ago in Logan, O. After serving in the Civil War he came to Detroit and entered the jewelry trade with M. S. Smith, the firm name being M. S. Smith & Co. Garretson, in his younger years, was active in politics, being a close friend and staunch supporter of Senator R. A. Alger.

The funeral was largely attended. Interment was in Woodmere.

The business conducted by Chas. B. Collins, Groton, S. Dak., has been incorporated as the C. B. Collins Co., with an authorized capital of \$18,000.

Programme of the National Convention of Retail Jewelers to be Held at Rochester, N. Y.

ROCHESTER, N. Y., July 20.—There is considerable speculation here, both among jewelers and hotel keepers, as to how many out-of-town members of the trade will be in this city Aug. 3 and 4 as a result of the convention of the American Retail Jewelers' Association, to which will be sent delegates from the many State associations which have been formed recently, for the purpose of organizing a representative national association of retail jewelers of the United States.

The convention, which will be held at Haines Hall, is expected to begin promptly at 9.30 A. M., Aug. 3, when the first session will be held. This session will be opened to jobbers, manufacturers and retailers. It is expected that a large number of jobbers and manufacturers will be represented here, but inasmuch as the convention of the American Association of Opticians will be held just previous to the opening of the jewelers' convention, it is generally expected that a large number of the jeweler-opticians who come to the former will stay for the latter, if only to take part in those sessions of the jewelers which will be open to every legitimate member of the retail trade, without regard to whether he is affiliated with or belongs to any organization.

The interest evinced by the local jewelry trade in the convention has not been as great as would naturally be expected, but it is thought that greater consideration may be given the project when the time of the meeting draws near.

The final programme of the convention has been made public, and is as follows:

1. Address of welcome, President Max Jennings.
2. Report of Secretary E. R. Roebm.
3. "Advertising Value of Jewelers' Show Windows," Mack A. Hurlbut.
4. "Federal Control of Interstate Commerce," Hon. E. B. Vreeland.
5. "Organization—Its Difficulties and Its Possibilities," A. L. Sackett.
6. "Organization from the Standpoint of the Manufacturer," S. O. Bigney.
7. "The Growth of Organizations," W. B. Roberson.
8. "Local Association Experiences," J. M. Nabstedt.
9. "A Few Reasons Why We Are Here," F. W. Jameson.
10. Closed session.

[Temporary adjournment of the American Retail Jewelers' Association into a "Committee of the Whole." This session will be closed to all except regular, legitimate retail jewelers. Every retail jeweler at the convention, whether or not he is a member of the American Association or any other jewelers' association, is invited to participate in this "general session" for the purpose of recommending the best manner to effect a peaceful and harmonious union of all the jewelers' associations now in existence.]

11. Session of the American Retail Jewelers' Association to consider the recommendation of the "Committee of the Whole."
12. Reports of committees.
13. Election of officers.
14. "Retail Advertising."
15. "Retail Mail Order Question."
16. "The Retailing Jobber."
17. "Fake Auction Sales."
18. Remarks for the good of the order.
19. General Trade Topics.
20. Resolutions.
21. Adjournment.

MILWAUKEE, WIS.

Progress Made by the Pennsylvania Retail Jewelers' Association.

PITTSBURG, Pa., July 18.—From present appearances it looks as if the Pennsylvania Retail Jewelers' Association, organized in this city July 10, was not only going to be a success, but would soon have on its roll a large proportion of the leading jewelers of every city in the State. Letters of congratulation have been coming in to the officers, and the interest evinced in the organization shown not only by Pittsburghers but those in other cities who could not attend the convention, and, in fact, knew nothing about it until after the organization took place, indicates that the movement will have the support of a very large part of the jewelry trade. C. S. Wiley, this

C. S. WILEY, SECRETARY PENNSYLVANIA RETAIL JEWELERS' ASSOCIATION.

city, the secretary of the association, has received letters from many firms who wish their names added to the roll of members. The complete list of charter members is as follows:

A. Katzenmeyer, Burgettstown; D. L. Cleeland, Butler; H. G. Phillips, Vandergrift; E. Krone, Clarence; John Forschner, Jeryn; C. H. Jaquette, Scottdale; C. C. Jaxtheimer, New Wilmington; G. M. Smeigh, Milroy; N. W. Pinkerton, Mannheim; F. M. Langnecker, New Brighton; Carl Revinus, Ebensburg; J. J. Consedine, Lebanon; Jerry Benninghoff, Greenville; Archibald Thistle, Washington; John F. Beyerle, Reading; L. J. Resnor, Allegheny; R. S. Bush, Coudersport; C. E. Penman, Hazleton; John Yenny, East Pittsburgh; C. W. Parker, Westfield; Charles H. Hamer, Philadelphia; William Haines, Philadelphia; Frank R. Coe, Pittsburgh; Joseph Bickart, Wilkinsburg; V. Cowles, Point Marion; I. E. Isaacs, Pittsburgh; T. H. McNary, Washington; Philip Ruprecht, Sharpsburg; F. E. Leitzell, Scottdale; W. S. Roe, Allegheny; Frank L. Wells, Marion Center; J. Frank Bloser, New Kensington; P. C. Yester, McKeesport; G. A. Spies, Pittsburgh; A. C. Gaul, Sharpsburg; J. P. Steinmann, W. F. Steinmacher, C. S. Wiley, Pittsburgh; S. S. Snyder, Dayton; A. Redfoot, Mt. Jewett; A. L. Gettys, Buffalo Mills; E. A. Malsberry, Rockwood; N. H. Thompson, Scotch Hill; E. Mouillesseaux, Towanda; Frank E. Burr, Carbondale; Fred Quartier, Saltsburg; H. Held, Pittsburgh; T. S. Hoffman, Derry Station; Stewart & Son, Huntingdon; Robert Gestrich, Pittsburgh; Roger Gray and C. E. Snyder, Allegheny. Many others will join.

SHARPSBURG, Pa., July 21.—A. C. Gaul, of this city, president of the Pennsylvania

Retail Jewelers' Association, has announced the appointment of the following standing committees for the association:

COMMITTEE ON TRADE INTERESTS.—C. W. Parker, Westfield; Chas. H. Hamer, Philadelphia; W. F. Steinmacher, Pittsburgh.

COMMITTEE ON LEGISLATION.—D. L. Cleeland, Butler; T. H. McNary, Washington; Wm. S. Roe, 1254 Beaver Ave., Allegheny.

COMMITTEE ON QUALITIES.—J. P. Archibald, Blairsville; Frank R. Coe, Pittsburgh; F. E. Leitzell, Scottdale.

COMMITTEE ON MEMBERSHIP.—P. C. Yester, McKeesport; Vet Cowles, Point Marion; Wm. Haines, Philadelphia.

COMMITTEE ON DECEASED MEMBERS.—G. A. Spies, Pittsburgh; Philip Ruprecht, Sharpsburg; J. Frank Blozier, New Kensington.

Death of Max Goldsmith.

WASHINGTON, D. C., July 19.—The funeral of Max Goldsmith, senior member of the firm of M. Goldsmith & Son, took place this morning from his late home, 1910 Calvert St. Rabbi Simon and Rabbi Stern officiated, and a large number of friends and business associates gathered to pay the last honors to the deceased. The interment was in Washington Hebrew Congregational Cemetery. Mr. Goldsmith passed away suddenly Monday evening after an attack of heart trouble.

The deceased was a native of Germany, and was 67 years old. He came to the United States when 11 years old, and first settled in New York before going to Washington. He started in the jewelry business over 30 years ago, and formed the firm of Prince & Goldsmith in 1874. This firm being dissolved in 1879, Mr. Goldsmith continued alone until August, 1890, when he admitted his son, Charles A., under the style of M. Goldsmith & Son. The firm continued without change up to the present time, the business growing until their store at 9-11 Pennsylvania Ave., N. W., became one of the most important as well as one of the best known in the city.

Mr. Goldsmith was prominent in Masonic circles, being a member of the Federal Lodge No. 1, Eureka Chapter, and was a 32d degree Scottish Rite Mason and a member of the Mystic Shrine. He was identified with several Hebrew fraternal organizations, and a prominent member of the Washington Hebrew Congregation, as well as the Royal Arcanum and National Union. Besides his son, who was associated with him, Mr. Goldsmith is survived by a widow.

A number of jewelers of Grand Rapids, Mich., have agreed to close their places of business at noon each Thursday during the months of July and August, giving their employes a half holiday on those days. The success of the movement is due to the work of the members of the J. C. Herkner Jewelry Co., 57 Monroe St., who were the first to sign and to circulate the petition. The jewelers who signed are: J. C. Herkner, E. J. Hervey, F. W. Wurzburg, P. J. Koke, J. J. Thompson, Joseph Siegel, A. Zierleyn, Vander Muelen & Son, W. D. Werner, F. C. Steglich, J. E. Ryan, A. Preusser, Carstens Bros., E. O. Prange, R. J. Warn, A. Open Dyke, A. Siegel, Pritchard & Price.

A Notable Sale of Jewels at London.

Cable messages from London say that the principal jewel sale of the season at Christie's took place July 11. A total of £70,178 (\$350,890) was realized from the sale of 175 pieces and lots. Toward this £10,000 (\$50,000) was contributed for a necklace of 47 large pearls with a single brilliant clasp.

At the sale of this necklace, Mr. Drayson open the bids with £3,700 (\$18,500), and at £7,000 (\$35,000) C. Thompson, of Agnew & Son, stepped in and remained to the end, though the final bid came from Mr. Holdaway. Mr. Tannenbaum secured a pearl rope, composed of 191 pearls, for £3,700 (\$18,500).

The same property included many more pieces of considerable value, notably a five-row pearl necklace, for which Mr. Mallett gave £2,500 (\$12,000); a pair of fine cabochon emerald and diamond earrings, bought for £1,350 (\$6,750) by Mr. Graham; an emerald and brilliant collet necklace, bought for £1,250 (\$6,250), and a fine oblong sapphire mounted collet border of brilliants as a brooch for £1,020 (\$5,100) by Mr. Hamilton, and three fine black pearls mounted as studs, bought for £1,000 (\$5,000) by Mrs. J. Phillips.

The late Lady Montgomery's necklace of 76 pearls went to Mr. Lyon for £780 (\$3,900). The same price was paid by Mr. Mallett for a collet necklace composed of 49 graduated brilliants and an oval brilliant snap. The miscellaneous properties included a five row pearl necklace, composed of 417 pearls of fine Orient, well matched and graduated, and with an oval brilliant clasp of foliage design. The hammer fell at Mr. Lowe's offer of £4,800 (\$24,000), Mr. Robinson being the under bidder.

To Mr. Lindenbaum fell for £2,350 (\$11,750) a necklace composed of three rows of 219 graduated pearls, with a pearl and brilliant cluster snap, while Mr. Tannenbaum gave £3,400 (\$17,000) for a necklace of 55 graduated pearls, with a square brilliant snap.

A New Eye Shade That Is Becoming Popular.

A NEW feminine vanity is the "maissette," a device for shading the eyes from the sun, made fashionable by the new Queen of Spain. It is an elaborate trifle of gold, pearl, carved tortoise-shell, etc., and is mounted on a long handle like the familiar lorgnette, says a daily exchange. English women are carrying the "maissette" to polo matches and race meetings. It is of course much less in the way than a parasol, yet saves the eyes from glare and wrinkles.

Another device carried for the same purpose is the automobile parasol, which is a tiny thing of silk and lace, set on a small jointed folding stick of pearl and ivory, and of less use for motoring than for garden parties or the church "parade."

Nathan Thomas, associated in business with his brother, E. L. Thomas, in Phoenixville, Pa., is at present confined in a hospital suffering with typhoid fever.

FREDERICK A. JEANNE

"GEMFINDER"

5 SQUARE de l'OPERA,

PARIS, FRANCE

Extends to the trade a cordial invitation to make his office their headquarters when visiting Europe for the purchase of Precious Stones. In order that his customers may enjoy the favorable opportunities that arise when they are not in the market, "Gemfinder" will, on his own account, pick up any desirable goods obtainable in European markets at attractive prices. His customers shall have the benefit of his expert selections at a mere commission above the purchase prices.

Boston.

F. W. Bird, with Foster & Co., has gone to Torbrook Mines, N. S., for an outing.

Sam Mendelssohn, of the Washington building, is on a three weeks' business trip in Maine.

William L. Clark & Co., jobbing jewelers in the Washington building, have given up their headquarters here, and Mr. Clark has gone to Memphis, Tenn.

W. E. Stormont soon leaves the employ of C. S. Blake, where he has been for the past four years, to take a position in the finishing department at the Waltham Watch Co.'s factory.

Harold B. Carruth, with Nelson H. Brown, is in camp at Fort Rodman with the 1st Regiment, M. V. M., of which he is a member. F. M. Rollins, inside salesman for Nelson H. Brown, is touring this week in southern Maine.

Work was resumed last week at the Waltham Watch Co.'s factory after the annual vacation, during which needed repairs were made. The company now employs about 3,600 hands, and is entering upon what promises to be a very busy season.

The Bentley Jewelry Co., of this city, through Treasurer Fred B. Guild, has filed with the Secretary of the Commonwealth the following annual corporation report: Leases, \$53,924; merchandise, \$10,468; good will, \$5,357; capital stock, \$50,000; accounts payable, \$6,425; surplus, \$7,745; profit and loss, \$5,579.

Harry Levison, charged with stealing jewelry valued at \$1,239 from Louis Sonnabend, was arraigned July 17 in the Superior Court, and held in continuance, with bail fixed at \$2,500. The articles alleged to have been taken include 30 watches, worth \$25 each, 30 rings worth \$5 each, three rings worth \$50 each, and 27 chains worth \$7 each.

Walter B. Snow, who was recently elected president of the Littlefield Silver Co., whose factory is at New Bedford, Mass., severed his connection with the Poole Silver Co., of Taunton, last week. He had been the Boston selling agent of the latter concern since its formation about 15 years ago, having an office in the Jewelers' building, which he will retain and make the headquarters of the Littlefield company in future.

New Orleans, La.

Coleman E. Adler has been in New York for the past week attending to matters having to do with the magnificent silver service which is to be presented to the battleship *Louisiana*. Mr. Adler has given the contract for the work to the Frank W. Smith Co., Gardner, Mass. The committees appointed under Mayor Behrman are still hard at work on their task of raising funds and gratifying results have already been achieved. Out of the 58 country parishes of the State, all have shown a readiness to respond to the call for funds with the exception of Avoyelles and Sabine parishes. Work on the service will be rushed and everything will be in readiness for the presentation when the vessel comes to New Orleans in October or November, according to the present plans.

Our Traveling Representatives

J. F. Dean, a traveling salesman for Reed & Barton, Taunton, Mass., has been spending a week at New York.

Frank H. Chace, Chas. M. Robbins Co., Attleboro, Mass., left Saturday for a trip to the far west, with his samples.

W. R. Cobb, of W. R. Cobb & Co., has been ill, at the Baltimore Hotel, Kansas City, Mo., for several days, but will continue his trip.

F. J. Bross, of the traveling force of L. Bauman Jewelry Co., St. Louis, Mo., has returned from an extended visit to Lake Minnetonka. Mr. Bross claims to have caught an eight-pound pike.

Among the representatives of wholesale houses who, recently, visited the trade at Detroit, Mich., were: B. J. Hirshom, Brown & Dean Co.; W. H. Cushman, Woodman-Cook Co.; Mark Franklin, Bradley Ring Co.

E. H. Ray, the Texas representative of the Edwards & Sloane Jewelry Co., Kansas City, Mo., was in Kansas City, Mo., this week, getting his trunks. He is the last of the representatives to get out on the road.

Julius Newman, of the Aller-Newman-Wilmes Jewelry Co., St. Louis, Mo., departed, Monday, for a trip through Missouri, and W. F. Wilmes, of the same firm, for a trip over his territory in Kansas and Oklahoma.

H. F. Wells, who travels for the Woodstock-Hoefer Jewelry Co., Kansas City, Mo., in Iowa and Minnesota, has been home for a week. E. C. Cleveland, who travels for the same company, has just started out on his Nebraska territory.

Among the traveling representatives in Lancaster, Pa., recently, were: Max Bauman; William H. Rowland, Meriden Britannia Co.; Charles Melchor, Aikin, Lambert & Co.; Allen Fellencer, N. H. White & Co.; C. H. Mountjoy, C. F. Rump & Sons; Thomas D. Bailey, Robert S. Gatter; A. Pretzfelder, L. W. Levy & Co.

Among the traveling representatives to visit Buffalo, N. Y., last week, were the following: H. P. Coulter, Libbey Glass Co.; Mr. Reed, Reed & Barton; H. H. Bönnel, Henry Ginnel & Co.; J. W. Cough, Hull Bros. Umherlla Co.; Alberto J. Schweizer, Ansonia Clock Co.; Benj. Schloss, A. Wallach & Co.; Thomas D. Bailey, Robt. S. Gatter; W. J. McKenna, Kelly & Steinman.

Among the traveling salesmen who called on the trade in St. Louis, Mo., last week, were the following: Robert E. Kehl, F. H. Noble & Co.; Alberto S. J. Schweizer, Ansonia Clock Co.; E. J. Haasm, Adolphe Schwob; W. K. Helmbold, National Optical Co.; W. A. Moore, F. W. Gesswein Co.; O. F. Samuelson, Towle Mfg. Co.; A. T. Hatch, S. B. Champlin Co.; L. Strauss, C. P. Goldsmith & Co.; Lewis P. Cook, S. Sternau & Co.

Traveling representatives who called on the Cincinnati, O., trade, during the past week, included: Fred Foster, Unger Bros.; W. M. Gibbs, J. Hoare & Co.; Mr. Lorenzo, Saunders, Meurer & Co.; C. W. Reynolds, C. W. Reynolds & Co.; F. C. Seines, Bates & Bacon; Mr. Cobb, W. R. Cobb & Co.; George R. Sweet, R. F. Simmons Co.; Arthur Bradshaw, International Silver Co.; Charles Untermeyer, Charles Keller & Co.; J. M. Torbert, Simeon L. & George H. Rogers Co.; A. M. Liebman, E. P. Reichelm & Co.

The following traveling salesmen have been calling on the trade in Kansas City, Mo., during the past week: H. W. Raymond, Worthington & Raymond; Abel King, I. Emrich & Co.; T. B. Ross, John Russell Cutlery Co.; D. N. Weil, Electric City Box Co.; Harry S. Aicher, Alvin Mfg. Co.; Edgar Huhn, Potter & Buffinton Co.; H. F. Chapman, Rockford Silver Plate Co.; Samuel Jacobson, Jacobson Bros.; Mr. Townsend, Kreis & Hubbard; W. A. Moore, F. W. Gesswein Co.; Robert E. Kehl, F. H. Noble & Co.

The following traveling representatives visited Omaha, Nebr., last week: Abel King, I. Emrich & Co.; A. I. Duval, H. C. Fry Glass Co.; C. Dominick, H. F. Hahn & Co.; J. Mednikow, J.

Mednikow & Co.; G. W. Milligan, Quaker City Cut Glass Co.; P. A. McCourt, Julius H. Brauer, Alfred M. Tanhauser, Wolfsheim & Sachs; H. W. Raymond, Worthington & Raymond; Hugh E. King, Queen City Silver Co.; Mr. Clark, Oncida Community, Ltd.; W. H. Torrance, Leys, Christie & Co.; J. M. Pool, American Silver Co.

Providence.

The Art Die Sinking Co. has engaged Edwin Scott, well known here and in the Attleboros as a skilled workman, as foreman.

Among the imports at the port of Providence last week were four packages of imitation precious stones from Bremen and one from Hamburg.

The following have been in town during the past week looking for novelties: Mr. Berg, New York; Miss Rosenbaum, Chicago; Miss Graff, New York, and Miss Roe, Chicago.

George Sylvester, who was an employe of the Ostby & Barton Co., was fined in the District Court last week for the theft of 12 rings, valued at \$40. He pleaded guilty when arraigned, and was sentenced to the Providence County jail for three months.

Last September, while on her way to the Agawam Hunt Club in an auto, Mrs. Stephen O. Metcalf lost a gold pin set with pearls and diamonds. The other day a Portuguese offered it for sale at a Bristol jewelry shop, and the police took possession of the circlet when they learned that the man had found it. Later it was returned to the owner.

Reed & Barton have filed a suit in the Superior Court against Charles E. Paine, of this city, alleging that the plaintiff was the owner of 25 dozen oyster spoons, 50 dessert spoons and a lot of other tableware, and that the defendant converted the same to his own use June 18, 1906. The damages are placed at \$800, though the price of the goods is alleged to have been \$844.80.

Jewelers Gold Bars Withdrawn and Exchanged at New York.

Week Ended July 21, 1906.

The U. S. Assay Office reports:
Gold bars exchanged for gold coin.....\$387,182.12

" 24.....	.64 7/8	.30d.

A horse tied to the street clock of L. T. Dillon & Co., Litchfield, Minn., became frightened and pulled away, wrecking the clock.

ELSIE BEE'S FASHIONS.

NOVELTIES SEEN IN A LADY'S RAMBLES AMONG THE JEWELERS.

A GOLD hunting-horn, winding once around an opal ball, is a peculiar and original design in scarf pins.

A necklace of uncut stones is said to be one of the latest ideas.

A fancy ring top shows an open design outlined in diamond scroll work and enclosing a fine, round pearl.

An otherwise plain gold basket for sweets has an ornamental top handle, embellishing the pretty trinket.

Diamond tiaras and diamond-topped back combs are sometimes pointed with clusters alone, or in alternation with the single diamond points.

The little foxes, that gnaw the vines, form an appropriate ornament for the handle of gold or silver grape shears, simulating the twisted vine.

Beautiful round pearls set high in the surrounding diamond work catch and retain the eye most pleasantly in a charmingly simple, but expensive, brooch.

A locket of unique effect is of perfectly plain, bright gold, in heart shape, with a good-sized turquoise framed with the same small gems as a central ornament.

An eminently chic appearance is imparted to a corsage ornament by a large, square-cut emerald, which simulates the knot in a costly ribbon bow, in diamond work, showing a pattern in the ribbon.

Pendant brooches are a pleasing variation on the usual styles, some being extremely ornate with pendants varying in size. In a design recently seen, the brooch of somewhat triangular form displayed a fine green tourmaline elaborately framed in diamond work, with square pendant, hanging cornerwise from the brooch itself. The pendant, being slightly smaller than the brooch, was composed of a similar green stone set about with diamond work.

One is perforce obliged to notice again the insistent bracelet which still proclaims itself a favorite of Dame Fashion; whether in styles extravagantly elegant or extravagantly simple, it matters not. In a recent display of the ever-popular gold-band bracelets and bangles, styles ranged from the slightest plain half-round models, through the twisted ropes, the chains, the perforated half-inch bands, the heavy half-round and inch-wide bands in gold filigree—plain, or set with stones, or perhaps set with a tiny watch. A pretty bracelet for a child shows squares of pink tourmalines framed in fine gold filigree, connected at top and bottom with a short row of round pearls.

The Josten Mfg. Co., Owatonna, Minn., has been incorporated with \$25,000 capital stock to manufacture watches and clocks, jewelers' fittings and tools.

AZTEC TURQUOISES

Mines: MINERAL PARK, ARIZONA.

TRADE-MARK.

Of true CERULEAN BLUE, the rarest and most fashionable shade. Turquoises bearing Company's trade-mark are GUARANTEED. A new Turquoise will be given without question to replace any that discolors. The leading Jewelers of the World sell AZTEC TURQUOISES.

THE AZTEC TURQUOISE COMPANY,

12-16 JOHN STREET, NEW YORK.

Philadelphia.

John Oberholtzer, with J. B. Bechtel & Co., is spending a vacation at Atlantic City.

Wm. Long, 1619 South St., started last week on a vacation trip to the White Mountains.

Bernard Harburger, of Harburger Bros., has returned from a month's trip through Europe.

Emil Bracher, 929 Chestnut St., returned last week from an extended trip through New York State.

Gus. Dorn, 834 Market St., Camden, is spending midsummer with his family in New York State.

A. Hoppis, watchmaker, with Walter Engle, 4233 Lancaster Ave., is spending a vacation at Atlantic City.

Dan Douglas, representing the William C. Penfold Co., recently returned home from a six months' trip in the south and west.

George A. Bowen, of the firm of T. H. Bowen & Co., Bridgeton, N. J., stopped off in Philadelphia last week on his way home from a pleasure trip to Boston.

Paul J. Kugler, watchmaker for John Lang, Atlantic City, but formerly of this city's trade, is receiving the congratulations of friends in the trade upon his marriage last week.

Edward Williams, head of the goldsmithing department of M. Sickles & Sons, charged Abraham Lawrence, one of the employes, last week, with the theft of gold clippings worth about \$500. Lawrence was arrested and held in \$600 bail for trial. It is not believed that any other employee have been guilty of peculations.

A card was brought back to the trade of this city by a tourist of Canada last week and exhibited as a novelty. It was that of F. Clarke & Son, Warkworth and Stirling, Ontario, who style themselves "watchmakers, jewelers and opticians. Issuers of marriage licenses." Just how the firm happens to get in the marrying business is what puzzles the trade here.

Wm. H. Dawson, for many years with Maiden Lane houses, has accepted the position as salesman and stock clerk for M. Sickles & Sons. Mr. Dawson is reputed by years of experience to be especially experienced as a stock clerk. The position he occupies now with M. Sickles & Sons is a new one, made to facilitate the constantly increasing business of this firm.

Frank Thoman, formerly a Camden retailer, a brother of Horace Thoman, of Woodbury, N. J., and a well-known watchmaker, is receiving the condolences of the trade upon the death last week of his wife. He had taken her to California, but was forced to bring her east again. Mr. Thoman is now at Glassboro, N. J., but expects to re-engage soon in business in this city or Camden.

Max Polak, of M. Sickles & Sons, has been advanced to the position of traveling salesman, and will hereafter represent the firm in New Jersey, Delaware, Maryland and West Virginia. Mr. Polak will call on the trade, beginning Aug. 1. Walter S. Davis, city salesman for M. Sickles & Sons, is spending vacation days at Cape May. Nat. Kinckiner is at Kimberton, Pa., with his family, and James McMillan is away.

News Gleanings.

S. A. St. Cyr, Clinton, Ia., moved recently to Peterson, Ia.

J. M. Dunn, Elizabethton, Tenn., has gone to Jonesboro, Tenn.

Staples & Selner, Fosston, Minn., have dissolved partnership.

Charles E. Barker, formerly of Peterson, Ia., is now at Royal, Ia.

R. W. Wilson has bought out William Strickler, Miller, S. Dak.

O. F. Rohwedder has sold out his jewelry store in Sherburne, Minn.

A. W. & E. J. Hyde, Gowanda, N. Y., have been succeeded by C. D. Barnes.

Wm. L. Kitchell, Hempstead, N. Y., has given a bill of sale to his mother.

Mrs. C. H. Lickford, Winona, Miss., has been succeeded by N. W. Lickford.

Smith & Ward, Greenfield, Ind., have dissolved, J. Henry Smith continuing.

N. W. Frantz has purchased the business of Mogle & Means, Winfield, Kans.

The stock of Charles E. Fullwood, Galeton, Pa., will be sold by the sheriff.

S. M. St. John, Calhoun, Ga., moved recently to Dallas, in the same State.

Mr. Shorcy has retired from the jewelry firm of Reuch & Shorey, Glendora, Cal.

E. M. Nelson's store in Williston, N. Dak., was robbed of \$300 worth of goods.

Elmer Hartman, Bowbells, N. Dak., is erecting a building for his jewelry business.

Rudisill Bros., Altoona, Pa., have dissolved, W. W. Rudisill continuing as heretofore.

J. F. Kenly, Caldwell, Idaho, has sold out his interest, at that place, to Charles A. Green.

Harris & Esterly, Duluth, Minn., have dissolved partnership, E. E. Esterly succeeding.

Evington & Wilson have succeeded to the jewelry business of G. L. Evington, Lebanon, Mo.

Ristrom & Erickson, Braham, Minn., have dissolved, S. E. Erickson continuing the business.

The Ontario Silverware Co., Muncie, Ind., will close down for a short time in August for repairs.

W. J. Starks now has his jewelry repair business in the Post Office building at Ellijay, Ga.

Staats, Raynes & Adams have succeeded to the business of Charles Whitcomb & Co., Clinton, Ind.

Charles G. Kay, father of Charles B. Kay, of Charles L. Crawford & Co., Peoria, Ill., died last week.

Sassowsky & Amadee have purchased the business of the LaFourche Jewelry Co. in Thibodeaux, La.

Mr. Renkle, with W. G. Wood, Swainsboro, Ga., has moved his family from Atlanta to that city.

M. H. Borden, Cookeville, Tenn., has admitted a partner, and the firm style will be Dodson & Borden.

J. W. Kegrice, Ida Grove, Ia., has gone to Canada to look over the country with a view to buying land.

Ciley's drug store in Mediapolis, Ia., was recently entered and a number of watches were stolen.

Lindenberg & Fox, Cincinnati, O., expect to have their new catalogue ready to mail the trade about Aug. 1.

The business conducted by Charles L. Taylor, Camilla, Ga., has been incorporated as the City Jewelry Store.

Walter Luhrsen has sold his jewelry business at Laona, Wis., and has bought a stock in Red Lodge, Mont.

M. Greenwald, Tuscon, Ariz., has admitted Mr. Adams into the business under the style of Greenwald & Adams.

E. H. Wanamaker's new store at 723 Hamilton St., Allentown, Pa., will be ready for occupancy in a few days.

Philip Diels has fitted up rooms at 4th and Adams Sts., Marion, Ind., where he has installed his stock of jewelry.

Ehrenberg & Wurkheim, Oakland, Cal., have dissolved partnership. The business will be continued by S. Wurkheim.

Frank E. Dumas will carry on the business of Cooper & Dumas, Kewanee, Ind., that firm having dissolved recently.

The firm style of the business formerly conducted by Saunders, Martin & Co., Bonham, Tex., is now Saunders Drug Co.

Watches and chains to the value of \$125 were stolen, one night last week, by burglars from the store of T. A. Shearin, South Hill, Va.

C. F. Godfrey, for a long time manager of the Shoe City Jewelry Co., Brockton, Mass., has resigned and has been succeeded by C. M. Jeffs.

Geo. F. W. Bewig, Selma, Ala., has merged with Schweizer Bros., of the same place, under the style of the Schweizer, Bewig Jewelry Co., Inc.

George Wooley, Carthage, N. Y., has lost his false teeth, and thinks that he has swallowed them, but an X-ray examination fails to reveal them.

A hearing will be given, August 4, in the United States District Court, Texarkana, Ark., on a motion to grant to George A. Wheeler a discharge in bankruptcy.

A valuable collection of aquamarines, the property of S. H. C. Renolds, is being exhibited in the show window of the Bangor Jewelry & Optical Co., 71 Main St., Bangor, Me.

The August Bruder Co. was recently incorporated to carry on the business of August Bruder, Fort Wayne, Ind., with an authorized capital stock of \$40,000, all paid in.

H. Bealmear & Co. have leased the building at 25 W. Baltimore St., Baltimore, Md., now occupied as a ticket office by the Western Maryland Railroad Co., and will conduct a jewelry establishment.

Frank Stannard, who for the past five years has been employed by the Geneva Optical Co., Geneva, N. Y., left last week for Omaha, Nebr., where he has accepted a position with the Columbia Co., of that city.

Wm. H. Lewis, who for years conducted a jewelry store at River St., near Broadway, Albany, N. Y., died recently at his home in that city in his 63d year. He was a native of New York City. Four sons and a daughter survive.

J. H. Sohn, Ocean Park, Cal., has bought the jewelry and optical business of G. L. Webber, Pier Ave., and has taken charge of the establishment. Mr. Webber will remain with Mr. Sohn and devote his entire time to the optical department.

At Northboro, Mass., last week, Sumner

Goddard, a retired jeweler, died at the home of Mrs. Walter Brigham. Mr. Goddard was born in Boston, Feb. 18, 1826, and was educated in that place. He had lived in Ashland, Keene, N. H., and Worcester.

At Gloversville, N. Y., a man living over the A. D. Norton Co.'s store, recently attempted suicide by setting fire to his bed clothing, after saturating nearly everything in the room with kerosene oil. The blaze was extinguished before the flames reached the store.

J. C. Mellichamp is to open his finely equipped new store at 70 Whitehall St., Atlanta, Ga., Aug. 15. Mr. Mellichamp has recently returned to Atlanta after a visit to New York, where he bought stock. The store has been thoroughly renovated and refitted in an attractive manner.

At the annual meeting of the stockholders of the Middletown Silver Co., Middletown, Conn., these directors for next year were elected: Charles Fountain, Joseph Merriam, F. L. Sage and Eddie S. Davis, Middletown, and Minn S. Cornell, Brooklyn, N. Y. The old board of officers were re-elected.

Conforming to the rigid laws of Massachusetts, the jewelers' association of that State has filed a report with the Secretary of the Commonwealth, saying that during the last session of the Legislature its official agent at the State house was the law firm of Sughrue & Chase, serving without salary.

In Ira N. Clawson's jewelry store, Watkins, N. Y., a man giving his name as A. A. Hurd, of Montour Falls, last Wednesday told a hard luck story and pawned his watch and chain for \$2. A short time afterward, the jeweler says, the man returned, and, claiming that he had the \$2 to redeem the timepiece, grabbed it from the jeweler, who caused the man's arrest.

Mrs. Rebecca Small, wife of Moses Small, jeweler, at 510 Exchange St., Geneva, N. Y., died Saturday at the family home, 12 Elmwood Ave. Mrs. Small was 38 years of age, and had been ill only a few days of diabetes. Mr. and Mrs. Small moved to this city about four years ago from Waterloo, where Mr. Small was formerly engaged in the jewelry business. The funeral took place Monday from her mother's home in Syracuse.

At Asheville, N. C., the large plate glass show window in Mrs. M. Alexander's store was broken last Sunday morning by thieves, who took a number of articles. The store is on a principal business street, and in a glare of electric lights. The glass was broken with a brick, which was found inside, and the thief, reaching in his arm, took everything he could grab. The hole in the glass is about the size of a small watermelon.

After carving through a panel in the rear door of the Sarbach Jewelry Co.'s store, 231 N. 9th St., Lincoln, Nebr., burglars made a thorough search of the premises. When Mr. Sarbach and his assistants opened the store next morning they found that 47 dozen rings had been taken, in addition to studs, watch fobs and jeweled combs. The burglars did not succeed in finding the more costly jewelry. The loss will exceed \$200. The safe was opened and papers scattered about.

AMETHYSTS

THE POPULARITY OF THIS BEAUTIFUL VARIETY OF THE

TRADE-MARKS

OF THE JEWELRY AND KINDRED TRADES.
Over 4,000 Marks. Second Edition. Price, \$3.00.
The Jewelers' Circular Pub. Co., 11 John St., N. Y.

Buffalo, N. Y.

J. H. Ullenbruch, with his wife, goes to Detroit next week for a visit with relatives.

Frank Harns, in charge of Meyer Brown's watchmaking department at 136 Seneca St., is ill at his home.

J. Ansteth, of the Mooney-Brisbane building, and wife are enjoying a vacation trip to Albany, Troy and Cohoes.

W. W. Berry, for two years in charge of the optical department in C. F. Chouffet's jewelry store, 379 Main St., has located in Escanoba, Mich., where he is manager of an optical store.

Robert Ritter's jewelry store at 857 Seneca St. was damaged to the amount of \$2,500 by fire last Thursday afternoon. An overheated gas stove in the rear of the store ignited the woodwork. The loss is fully covered by insurance. Mr. Ritter's loss was wholly on stock.

T. C. Tanke, whose store is at Main and Eagle Sts., is on his way to Holland. He will go from Holland to Germany, which he will tour, and then go to England by way of France, returning to America in the middle of September. His son, Eugene Tanke, came home in May from an extended trip to the Holy Land. Charles Beer, for many years with Mr. Tanke's retail store, is in New York for his vacation.

Jireh Kinney, a pioneer jeweler, now at 92 Seneca St., whose home is in East Aurora, is most anxious concerning the condition and fate of his son Paul, aged 17 years. On the evening of July 9 Paul Kinney was found in a public highway a mile from his home in an insensible condition. By his side was his bicycle, the front forks of which were broken. The young man has been unconscious continuously since he was found, being asleep most of the time. Specialists from Buffalo say the young man's skull is not fractured, and they regard his condition as being most unusual. They believe, however, that in time the young man will fully recover.

Walter M. Wilson, one of the leading pawnbrokers of this city, doing business at 327 Main St., was thrown from an automobile on the Williamsville road Friday afternoon and killed. His brains were dashed out by his head striking against a pile of railway ties. Mrs. Wilson, who was also thrown from the automobile, landed in a cornfield, 100 feet from the point where the machine struck a telephone post. One of her legs was broken, she was badly bruised, and it is feared she sustained grave internal injuries. She was not informed of her husband's death until yesterday. At her request the body of Mr. Wilson will be incinerated in this city. Mr. Wilson was 38 years old, and he was one of the most popular young men of the city. The funeral was held Monday afternoon.

An addition is being made to Chas. E. Gifford & Co.'s store, Fall River, Mass. A two-story brick structure 29 x 30 feet in square dimensions will be constructed at the back of the present store. The addition is to be handsomely finished, and both floors are to be used for the display of stock. An elevator will be one of the improvements.

Connecticut

The New Haven Clock Co., New Haven, resumed work at its factory last week.

Auxiliary fire alarm boxes are to be installed by the International Silver Co. in its Meriden plants.

Richard Walkley, for many years employed at the International Silver Co.'s factory, Shelton, died last week.

Hon. E. B. Dunbar and Walter A. Ingraham have just been re-elected vice-presidents of the Bristol Savings Bank.

Chris. Waremer was, last week, elected president of the Swiss Dial Co., Waterbury. Leon Schupbach is treasurer and Olga Wuest, secretary.

Albert T. Hill, employed in the casting department at E. Miller & Co.'s factory, Meriden, was knocked down by a bicycle scorchler last Thursday evening, and severely bruised.

William J. Smith and Samuel Hume, foremen at Landers, Frary & Clark's factory, New Britain, have returned from a trip abroad. They traveled in England, France and Italy.

George D. Munson and Chas. D. Morris have been elected members of the finance committee of the Dime Savings Bank of Wallingford. Mr. Morris is also a member of the bank's loaning committee.

Arthur E. Hobson, superintendent of the Barbour Silver Co.'s factory, Meriden, returned on Saturday on the steamship *Campania* after a five weeks' business and pleasure tour of Europe. This was his 14th trip to Europe.

R. S. Gardner, of the Gardner & Hall Co., and family, Derby, are spending the last two weeks of July on Block Island. Mrs. S. W. Hall, of Derby, with her two daughters, has gone to Cape Cod for July and part of August.

Two handsome sterling silver cups have been presented by C. H. Leonard, jeweler, Winsted, to the Greenwood Country Golf Club. The cups will be awarded to the winners of gentlemen's and ladies' tournaments to be played probably in September.

Albert Seilinger, an employe in the factory of the C. F. Monroe Co., Meriden, has brought suit for \$100 damages against James Zuellt, who was formerly employed in the same factory. The plaintiff was stabbed by the defendant last March, it is claimed, and was incapacitated for some time from working.

A writ in replevin was obtained last week against Emil Mendil, 77 Broadway, New Haven, in an action brought against him by the Moline Jewelry Co., Iowa City, Ia., to recover \$200 claimed to be due as the purchase price on a sale of merchandise. The suit is returnable to the City Court to-morrow in the City Court.

According to the certificate of incorporation of the Munson Co., Hartford, filed last week, it is to deal in silverware in addition to various other lines. The amount of capital stock authorized is \$50,000, and it is to start business with \$10,000. The incorporators are E. H. Warner, F. H. Williams, Jr., and C. E. Ripley, all of Hartford.

Twenty-five young women clerks are reported in a sensational story sent out to a New York paper to be implicated in the systematic robbery of a department store in

Waterbury. It was said in the report that they took cut glass, jewelry and other articles, and that one of the girls, about to be married, had collected a most comprehensive and handsome trousseau.

N. Schneider, Meriden, one of the old employes at the International Silver Co.'s main factory, sailed, last Thursday, on the *Kaiserin Auguste Victoria*, for a trip to Germany. Wm. Fitzgerald, employed in Factory H, Meriden, has been elected vice-president of the Central Labor Union of Meriden. Joseph D. Wright, employed at the office of factory E, Meriden, will sail with his brother, Robert Wright, of Yonkers, N. Y., on the *Germania*, July 31, for Europe.

After being in business for 29 years in Stamford, Clasen W. Hoyt, last week, sold out to Frederick W. Karsch, of New York. For some time Mr. Hoyt has been desirous of enjoying a period of rest and he took advantage of an opportunity to sell his store to a personal friend of long standing. Mr. Karsch is being introduced to Mr. Hoyt's trade as a practical watchmaker and jeweler. The new comer is to make a specialty of an optical department, and at the same time to keep the jewelry lines up to a high standard.

The Brainard & Wilson Co., manufacturers of silver plated novelties, last week, began operations in its new plant on Thorpe St., in Danbury, having abandoned its cramped quarters on Montgomery St. The main building of the new plant is a brick structure, 32 by 144 ft., two stories high. The factory has two wings, one of which, the casting room, is 28 by 40 ft., and the other, the plating room, is 32 by 56 ft. The engine house is 24 by 26 ft. The new plant will enable the company greatly to increase its output, and its force of employes will be materially augmented.

North Attleboro.

Frank M. Whiting & Co. and F. S. Gilbert closed on Saturday until Aug. 6.

An accident to a blower compelled the George L. Paine Co. to close Friday of last week.

Frank Kennedy, New York representative of the Paye & Baker Mfg. Co., and William B. Peckham, of J. H. Peckham & Co., were at the factory this week.

Work commenced this week on the addition 40 by 28 which is to be added to the Riley & French building for the convenience of C. Ray Randall & Co. The addition must be complete in four weeks.

Owing to the great increase in business during the past year, R. Blackinton & Co. have been obliged to secure additional rooms. Consequently the owners of the Whiting factory wherein they are located have given out the contract for an addition 36 by 48 feet on the south side. The extra floor space will be utilized by the engravers and die cutters and part of it by the packing room help. The contract calls for the work to be done within a month.

The promoters of the new manufacturers' jewelry factory that will be erected on Elm St. have practically come to an agreement upon the plans and the figures of the contractors. The contract is expected to be given out within a few days and actual

building will start immediately. The building, it is announced, will be a three-story brick structure of mill construction and will have approximately 35,000 square feet of floor space. It will be shaped like a letter L, and will be built of red brick, and will have a grass course of granite around the entire building. It is anticipated that the H. D. Merritt Co., W. G. Clark & Co., estate of O. M. Draper, E. I. Franklin & Co., and the Bugbee & Niles Co. will engage space in the building.

Attleboro.

The Bliss Bros. Co. will close its factory July 28 for two weeks.

Fred W. Lincoln, of J. M. Fisher & Co., is spending his vacation at Capitol Island, Me.

Maxy W. Potter, with J. M. Fisher & Co., back from five weeks in the central west, is more than ever sanguine that this will be the banner year in the jewelry trade.

James E. Blake, of the James E. Blake Co., last week voluntarily gave the town a long strip of land to widen and benefit the appearance of one of the central business streets.

Official announcement was made last week that the annual shut-down of two weeks in the large group of jewelry factories owned by Charles H. and William C. Tappan, will not take place. In past years, when these were the property of Joseph M. Bates, this was a custom which enforced a vacation on a score of firms and over 1,000 workers. Additions to the power facilities and the great rush of work at this time caused a suspension of the practice.

Charles M. Robbins of the Chas. M. Robbins Co., lost his wife last week, Mrs. Robbins yielding to a long illness. Among those to whom the family was personally known, Mr. Robbins is the object of deep and sincere sympathy in his loss owing to the general recognition of the deceased's sterling qualities. In jewelry and other business circles Mr. Robbins has the sympathy of associates and acquaintances. At the funeral the employes of the company sent a handsome floral tribute. The bearers included David E. Makepeace, of the D. E. Makepeace Co.; Willard Rounseville, Frank Mossberg, of the Frank Mossberg Co.; John M. Fisher, of J. M. Fisher & Co., and Edward P. Clafin, formerly of Fontneau & Cook.

The various rating and reports of the Jewelers Board of Trade, including the confidential weekly sheet, are a subject of much favorable comment on the part of the members who write from time to time expressing their appreciation of the work. In a letter received by the Board last week the Towle Mfg. Co., Newburyport, Mass., says: "It is a constant surprise to us to note how perfect and complete are the ratings of the Board of Trade. There is not anything that depends upon the human mind that is absolutely perfect; we all make slips and omissions and errors, but there are so few in the Board of Trade and the general range of the ratings is so good and so near correct that to the writer it is an ideal commercial agency."

GORHAM SILVER

BEAUTY, ORIGINALITY AND FITNESS

¶ In no direction is Gorham proficiency in design and dexterity in fashioning more prominently displayed than in the Cups, Vases and Trophies which have this season been prepared as prizes for summer sports and pastimes.

¶ From the simplest of cups to the most elaborate of emblematical special pieces, they bear alike the stamp of originality and significant fitness for their purpose.

¶ Individuality and exclusiveness, qualities so insistently desired by the average prize committee, are characteristic in a marked degree of these, as of all other Gorham productions.

OWING to the greatly increased size of THE JEWELERS' CIRCULAR-WEEKLY, it is absolutely necessary that all changes in advertisements be received one week in advance of date of publication if proof is desired. Positively no change can be made after Friday noon for the next Wednesday's issue.

Stock Swindles in THE continued increase in the price of diamonds during the past few years coincident with the great increase in the supply of gem stones, and the increase in the demand for them in the American market, has produced a condition so unusual as to attract the attention of promoters and investors outside of the jewelry trade. With the fact dawning upon the financial and commercial world that even the natural monopoly of the De Beers Consolidated Mines, Ltd., does not give the company the opportunity to supply all the gems that could be used, the search for diamond fields in other sections of the world besides South Africa goes on with renewed interest and vigor. Everything in the way of a discovery that might in any way, even remotely, lead to the location of a diamond field is heralded abroad in the papers of the world and is read with avidity by people in all countries. Naturally, therefore, the stock jobber and promoter, ever ready to organize in lines which have public attention, has seen in the great publicity given to the diamond situation an opportunity not to be lost, and he is not losing it.

While some attempts have been made without success to organize mining companies for developing properties in regions where alleged discoveries of gems have been made, the shrewder promoters have taken up the old diamond fields in Brazil where diamonds to some extent are still found, as the section in which to locate the companies whose stock they wish to unload upon the public. Their chances of success have been increased by the fact that some legitimate companies are operating in Brazil, though not very successfully as far as authentic reports go. Even members of the jewelry trade have been solicited to take stock in these, and to them we call attention to the note of warning sent from Rio de Janeiro, Brazil, by Consul Geo. L. Anderson, whose report is published in another column of this issue.

In effect Consul Anderson says that although there is much gold and a good many diamonds in the country, and while there are some mines that are being worked by reputable companies and in perfect good faith, there are a vast number of wild-cat speculations that are being floated in London, New York and Chicago that are frauds of the worst sort. He says that the land titles are bad, and if a company buys

ground for a mine it is likely to buy a lawsuit along with it. The diamond mines, he says, are of a totally different character from the well understood mines of South Africa, being in small pockets scattered over a vast extent of territory, and it not only takes expensive machinery to work them, but when one pocket is worked out it is an expensive matter to prospect for a new location and move the machinery. He says the consulate is constantly in receipt of all sorts of letters showing that the very promoters of the companies know little about the country that they are dealing in, and he advises investors to be very careful about putting their money into enterprises with which they are not perfectly familiar.

The report of Consul Anderson was brought forth, owing to the number of inquiries received at the Consulate-General from all over the world.

Many Jewelry Rob- **D**ESPITE the fact that this is generally considered the dull season of the year with jewelers, and one in which the thieves are not usually active because the merchant and his clerks have plenty of time to watch every transaction of suspected customers, nevertheless an unusual number of jewelry robberies are reported in many sections of the country. In addition to the jewelry robberies in Cleveland recently noted in these columns, two more are reported this week, while others, which showed both cleverness and daring on the part of the thieves, occurred in Manhattan, New York, and Utica, N. Y., not to speak of many smaller robberies and attempts at robbery in other parts of the country. From Chicago comes the news of an unsuccessful attempt to hold up a small jeweler, an unusual feature of the news being the report that the would-be thieves had been captured, having been held at bay at the point of the revolver by the jeweler until the police arrived.

Altogether the news of the past few weeks should make jewelers more than usually cautious and impress upon them the fact that at no season of the year are they immune from the operations of the cleverest of crooks. This point cannot be too strongly impressed upon clerks and other employees.

William I. How moved recently from Pont-terville, Mich., to Lansing, Mich.

Trans-Atlantic Voyagers.

TO EUROPE.

Elof Benson, Youngstown, O., sailed this week on the *Scandinavia*.

A. Frankfield, of A. Frankfield & Co., sailed recently on the *Umbria*.

FROM EUROPE.

M. C. Eppenstein, Chicago, sailed from Europe on the 17th on the *Koenigin Luise*.

B. Harburger, of Harburger Bros., Philadelphia, returned last week from a month's pleasure trip to Europe.

Charles L. Power, of Charles L. Power & Co., New York, and Mrs. Power, returned yesterday on the *Vaderland*.

Nelson Anderson, retailer, Schenectady, N. Y., who was formerly located at 619½ State St., has purchased the jewelry business of E. F. Barnes at 465 State St. and will hereafter be located at that place, having moved his entire stock from the old stand.

Col. W. A. Moore, vice-president of the North American Watch Co., Mansfield, O., has leased his handsome residence in Warwick, R. I., to Dean Lawrence, of the Wire Sewing Co., East Greenwich, retaining his old homestead in the latter village for his family and week-end visits from New York.

New York Notes.

Herman Alexander, 1812 Amsterdam Ave., has recently renewed the lease of his store.

Maurice Brower, 12 John St., left last week for a 10 days' trip to the pearl fisheries of the Wabash River.

Sam Hoehhaus, who started recently as an importer of diamonds, is now settled in his new quarters at 71 Nassau St.

Chas. L. Power, of Chas. L. Power & Co., accompanied by Mrs. Power, arrived from Europe yesterday on the *Vaderland*.

Alfred Stevens, western representative of Enos Richardson & Co., 21 Maiden Lane, is in the country recovering from illness.

A. Frankfeld, of A. Frankfeld & Co., sailed recently on the *Umbria* for Europe, intending to return by the end of August.

G. Marcus, of the California Jewelry Co., San Francisco and New York, is now in Amsterdam in charge of the company's European office.

Mr. and Mrs. William M. Dachtera, of Dachtera Bros., opticians, are now at the Rip Van Winkle Hotel, Pine Hill, in the Catskill Mountains.

Leo Cahn, formerly a clerk in the employ of Jacob Strauss & Sons, left Monday on his first trip as a salesman for Meyerowitz Bros., 37 Maiden Lane.

It is reported that a man who has been for some time connected with Abraham & Straus, Brooklyn, is about to establish a factory in Sidney, N. Y.

Robert Dieges, the 14-year-old son of Charles J. Dieges, of Dieges & Clust, 23 John St., saved a girl from drowning while at St. Bartholomew's Camp at City Island last week.

Abraham A. Heller, of L. Heller & Son, 51 Maiden Lane, who has been in Europe for three months, in charge of the Paris branch of the concern, is to remain permanently at that point, it is announced.

Harry Levinson, the salesman who was arrested in this city on the charge of stealing his samples from his employer, Louis Sonnanbend, 15 Elm St., Boston, Mass., was last week taken back to that city.

Under the new Brazilian tariff, according to an announcement sent out from Washington, the impost duty on a number of lines of merchandise, including watches, which that country buys from the United States is reduced 20 per cent.

Wm. McAdie, with the International Silver Co., 9 Maiden Lane, is advertising for the owner of a ladies' gold watch found June 30 at South Beach, S. I. The repair numbers on the inside of the case are as follows: X 31742 P—13757 X—E 255212—2380.

The firm of Louis L. Grey & Co. was dissolved yesterday by mutual consent. Louis L. Grey, who assumed all liabilities, will continue business at 71 Nassau St. Under the style of L. & B. Lehr, a manufacturing business will be conducted at 49 Maiden Lane by Louis and Benjamin Lehr, the former having retired from Louis L. Grey & Co.

The private offices of Joseph Fahys & Co. have been moved from the eighth floor front of the Fahys building, 54 Maiden Lane, to the third floor front. L. W. Rubenstein, who formerly occupied the third

floor front, has moved to the rooms on the eighth floor front. Other offices of Joseph Fahys & Co., now on the eighth floor, will later be moved to the fourth floor front.

George H. Robertson, former vice-president of the Gorham Mfg. Co., heads the directors' ticket recently put in the field by dissatisfied stockholders of the Wells-Fargo Express Co., who are making a demand for a larger distribution of earnings. Friends of the present management say that the object of the movement is not so much to obtain larger dividends as to get control of the business.

Oscar Wilhelm and Alexander Beck, for many years with F. Schneider, 68 and 68½ Bowery, New York, have formed a partnership and will continue the jewelry and optical business heretofore conducted by W. J. Roberts at 1576 Fulton St., Brooklyn. Both are members of the New York Watchmakers' Society, Mr. Beck also being a member of the Optical Society of the City of New York. The firm will be known as Wilhelm & Beck.

G. L. Sloan, the manager of the London branch of the L. E. Waterman Co., is now in this country. Frank D. Waterman, president of the company, entertained Mr. Sloan in New York last week. J. B. Tukey, representing the company, is about to start for Kansas to take orders for the Fall. Other salesmen are in their territories, W. J. Chaplin now visiting the trade in Washington, Baltimore and Philadelphia, and C. A. Crist making a trip through New York State.

Samuel Heller, of L. Heller & Son, 51 Maiden Lane, was among those present at the meeting called last week by Upton Sinclair for the purpose of establishing a co-operative settlement near New York. One of the daily papers reported Mr. Heller as casting his lot with the new company, and saying that as a business man the project looked to him entirely practicable. To a representative of THE CIRCULAR-WEEKLY Mr. Heller said that while he had sufficient interest in the movement to attend the meeting, yet he had not expressed the sentiments attributed to him.

Creditors of the I. G. Dillon & Son Co., Wheeling, W. Va., are quite generally signing the acceptance of an offer of 40 per cent. to be paid in cash. A meeting of the creditors was held one day last week in the rooms of the Jewelers Board of Trade, New York, at which the offer was made as a composition in bankruptcy. The committee of creditors who have been investigating the company's affairs recommended an acceptance of the proposal, and those who were present, representing almost a majority in the amount of indebtedness, unanimously voted to accept.

An offer of 40 cents on the dollar, made by Simon Robinson, who had stores at 1283 Broadway, Manhattan, and 1029 Broadway, Brooklyn, has been accepted in the last week by a number of his creditors, and there is said to be a likelihood that a composition will be formally effected on this basis. The creditors filed a petition in bankruptcy several weeks ago. Mr. Robinson then offered 25 per cent., and subsequently increased this offer to 33½ per cent. The creditors quite generally rejected both offers, and at a meeting a resolution was adopted suggesting

that he pay 40 per cent. At first he did not seem prepared to do this, but after consideration he accepted the terms which were proposed.

Henry Steck, 365 E. 61st St., New York, who had been employed by the L. E. Waterman Co., was recently arrested and is now held in \$1,500 bail to await the action of the grand jury, on the charge of grand larceny. Recently Harry Stafford was arrested in Coney Island as he was selling Waterman fountain pens at \$1 each. The company recovered more than \$100 worth of stolen pens from several stores on the Bowery. In nearly every case the articles were traced back to Steck, it is said. Steck, it is alleged, by means of a skeleton key, opened the vault where the stock is deposited, and helped himself to pens. The losses were at once noticed by the officers of the company. After investigation they concluded that Steck was the thief. His method, it is said, was to distribute the goods to others, who sold some of the highest priced pens at a low figure.

Beginning Aug. 13 and continuing until Aug. 18, Powers & Mayer will give an exhibition of mounted diamond stock in their salesrooms, 258-260 Fifth Ave. Their invitations have been answered by jewelers from various parts of the country who will attend and also by some South American merchants. The exhibit will include many new and original designs executed as hair ornaments, collars, necklaces, bracelets, brooches, rings, etc. Exhibitions of this kind are given annually by Powers & Mayer and the coming one will be the fourth. It has taken seven months to complete the articles that are to appear in the exhibit. Mr. Mayer said that displays of this kind, where buyers may see a greater variety of goods than in any other way, are growing more popular. "The number of jewelers," he said, "who signified their intention to be present at the coming exhibit exceeds that of any other year."

In the suit of J. Finkel, of Locketz & Finkel, jewelry manufacturers at 218 E. Houston St., against the Brooklyn Watch Chain Co., 275 Bowery, the trial took place recently in the Municipal Court, Seventh District, Brooklyn. The action is to recover \$45, the purchase price of a number of slides. The defense is that the slides did not come up to the guarantee of 14 karat gold. The testimony of assayers was heard and considerable time was consumed in the examination of witnesses, who were required to explain methods of testing and assaying. The court reserved decision. Sol. L. Youngentob, counsel for the plaintiff in this suit, recently began another action against Maurice J. Blumen and J. Jacoves, of the Brooklyn Watch Chain Co., for \$10,000 damages for alleged malicious prosecution. This case, like the other, grows out of the sale of the slides. After the sale the watch chain people summoned Mr. Finkel to the Essex Market Court, charging him with a violation of the New York Gold Stamping law. It was claimed by the Messrs. Blumen and Jacoves that the gold in the slides assayed less than 13 karats in fineness. That complaint was dismissed by Magistrate Finn. Thereafter another summons was obtained

New York Notes.

(Continued from page 61.)

against Mr. Finkel in an effort of the watch chain people to reopen that case, and in this they were unsuccessful.

Creditors of David Hartstein, 4 Ave. C, have accepted the composition of 40 cents on the dollar which he offered recently, and he will continue the business.

The S. Kaplan Co. has been incorporated to deal in jewelry with a capital of \$25,000. Incorporators are: A. Bamday, S. Kaplan and D. W. Peters, all of New York.

Claudius Miller, 58 years of age, a silversmith, employed at Tiffany & Co.'s works, near Forest Hill, Newark, was struck and instantly killed Monday by a train on the Greenwood Lake Division of the Erie Railroad, near Forest Hill, Monday. The victim was on his way to work at the time, and did not see the train.

Attorneys for Joseph and Morris Klein, of Klein Bros. & Co., bankrupt manufacturers at 51 Maiden Lane, last Friday, obtained from Judge Rosalsky an order reducing their bail to \$6,000 for Joseph and \$4,000 for Morris. The amounts originally fixed were \$15,000 and \$10,000 respectively, and the Kleins, being unable to furnish a bond in that amount, had been detained in the Tombs. They obtained bonds for \$10,000 as soon as the court consented to the reduced bail, and received their freedom. They are to appear for trial about the middle of August, it is expected.

Newark.

A new corporation was formed last week under the style of Kollmar, Rauch & Co., to manufacture jewelry. The incorporators are Robert and Henry Kollmar and Julius C. Rauch, all of Newark. Robert Kollmar was formerly in business here. The authorized capital is \$100,000, of which \$20,000 is paid in, according to the certificate.

Leiman Bros., of 139 Centre St., manufacturers of jewelers' machinery, are to erect a factory in Brill St., to cost about \$10,000. The plans as drawn by T. Cecil Hughes call for a two-story reinforced concrete building, to cover an area of 46 x 85 feet. The Joseph Sharpe Construction Co., of Paterson, will do the masonry, and John W. Vliet the carpentering.

Albert E. Lee, western representative of Robert Levy, manufacturer at Green and Columbia Sts., has recently formed a partnership under the name of Lee & Wheeler. The new firm has opened an office in San Francisco, where it will represent Mr. Levy and other manufacturers. Joseph Levy, traveler for Robert Levy, recently passed a brief vacation in Bradford, Pa., visiting his mother.

The Wheeler Jewelry Co. was incorporated last week to carry on the business conducted up to this time by a partnership under the same style at 24 Boudinot St. The certificate of incorporation authorizes the company to manufacture gold-mounted combs and other novelties. The amount of capital stock is \$15,000; incorporators, Ar-

thur L. Phillips, South Orange, N. J.; Frank Mead and Richard F. Faux, Newark, N. J.

An extension, to cost about \$12,000, is to be made to the plant of the Newark Watch Case Material Co., at 17 and 19 Ward St. The structure will be a three-story brick addition, to measure 45 x 60 feet. The new building will be equipped with a freight elevator. Contracts for the mason and carpenter work have been awarded to William B. Gordon and Edward I. Oakley, respectively. Richard W. Erler drew the plans.

Burglars broke into William Carslake's store at Church St., in Bordentown, on the night of July 16, and rifled the cash register of \$65 in money, besides carrying away a quantity of ladies' and men's gold watches and chains, finger rings, cuff buttons and other jewelry to the value of \$35. Entrance was obtained through a window leading to the cellar, and thence through a door leading into the store. A young man about 20 years of age, who was seen loitering in the vicinity of the store, is suspected.

An article descriptive of the Trenton Watch Co.'s plant at Trenton, N. J., was published in the last issue of the *Weekly Advertiser*, of that city. The writer said that under the direction of John M. Cutter the company is making steady progress, 400 persons being now employed in the factory, about one-half being women and girls. The output is given as 500 watch movements per day, and it is said that the orders ahead are sufficient to assure steady work for a year. Speaking of the character of the employees, he says: "The employees are sober, industrious, ingenious craftsmen, good citizens as can be found anywhere. Germans and Frenchmen are to be found in the place as well as a few Swiss, but the majority are native born, though they may have in many cases parents who were born under a different flag than the Stars and Stripes of their adoption."

Optical Notes and Briefs.

Spence's Optical Co. has opened at 1020 Fillmore St., San Francisco, with a full line of goods.

The Sunset Photo Co., of 43 Third St., San Francisco, has opened on Van Ness Ave., near Geary St., and have added an optical department.

Dr. Holzberg, formerly located at 877 Market St., San Francisco, will soon open on Van Ness Ave., near Turk St., with a full line of optical goods.

A patent for a safety hook for eyeglasses was recently granted to Mrs. May C. Horton, wife of State Senator C. H. Horton, Woonsocket, R. I. The hook is designed to prevent glasses from slipping off when the wearer stoops.

Articles of incorporation have been filed by the California Optical Co., Oakland, with a capital stock of \$60,000. The directors are: Henry L. Davis, W. D. Feminore, A. R. Feminore, all of San Francisco; John W. Davis, San Mateo, and Charles L. Hogue, Oakland.

C. H. Gottschalk Sons, who formerly conducted an old-established jewelry business at 507 California St., San Francisco, are now temporarily located at 1636 Post St.

Clocks, Watches, Jewelry and Gems Imported Into Canada.

TORONTO, Can., July 19.—The monthly report of the Canadian Department of Trade and Commerce for April, just issued, shows the value of imports for home consumption in the jewelry and kindred trades as follows:

Warning to the Trade!

Retailers are being called upon by a man who is selling twenty-one chains on a cloth for \$18, with swivels stamped "S. O. B. & Co.," and with a duplicate tag of ours bearing our trade-mark, attached to same. The chains are nothing more or less than brass shaded over, and will not stand acid for a single moment.

Jewelers with any experience ought to be able to discover the difference between a finished article and a rotten one.

Anyone who has been swindled by this man will please notify our house, as we want all the evidence possible, and we will do the rest.

Localities where goods have been disposed of are Pittsburg, Allegheny, McKeesport and surrounding towns.

We have two chains now in our possession that were sold by this man.

S. O. BIGNEY & CO.

We give you below an exact copy of an assay of chains manufactured by the leading chain makers of the United States.

Chicago Notes.

Tom Stanek visited the Twin Lakes of Wisconsin last week.

The Lewis Schaffer Jewelry Co., Madison St., has discontinued business.

Leon Gross, of the Knickerbocker Silver Co., goes on his western trip this week.

Tony Seriewicz is on a visit to the Dueber-Hampden factories at Canton, O.

J. W. Stoneburner is spending his vacation at his native town of Edinburg, Va.

M. C. Eppenstein and wife sailed for the United States, July 17, on the *Koenigen Louise*.

Joe Manheimer and family will return from the Yellowstone National Park about Aug. 1.

Herbert Rosensteal, of B. H. Davis & Co., New York, visited trade here during the week.

Max Mayer, of the Western Watch Case Mfg. Co., is on a trip to Yellowstone National Park.

Ed. Moore has secured the western agency for the American Ring Co., Providence, R. I.

Paul Juergens, of the Juergens & Andersen Co., is spending the Summer at Powers Lake, Wis.

S. Newman and L. Eisenbach, of A. Hirsch & Co., leave shortly on their Fall trips to the west.

S. Buchsbaum, of S. Buchsbaum & Co., is having an outing with his family at Brown's Lake, Wis.

C. A. Wilkinson, of Chas. A. Wilkinson & Co., Providence, R. I., visited the optical trade in Chicago last week.

H. Eyster, of Seattle, visited Chicago trade on his way home from Providence, Attleboro and eastern points.

E. C. Bell has been engaged by A. Max Holzheimer to travel for the Omega Watch Co.'s western selling agency.

Lem Whitney Flershem, of Lapp & Flershem, has been confined to his home for some time with rheumatism.

F. Goodholm and wife, Lindsborg, Kans., who have been spending some time in Chicago, returned home last week.

Chas. Lesser, with the Chicago office of the Wadsworth Watch Case Co., underwent an operation last week for abscess of the jaw.

Charles S. Hungerford, an old-time jewelry salesman, visited Chicago last week. He has been in Southern California for some time.

Joe H. Ehrlich, who recently severed his connection with Goldman Bros., contemplates going into business for himself at Detroit, Mich.

Jos. Brown & Co. have opened a retail jewelry store at 90 State St., on the premises formerly occupied by the Fidelity Trust & Receivers Co.

Will G. Andersen, of the Juergens & Andersen Co., sailed recently on the *New York* from Southampton. Mr. Andersen has been absent about three months buying.

J. T. Brayton, of the Julius King Optical Co., is spending his vacation at his Summer cottage at Lake Kenkenosha, Wis., where his family has been installed for some time.

John H. Mather, western manager of the Geo. H. Fuller & Son Co., has returned from an eastern trip, which included a swordfishing expedition on Mr. Fuller's steam yacht.

William Strickler, Miller, S. Dak., has sold his business at that place to W. H. Wilson. He was in Chicago recently getting together a new stock, and proposes to locate in Idaho.

Victor Paltrovitch, 66 State St., and L. C. Goldsoll, of 134 State St., have opened a new jewelry store next to the northwest corner of State and Van Buren Sts. under the firm name of the Jackson Jewelry Co.

James L. Woolson, a former clerk in the collection department of Loftis Bros. & Co., was charged last week with being short something over \$100 in his accounts. He was apprehended by the Bankers' Surety Co., who had bonded him.

Frank H. Mooney & Co. are increasing the capacity of their factory, which is located in Chicago. The following salesmen of this company left July 15 for the Fall trips: Henry J. Hauk, C. L. Turley, A. L. Sanderson, E. O. Flanders and R. J. Rhodes.

Among the buyers in Chicago during the week were: E. Paegel, Paegel Jewelry Mfg. Co., Minneapolis, Minn.; C. Liebenow, Manitowoc, Wis.; A. H. Frandsen, Monmouth, Ill.; John Armbruster, Cedarburg, Wis.; George C. Schreiber, Lincoln, Ill.; C. E. Axt, Rockford, Ill.; F. L. Taylor, Aurora, Ill.; Theo. Leaf, DeKalb, Ill.; C. Q.

Erismann, Lafayette, Ind.; Henry E. Volkman, Kankakee, Ill.

Alfred Despres, who died July 16 of Bright's disease at his home in Chicago, at the age of 49, was very well known among the jewelry trade in the west, having been connected with the firm of H. F. Hahn & Co. as traveling salesman for 18 years. At his death he was in the wholesale liquor business under the firm name of Despres & Co. Deceased was a brother of Emil Despres, of Despres, Bridges & Noel.

The Illinois State Rifle Association will hold its tournament at Camp Logan, Sept. 15-16. The genial manager of the Julius King Optical Co., J. T. Brayton, with Lieut. Cols. Healy and Barnett, are working for the success of the meet, which is to open to all members of the association and the Illinois National Guard. In all 12 to 18 matches will be held, and a big list of valuable trophies and medals, as well as money prizes, will bring out the crack shots of the two organizations.

On July 5, Edwin C. Day, the receiver for the Cash Buyers' Union of Chicago, filed his report in court and turned over the affairs of that concern to the trustee, Charles L. Billings, who was appointed June 1. Receiver Day's report showed receipts since April of this year of \$109,827.48, with expenditures of \$109,826.15 and bills contracted by him but unpaid of \$5,713.12. The inventory made by order of the receiver shows stock, figured at cost, amounting to \$298,295. Trustee Billings has advertised for bids covering the entire assets, consisting of the stock as inventoried, good will and all the fixtures in the eight-story building occupied by the concern. In court on Thursday he stated that he had received some fair bids, but asked leave of the court until July 26 for further time to negotiate with the parties bidding. He is of the opinion that a satisfactory bid will be made when the affairs of this unfortunate enterprise will be closed. The original schedule of the Cash Buyers' Union shows debts totaling \$337,099.38. This includes office expenses, money received on orders not filled, and the unsecured claims of creditors. The assets aggregate in this schedule \$1,690,183.98, of which sum over a million and a quarter is placed as the value of stock and fixtures, with debts due on open account of \$320,200.

To the Jobbing Trade.

WE HAVE

in quick-selling popular-price Diamond Jewelry and Mountings.

Diamond Bunch Rings a Specialty.

St. Louis.

Al. Cline is now with J. W. Cary & Co. J. C. Wieser, Roodhouse, Ill., is visiting his son-in-law, George F. Longnecker, Winchester, Ill.

H. M. Carle, agent for the Keystone Watch Case Co., Chicago, Ill., was in St. Louis last week.

Mrs. Zeitler, wife of John F. Zeitler, 2013 Salisbury St., and children are making an extended tour of the west.

Joseph J. McKenna, of the Bauman-Massa Jewelry Co., has gone on a fishing trip with J. A. Allison, of Rolla, Mo.

Charles Gonterman, Granite City, Ill., was the chairman of the arrangements committee of an outing given by the merchants of that city.

Among the visiting jewelers in St. Louis last week were the following: J. Harvell, Litchfield, Ill.; Winfield C. Davis, Thayer, Mo.; Fred Simon, Collinsville, Ill.; M. Roberts, Troy, Ill.

L. W. Waldecker, manager and buyer of the silverware department of the F. W. Drosten Jewelry Co., goes Saturday for an extended visit east. He goes from here direct to New York.

Simon Van Raalte left Monday for New York and other eastern resorts. He will sail soon from New York for Europe, and will visit Egypt and other Oriental lands before going to join Mrs. Van Raalte in Holland, where she is visiting.

The Mermod, Jaccard & King Jewelry Co. displayed in their window last week cups, trophies and medals to the value of more than \$2,000, which were contested for in the regatta of the Southwestern Rowing Association at Creve Coeur Lake. Besides two cups, 38 medals of the value of \$700 were manufactured this year. The medals are of the fineness and size of a \$20 gold piece.

The Retail Jewelers' Association of Missouri, at the last regular meeting on Wednesday, decided not to give the annual picnic this season, but to direct all their energies toward making the annual meeting in February a success. In line with the idea advanced at the annual banquet held last February, it was decided to have a three days' session, and jewelers from all over Missouri will be invited to be present.

Upon complaint of the Michaels Loan & Mercantile Co., 900 Franklin Ave., August Rothenheber, 1913 Belt Ave., was last week arrested by the police. It is alleged that Rothenheber purchased a diamond ring and a garnet ring valued at \$77, paying for same with a check drawn on the City National Bank, which concern said the check was no good, as the signer had no account there. Rothenheber said that he did have an account at the institution some time ago, and had intended to deposit enough the next day to cover the amount of the check.

Wm. B. Bellamy, Warsaw, Mo., has disposed of his interests at that place and moved to Kansas City, Mo.

N. C. Anderson, Fargo, N. Dak., has been succeeded by the N. C. Anderson Co., H. V. Warnock, of Los Angeles, Cal., buying an interest. Mr. Anderson will go east some time in September to buy goods.

San Francisco.

TRADE CONDITIONS.

Trade conditions are now so rapidly improving that in some lines of business they may be regarded as being about normal again. It may seem strange to some to learn that a ruined city is now buying so many goods that the transportation companies are unable to handle all the consignments. Such is the case at present in San Francisco. The old-time facilities have proven inadequate and immediate steps are being taken for their enlargement. At present the congestion of freight is without parallel here and wholesalers and retailers are greatly inconvenienced. The wholesale jewelry trade, in common with others, is affected by the delay in receiving freight, and as large quantities of goods are being sold before they reach here, the enforced delay is also felt directly by the retailer. The traveling men who are out now are sending in unusually heavy orders for this time of the year. Crops are heavy and prices high, making times prosperous, and the great increase in population during the last year, owing to eastern emigration, is adding to the volume of business.

The jewelry store of M. Zacharias is now located at 2808 Fillmore St.

G. Aronsou's Loan Office has been located at 2438 Sacramento St., and a line of new goods installed.

J. S. Dinkelspiel has opened an office at 2408 Fillmore St., where he is continuing his business as dealer in precious stones.

The Diamond House, formerly located at 1034 Market St., and also at 56 Sixth St., has opened a large store at 1121 Van Ness Ave.

Schulz & Bernzatt have opened a jewelry store at 579 Hayes St., and have a watch making and optical department in conjunction with it.

Werner Bros., jewelers and watchmakers, located at 2106 Fillmore St., have been very busy since the fire, and have increased the stock of goods usually carried by them.

The Macey Jewelry Co. has secured a location for a store at Post and Fillmore Sts., and is now engaged in installing the fittings. An optical department will be operated as well as the regular jewelry business.

H. C. Hackett, who was formerly with Brittain & Co., at 120 Geary St., has now branched out for himself and has secured a location at 2506 Mission St. As this district escaped the conflagration, its business is going on as before. In fact, people are said to be patronizing as never before the neighborhood stores. While this may not continue long, the rapid growth of the Mission district makes this field a particularly inviting one.

The Baldwin Jewelry Co. opened this week on Van Ness Ave. in a new building of its own, and the store at 1521 Sutter St., that had been occupied ever since the fire, was abandoned. The firm expects a heavy trade, and has made preparations with a large stock of goods and a large force of salesmen. The new store resembles the one destroyed in the James Flood building in its interior arrangement, there being a balcony all around and the show cases in the center of the room.

Although the new store of Shreve & Co. at Sacramento St. and Van Ness Ave. is still far from completion, their factory building in the rear on Sacramento St. has been finished and work in this line is being resumed as fast as the necessary machinery can be installed. Notwithstanding the fact that so many jewelry stores have started

up in the regular retail districts, an increased business at the salesrooms both on Jackson St. and at Post and Grant Ave. is reported. It will probably be two months yet before the new store is finished, as the interior fittings are quite elaborate.

Radke & Co. opened their large jewelry store on Van Ness Ave. last week, and despite the fact that the store was as yet incomplete, did a large business. The stock embraces the entire line of goods kept formerly at the Sutter and Geary St. stores, and also articles that are more in the line of necessities, such as silver tableware, toilet articles, etc. The Devisadero St. store is to be continued for a time at least as a branch establishment, and if the trade there warrants it will be kept up permanently. The new store is fitted with a first-class repair department. Mr. Radke says that there is a great deal of this work since the fire.

Pacific Coast Notes.

W. Dupen, Jr., Sacramento, has been visiting in Woodland, Cal., with his wife.

M. Noack has moved into a portion of the store occupied by the Wiley B. Allen Co., at Santa Rosa, Cal.

A. Protsch, Redondo, Cal., has been appointed watch inspector for the Los Angeles and Redondo Railway.

A. E. Howell, formerly of Kansas City, has moved to Phoenix, Ariz., and will accept a position with the Crescent store, which succeeded to the business of H. F. Vantiburg, in the latter place.

Geo. H. Cook, of Geo. H. Cook & Co., has sold his interest in the firm's business in Prescott, Ariz., to his partner, O. A. Hesla, who will continue at the old location. Mr. Cook sells because of the state of his health.

Rosa Eppstein, 16 years old, charged with stealing a diamond ring from R. C. Mathew's store, 419 San Pablo Ave., Oakland, Cal., was before Police Judge Smith last week, but hearing was adjourned a few days, no complaint having been filed against the girl. The gem was recovered by boys who say that the girl threw away the circlet while she was being pursued in her flight from the store.

Omaha.

Curtis Lindsay has taken a position with his father in the jewelry business.

W. G. Sheppard has removed from Cambridge, Nebr., to Indianola, Nebr.

Herbert Hakan, formerly of Omaha, who had been in business at Sedalia, Mo., has sold out.

A. F. Smith, of the A. F. Smith Co., has gone on the Commercial Club's excursion to the Black Hills.

Grover Peterson, with the Sol. Bergman Jewelry Co., has returned from a two weeks' trip out west.

S. M. Thomas, of Tabor, Ia., came to Omaha last week in his automobile. Owing to a heavy rain, he was compelled to leave the machine here and take the train home.

C. O. Booth, of the Mawhinney & Ryan Co., with his family, have returned from a visit to Beaver Dam, Wis. N. C. Wheeler

has returned from Vermillion, S. Dak. W. B. Lodge has gone to Worland, Wyo.

P. E. Flodman and John Hendrickson, of the P. E. Flodman Co., is on a fishing trip to the Chisayo Lakes, Minn.

Kansas City.

F. W. Meyer is about to start to Colorado on a vacation trip.

Clarence Owen, Vinita, Okla., is now taking a course at the Kansas City Polytechnic Institute.

I. D. Simmons, Grand Saline, Tex., has accepted a position as watchmaker for the Green Jewelry Co.

Julius Donnell, after an absence of several years, has re-entered the employ of the Meyer Jewelry Co.

Chas. Moll, Gardner, Kans., was in the city this week, on his way to Excelsior Springs, where he will take a short rest.

Garrett Owen, who had been a watchmaker for Gurney & Ware, recently resigned to take a similar position with Clem. B. Altman.

Morris Brown, of Kionka & Kionka, left this week for a vacation of a couple of weeks. His place will be filled during his absence by John Miller.

Henry Melluish, Tucson, Ariz., who had been visiting relatives in Ottawa, Kans., has come to Kansas City to take a course in the Southwestern Optical College.

Mrs. C. W. Bowen, Brunswick, Mo., who recently took the watchmaking course with the Kansas City Polytechnic Institute, has returned to take the course in engraving.

Tovie Brenner, a pawnbroker, who is charged with buying six diamond rings stolen from the show window of Grim & Smith, and only reporting two of them, has been arrested.

C. B. Norton, of the C. B. Norton Jewelry Co., will leave the city Aug. 1, accompanied by his family, for a fishing trip to Minnesota. About the middle of August, Ward Lewis, of the same company, will take his family and go to the same State for a fishing excursion. Five of the house force are now away on vacations.

The following jewelers from the surrounding country have been visitors to this market during the past week: L. S. Slocum, Corning, Kans.; G. B. Douglas, Pleasant Hill, Mo.; Frank Burgy, Brunswick, Mo.; E. M. Crelin, Chillicothe, Mo.; Leslie Hutton, Lebanon, Kans.; J. D. Russell, Canon City, Colo.; Mr. Todd, of Powell & Todd, Mena, Ark.; E. S. Proper, Ames, Ia.; I. Eller, Richmond, Mo.

L. S. Cady, of the Cady & Olmstead Jewelry Co., reported to the police several weeks ago that a diamond worth \$150 had been taken from his store by a shoplifter. Pictures from the rogues' gallery were sent him. He picked out the picture of one woman who, he said, was the thief. The police arrested the woman and another who associates with her. They are being held. Mr. Cady says that the thief substituted a paste stone for the diamond.

Frank D. Kernochan, 17 North St., Middletown, N. Y., has been appointed official watch inspector of the Ontario & Western Railroad. The territory extends from Livingston Manor to Cornwall.

Cincinnati.

M. Schwab, of A. G. Schwab & Bro., with his wife, is at Atlantic City for a month.

Harry Gilsey, of S. & H. Gilsey, left last week for a three weeks' stay at Atlantic City and New York.

F. C. Taylor, Carlisle, Ky., was here last week on his way to Michigan, where he will stay two weeks with his family.

The engagement of D. Gutmann, of L. Gutmann & Sons, and Miss Edna Mosler, daughter of Max Mosler, president of the Brighton German Bank, has been announced.

Mabel Hall, who last week was tried for obtaining goods under false pretenses from the Oskamp Jewelry Co. and the Duhme Jewelry Co., has been sentenced to the penitentiary, though as yet no time limit has been set for the sentence to run.

A. E. Axman, Franklin, O., was here last week purchasing new stock for the new store at Middletown, O., where he will be located in the future. He has discontinued his store at Franklin, in which town he conducted business for 20 years.

Mayo Loeb, of Herman & Loeb, while alighting from a street car last week, slipped and sprained his ankle. This has detained him from his road business for a week. A. Herman, of this firm, left last week for his regular trip through West Virginia and Ohio.

Oskamp, Nolting & Co., July 14, were granted a charter as a stock company with a capital of \$200,000. The incorporators are Charles A. Nolting, for many years manager of the concern; William H. Oskamp, Frederick Schaefer, Louis F. T. watchman and Emil A. Bose. The new company retains the old firm name.

Out-of-town dealers who replenished their stock here during the past week included: C. C. Ackerman, Connersville, Ind.; J. H. Bovard, Newcastle, Ky.; H. A. Sturges, Bancroft, W. Va.; Frank B. Carey, Lebanon, O.; Nicholas Sanning, Walton, Ky.; L. C. Diefenbaugh, Lewisburg, O.; Mr. Balser, Blue Ash, O.; John Robinson, Mt. Sterling, Ky.; E. B. Scott, Batavia, O.; Mr. Blumburg, Chattanooga, Tenn.

A well-dressed and fine-appearing man, giving the name of H. E. Rose, called at the Oskamp Jewelry Co.'s store last week and selected a \$65 watch. As payment he gave a check which when presented at the bank proved to have been forged. Rose represented himself as a traveling salesman for the Mosler Safe Co. He also produced credentials and recommendations from prominent Cincinnati business men. Several other stores were visited by the swindler. A man answering to the de-

scription of Rose was arrested on suspicion at the Horning Hotel, but it proved to be mistaken identity and he was released.

Minneapolis and St. Paul.

Miss Bacheller, with Johantgen & Kohl, Minneapolis, has gone for a fortnight's vacation.

Henry Birkenhauer, of H. Birkenhauer & Co., Minneapolis, has been laid up for several days.

W. F. Renich, of Kirchner & Renich, Minneapolis, has gone to Dakota on a recreation trip.

L. H. Nichols, Minneapolis, has gone to Williston, N. Dak., where he has a position with Fred H. Smith.

The Geneva Optical Co., Minneapolis, has just filed articles of incorporation with a capital stock of \$15,000. The object is to deal in optical, photographic and electrical goods. The incorporators are Fred H. Smith and Percy M. Smith, of Chicago, and A. D. Hayes, Minneapolis.

Recent visitors in the wholesale houses of the Twin Cities included John Saxine, Prescott, Wis.; Ed. Carow, Dayton, Minn.; M. J. Ludwig, Spooner, Wis.; S. C. Hilleman, Murdock, Minn.; O. Larsen, Bowdle, S. Dak.; L. H. Bruns, Anoka, Minn.; W. S. Blake, Duluth, Minn.; J. D. Pederson, Echo, Minn.; M. D. David, Paynesville, Minn.; B. T. Nedland, Hillsboro, N. Dak.; R. F. Lussier, Cass Lake, Minn.; A. L. Mealey, Delano, Minn.; Paul Hunziker, Jordan, Minn.; Chas. Swedberg, Hopkins, Minn.

Detroit.

Mathauer & Koester, wholesale jewelers, 106 Woodward Ave., are enlarging their store and will put in more wall and floor cases.

Frank G. Smith, formerly of F. G. Smith, Sons & Co., quietly celebrated his 78th birthday this week. He is the only living charter member of Ashlar Lodge, No. 91, F. & A. M., which will celebrate its golden anniversary in January by issuing a gold medal bearing Mr. Smith's profile.

A chap who gave his name as Isadore Michael, Toledo, drifted into town this week and bought liberally of local wholesale jewelers. At the Chas. A. Berkey Co.'s office his bill was about \$100. He also placed a good-sized order with Noack & Gorenflo. Then he gave his check, signing it Isader Michalls. He claimed to be a clothing dealer and gave his supposed business address. The goods were to be sent by express. Inquiry by 'phone developed the fact that there is a clothing dealer

there named Michael, but he does not contemplate putting in a line of watches and jewelry, as the chap who came here said. The checks were worthless and no one is out anything, except one of the jewelers who entertained the fellow at dinner, and who says that the time was wasted.

New Stores and Enterprises.

G. R. Filmer, formerly of Aitkin, Minn., is a new jeweler in Mondak, Mont.

George W. Pinchon has recently opened a repair shop with J. C. Miller, at Ligonier, Ind.

A. J. Wiperman, jeweler of Idaho Falls, Idaho, contemplates opening a branch store in Rigby, Idaho.

J. F. Sumner & Son have opened a jewelry establishment at 17 S. Main St., Middleborough, Mass.

A. J. Laliberte, formerly with J. A. Filion, Lowell, Mass., has started on his own account at West Derry, N. H.

T. Goodman, formerly of San Francisco, Cal., recently engaged in the jewelry business at 112 E. Main St., Stockton, Cal.

S. L. Baxter & Son, Newton, Mass., have opened a branch store in Wellesley, Mass., of which the junior Mr. Baxter has charge.

Albert P. Myer, formerly watchmaker for Swan Swanson, Minneapolis, Minn., will shortly open a repair business on 7th St., S., in the same city.

Fred H. Towne, of Minneapolis, Minn., recently purchased a building at Mt. Henry, N. Dak., where he will establish himself in the jewelry business.

A. F. Frickie, formerly manager of the jewelry department of the Model Drug & Jewelry Store, Oklahoma City, Okla., has gone into the jewelry business there.

The H. M. Stevenson Co. has been incorporated at Buffalo with a capital of \$15,000 to deal in jewelry. The directors are Arthur R. Jenkins, Louis E. R. French and Nelson S. Hallett.

The Gem Diamond Mining & Development Co., 124 9th St., East Orange, N. J., was incorporated last week with a capital of \$125,000. The incorporators are: Albert L. Barney, Dr. C. A. Hegeman and E. A. Monfort, New York.

The Dinkelman-Rubert Co. was recently incorporated in Baltimore, Md., to deal in jewelry and kindred lines, with a capital of \$20,000. The directors are: Charles H. Dinkelman, Herman H. Rubert, Charles H. Rubert and William G. Post.

The Crown Optical Co., Rochester, N. Y., was recently incorporated to manufacture lenses and camera supplies with an authorized capital of \$5,000. The directors are: A. E. May, A. H. Hatmaker and C. E. Barber, all of Rochester, N. Y.

TRADE MARK.

A. C. BARD & CO.

IMPORTERS AND
CUTTERS OF

DIAMONDS

Loose or mounted goods on memo. to responsible dealers.

103 STATE ST., CHICAGO. COLUMBUS MEMORIAL BUILDING.

Pittsburg.

Charles O'Brien, of O'Brien & Co., spent last week in New York on business.

George B. Barrett left, last week, for North Bay, Canada, to spend several weeks.

Samuel C. Hall and Chester Hall, of Hall Bros. & Co., have gone on the road for Hall Bros. & Co., the new wholesale firm which recently opened a store in the Fulton building, 6th St. and Duquesne Way.

J. Alexander Hardy, of the Hardy & Hayes Co., is in Maine with his family. The Hardy & Hayes store has been renovated and the handsome clock in front of the Fifth Ave. store has been repaired and redecorated.

W. R. Hill, Fayette City; J. J. Schmidt, Turtle Creek; A. Katzenmeyer, Burgettstown; Fred A. Clough, Mt. Vernon; B. E. Brown, Monessen; Frank Bloser, New Kensington, were among the out-of-town merchants who were in Pittsburg last week on buying trips.

Detective Rothrauff, of Braddock, last week, arrested a colored man who gave the name of William Banks, and who said that he had recently been in Youngstown and Cleveland. The negro had some jewelry in his possession and the man is being held until his record can be inquired into.

The annual outing and picnic of the employes of Heeren Bros. & Co. was observed last Saturday, when 125 employes went to Ross Grove in special trolley cars and spent the day. The outing is given every year by members of the firm. Refreshments were served and all kinds of sports indulged in, such as racing, bowling and ball playing. Harry Heeren left this week for Somerset to spend his vacation.

W. W. Wattles, Sr., of W. W. Wattles & Sons, is summering at Bemus Point, Lake Chautauqua, with his family. C. W. Wattles and his family goes there next week, where the senior Wattles has a cottage. From there he will make a trip to the Thousand Islands. W. M. Fowler, of the same firm, is at Mt. Clemens, Mich. H. W. Bilke, of the Wattles house, is in the mountains at Uniontown.

W. O. Harrison, formerly with the Geo. B. Barrett Co., has associated himself as a partner with the Marsh, Brown & Mather Co., which has been incorporated with a capital of \$75,000. James R. Brown is president and C. C. Marsh is secretary. Mr. Harrison was a confidential man at the Barrett house, where he had been employed for a number of years. The directors of the new company are: Cassius C. Marsh, James R. Brown, William W. Mather, William W. Mather, William O. Harrison, Louis B. Mather.

Creditors of Pauline L. Lowenthal, Bradford, Pa., have received from Referee in Bankruptcy Jos. M. McClure notices to the effect that the report of the trustee of the bankrupt estate shows that he has in hand awaiting payment of dividends, \$1,206.73. A meeting of the creditors will be held at Mr. McClure's office in Bradford July 30, 1906, at 10 A. M., for the purpose of passing on this report and declaring a final dividend for the creditors.

Before taking to Kansas City, Mo., Frederick H. Decker and Hugh Roman, the two men who confessed to robbing Smith &

Grim's jewelry store in that city, Detective J. Orford, of Kansas City, made a trip to New York and had a talk with the father of Decker, who is a Brooklyn banker. When arrested, Decker told the police how he and his companion robbed the store and pawned some of the jewelry here. When Decker's father learned of his son's arrest, he sent a private detective who met the Kansas City officer on his arrival. Detective Orford went back with the New York detective, to see the boy's father. The elder Decker, Orford said, arranged with him to redeem all of the stolen plunder and to make good any other jewelry that is missing when this amount is ascertained by the firm from whom the goods were stolen. It is reported, that through this action on the part of the elder Decker, both young men may get off without prosecution.

Harrisburg, Pa.

The wife and son of I. S. Ricker, 817 N. 3d St., are on a month's trip through the northern part of the State.

Four burglars broke the glass of a window in the store of A. B. Winters, in Jermy, Pa., recently, and helped themselves to a quantity of jewelry and other articles, making good their escape. Two young men who surprised the burglars in the robbery were intimidated by threats of shooting.

The gold and bronze key to lock and unlock the great bronze doors at the new Capitol has been received. It weighs over a pound and is engraved with the names of the architect, the makers of the doors and the builder of the Capitol on a double key-stone in the center of the wreath. It will be used in the dedicatory ceremony Oct. 4.

Easton (Pa.) City Councils have passed ordinances licensing transient retail merchants by the payment of \$100 each month during the continuation of their sale; and peddlers, auctioneers and drummers by the payment of \$2 for one day's business; \$10 for one week, \$25 for three months, and \$100 for one year.

G. M. Huston, a retired jeweler, in company with his wife and son, Lewis, arrived in this city on the evening of July 15, after having covered exactly 30,940 miles in an automobile. It is his intention to make a trip covering 50,000 miles, and he expects to traverse the balance of the distance by Dec. 1, 1906. He left Chicago May 26, 1905, and toured through the northwest into Canada, and later returned to his home. On June 15 he started out again and came east to Wheeling, W. Va., and then on through to Atlantic City, where he remained seven weeks. Aug. 28 he left Atlantic City and toured through the New England States and back to Washington via Montreal and Niagara Falls. From Washington he toured through the south to Jacksonville. The return trip was started May 7, coming via Macon and Gettysburg. From here the party went to Atlantic City, and later to the Pacific Coast. They have had many thrilling experiences.

A labor paper at Cleveland recently published a half column editorial criticising the factory of the North American Watch Co., Mansfield, O., claiming that the conditions were unsanitary and making other complaints not warranted by the facts.

Lancaster, Pa.

T. Wilson Dubbs and family are home from a visit to the seashore.

F. A. Peters, of the H. S. Meiskey Co., has been visiting Atlantic City.

Fred Wheeler, of the Non-Retailing Co., has returned from a trip to Vermont.

H. A. Romig, salesman for Benjamin Lichtenstein, was in Reading, Pa., last week.

Walter A. Stamm, a well-known silver worker, died last Thursday, after a brief illness.

William Y. Sever, a director of the Hamilton Watch Co., and his family have gone to Europe.

The Lancaster jewelry stores are observing a Friday half-holiday, and will continue it until September.

The Hamilton Watch Co.'s factory has resumed operations after being closed two weeks to give its employes a vacation.

Simon Mishler, a watchmaker, has gone to Baltimore, expecting to open a jewelry store in one of the towns near that place.

Christian Hershey, watchmaker for Charles J. Kinzer, Bluefield, W. Va., is at his home in Lancaster, owing to ill-health.

Thomas C. Mullenberg, who travels for the H. S. Meiskey Co., has gone to Atlantic City and the Thousand Islands for two weeks.

Among the jewelers visiting this city last week were S. H. Miller, Mount Joy; H. F. Andrews, Strasburg; H. L. Oberlin, of Howard L. Oberlin & Bro., Columbia; S. R. Stibgen, Marietta.

H. A. Platt, with Rees & Yankauer, paid his first visit to Lancaster last week, as did E. L. Mumford, of Miller, Fuller & Whiting, North Attleboro.

Rochester.

Louis M. Derby, Albion, N. Y., is holding an auction sale.

David M. Finkelstein, alias "Dr. Fink," alias "Dr. B. A. Raff," wanted in this city to answer a charge of grand larceny, second degree, for misappropriating and converting to his own use \$161, the personal property of Abraham Rapaport, a jeweler of this city, was arrested recently in Baltimore through information furnished by the Rochester police department. Finkelstein, it is claimed, came to this city some time ago and opened up offices. He practised under the name of Dr. B. A. Roff and quickly made friends, building up a large practice. About a month ago he went to Rapaport, who conducts a jewelry store on Stephany Pl., and asked to be shown a gold watch, diamond ring, also a chain and charm. He gave Rapaport his professional card and asked to be permitted to take the jewelry on approval. Rapaport agreed and says that was the last he saw of Finkelstein and the jewelry.

The shipment of moss agates and rose quartz from the vicinity of Deadwood, S. Dak., to Germany has revived interest in that product again. The rose quartz is used for parasol handles and jewelry. The shipment weighed 3,500 pounds, and was valued at \$700.

Patented April 20, 1897. Feb. 21, 1899.

LEARN WATCHMAKING AT HOME

by THE De SELMS CHART SYSTEM, copyrighted and patented. The
most simple, practical and up to the minute method of learning.
Saves you time and money while learning and puts you in a position to
more than double your income.
50 million timepieces to be repaired. Accurate time is a necessity in the
business world. When time is money the watchmaker gets his share of
profit. Positions for graduates. Booklet free. Write to-day.

Practical Course in Adjusting

By THEO. GRIBI,

COMPRISING

A review of the laws governing the motion of the
balance and balance spring in watches and
chronometers, and application of the principles
deduced therefrom in the correction of vari-
ations of rate arising from want of isochronism,
change of position and variation of temper-
ature.

ELUCIDATED AND DEMONSTRATED

by original experimental researches in the actual
problem, never before published, showing the
causes that are operative in the variation of
rate, and leading to correct remedies. To
which have been added chapters on

How to make a Balance Arbor with
Modern Appliances; How to Clean a Watch
Properly; and, the Lever Escapement—
Some Current Defects in it and How to
Remedy Them.

PRICE, \$2.50.

250 pages, including 18 diagram plates; Fine
Paper; Large Type; Clear Illustrations; System-
atically arranged; Solid Binding.

(Corbin Building)

[IN WHICH IS CONTAINED A LIST OF THE LATEST PATENTS GRANTED BY THE UNITED STATES AND GREAT BRITAIN, THE UNITED STATES PATENTS THAT HAVE EXPIRED AND THE REGISTERED TRADE-MARKS.]

UNITED STATES PATENTS.

ISSUE OF JULY 10, 1906.

825,314. EYEGGLASS-GUARD. WILLIAM G. HAHN, San Francisco, Cal. Filed July 25, 1902. Serial No. 117,013.

An article of the class described consisting of a V-shaped member formed with diverging legs and having the outer extremity of one leg secured to the lens, the opposite leg being bent backward

out of the plane of said first-mentioned leg and having its free extremity bent to form an angle with the remaining portion and in a plane approximately at right angles with said first-mentioned leg, and a bearing-button secured to said terminal portion of the opposite leg, said V-shaped member being formed of flat resilient material.

825,316. HOLDER FOR COMMUNION-CUPS. CALVIN P. HARRIS, New York, assignor to Reed & Barton. Filed July 24, 1905. Serial No. 270,959.

A pew-rack for communion-cups consisting of a strip or board adapted to be attached edgewise to the back of a pew, said strap having a vertical

opening therethrough adapted to hold a communion cup when set therein, and said strip having a horizontal slot or kerf cut into one edge thereof and extending therein beyond the cup-holding opening, whereby the rack is rendered noiseless.

825,319. SUN-DIAL. EDWARD G. HEWITT, New York. Filed April 20, 1905. Serial No. 256,650.

In a sun-dial, the combination of a horizontal base having means for securing it to a support and permitting partial rotation of the base in a horizontal plane, standards at opposite sides of the base, a slotted, arc-shaped carrier, having ears de-

pending from its ends and pivoted to the standards whereby the carrier may be adjusted in the

plane of the meridian to correct for latitude, an arc-shaped dial member loosely mounted in the carrier and provided with clamping-screws extending through the slots in the carrier, whereby the dial member may be rotatively adjusted about its axis and clamped in adjusted position, to correct for longitude or equation of time, and a gnomon supported at the axis of the dial member.

825,347. ALARM-CLOCK. WILSON E. PORTER, New Haven, Conn., assignor to the New Haven Clock Co., New Haven, Conn. Filed Dec. 4, 1902. Serial No. 133,922.

The combination with the time-train of a clock-movement; of an alarm-operating train; a plurality of checking devices; a plurality of rotary mem-

bers operated by the time-train and each actuating an alarm-checking device and one of said rotary members carrying an indicator-hand; and means for releasing one of said checking-devices independently of its corresponding actuating member.

825,391. SAFETY-HOOK. MARY C. HORTON, Woonsocket, R. I. Filed Nov. 23, 1905. Serial No. 288,723.

The improved safety-hook herein described, consisting of a single piece of tempered metal and comprising a pin-tongue and a double spring-coil,

a body portion extending substantially parallel to the pin-tongue and provided with an intermediate outwardly-projecting closed loop and also with a pin-catch, a U-shaped bend whose inner upper end is in contact with or in close proximity to said loop, and a curved terminal bend continuous with the first-named bend and having its outer end curved inwardly into proximity with said spring-coils.

825,403. PIN-TONGUE AND HINGE-JOINT. EUGENE W. MOREHOUSE, Providence, R. I., assignor to B. A. Ballou & Co., Providence, R. I. Filed March 27, 1905. Serial No. 252,360.

A pin-tongue for hrooches and similar articles pointed at one end and bent at an angle near its

other end and terminating in a circular portion the axis of which is substantially parallel with said bent portion.

825,483. SPECTACLE END PIECE. RUDOLPH RISER, Chicago. Filed March 8, 1906. Serial No. 304,887.

The herein-described blank for a temple end

piece comprising an arm, ears at the ends thereof to bear on opposite sides of the lens, a pair of

temple-ears projecting laterally from the arm at the base of one of the end ears, and a pair of ears near the temple-ears projecting laterally from the arm, to bear on the edge of the lens.

825,442. FOUNTAIN-PEN. FREDERICK W. BENDER, Hoboken, N. J. Filed Feb. 26, 1906. Serial No. 302,841.

In a fountain-pen, a reservoir, a pen-section, carried at the forward end of said reservoir, an elastic tube, shorter than said reservoir and closed

at the rear end, mounted on said pen-section, and lying within said reservoir, a piston mounted in said reservoir at the rear of said tube, an operating-rod carried by the said piston, passing through the rear end of said reservoir, and means for admitting the air between said tube and piston at any position of the piston.

825,596. COLLAR-BUTTON. WILLIAM L. FROSS, Seattle, Wash. Filed May 8, 1905. Serial No. 259,276.

In combination with a button comprising a foot carrying a shank with a head hinged to the shank, a supplemental head formed of a piece of material

of substantially the same size as said foot and centrally provided with an opening receiving said shank to enable said supplemental head to be moved to engage the hinged head and to be tilted in unison therewith, and an inwardly-movable tongue on the shank having its bottom edge spaced from said foot.

825,605. DISTANCE INSTRUMENT. WACLAW LASKA, Lemberg, Austria-Hungary. Filed Sept. 8, 1905. Serial No. 277,561.

A distance instrument comprising a telescope,

a fixed wire therein, an arm rigidly connected to the telescope-axis and standing vertical when the telescope is horizontal, a horizontal bar, a slide adjustable thereon, and a knife-edge adjustable

on the said slide and movable on it to a constant extent, the said arm resting against the said knife-edge.

825,644. BRACELET. JAMES A. FULLER, Providence, R. I., assignor to Hamilton & Hamilton, Jr., Providence, R. I. Filed Oct. 30, 1905. Serial No. 285,079.

A two-part hinged bracelet having means for pivotally securing the parts together, and means for holding the parts in the closed position consisting of a snap comprising a rigid member formed from a strip of sheet metal, bent U-shape and constructed to have oppositely-disposed side notches and a neck on the face of the member adjacent the bent end of the same, and a spring member formed of spring-wire bent U-shape forming spring-arms with inwardly-bent L-shaped ends, and means for securing the members of the snap in the bracelet.

sisting of a snap comprising a rigid member formed from a strip of sheet metal, bent U-shape and constructed to have oppositely-disposed side notches and a neck on the face of the member adjacent the bent end of the same, and a spring member formed of spring-wire bent U-shape forming spring-arms with inwardly-bent L-shaped ends, and means for securing the members of the snap in the bracelet.

825,650. EYEGLASS-GUARD. LEWIS A. HINES, Savannah, Ga. Filed April 3, 1905. Serial No. 253,509.

The combination with an eyeglass-frame, of a main guard secured to the frame and provided with a pivot-car, a self-adjusting guard also hav-

ing a pivot-car, a pivot-stud connecting said ear, the length of the stud being parallel with the nose-engaging surfaces of the guards, and interengaging means on the pivot-cars for limiting independent movement of the pivoted guard.

825,676. LOCKET. EDGAR A. PHILLIPS, Providence, R. I., assignor to Hamilton & Hamilton, Jr., Providence, R. I. Filed Feb. 27, 1906. Serial No. 303,259.

In a locket, a concealed hinge comprising outer and central hinge-knuckles, a pintle extending through the outer and central hinge-knuckles, and

rotatable means intermediate the central hinge-knuckle and the pintle whereby the pintle is adapted to have a rotary and an eccentric motion with respect to the axis of rotation of said means in opening and closing the locket.

825,789. EYEGLASS ATTACHMENT. HORACE B. WOOD, New Haven, Conn. Filed Nov. 15, 1905. Serial No. 287,506.

As an article of manufacture, a covering for the

contact member of the nose piece of eyeglasses, comprising a tubular member of rubber provided with a peripheral molded opening.

825,798. THERMOMETER. MILLARD F. BECKTON, Jersey City, N. J. Filed March 27, 1906. Serial No. 308,307.

A thermometer comprising a body of substantially triangular shape in cross-section, said body being formed adjacent the apex with a mercury-bore and in rear of said bore with a longitudinally-arranged opening, and a light reflecting scale-strip, carrying scale marks inserted in said opening,

the side of the strip next the bore being convex, and scale-finders of a contrasting color relative to

the strip disposed to define the edges of the strip when in position.

825,833. ELECTRIC CLOCK. ROBERT L. HIGHT, Decatur, Ill. Filed Aug. 31, 1905. Serial No. 276,593.

In an electric clock, an escapement mechanism an actuating-spring therefor, a rotary electric motor

for intermittently rewinding said spring, current-controlling means for said motor carried by said escapement mechanism, and an automatic brake operatively connected to said motor and in circuit therewith and with the current-controlling means.

825,875. CLOCK. MARTIN WORTMANN, New York. Filed Jan. 24, 1905. Serial No. 242,512.

The combination of a winding-arbor, a spring-barrel rotatively mounted thereon, a mainspring connecting the barrel and arbor, a barrel-gear, an arbor-gear, and intermediate differential gears

meshing with the barrel-gear and the arbor-gear, the arbor-gear being mounted concentrically with the arbor and so as to rotate concentrically relatively to the arbor and connected to the arbor to permit movement of the arbor relatively to the arbor gear during the winding operation, the bearing for the arbor-gear including a flanged sleeve upon the arbor providing a flat bearing for the arbor-gear, a ratchet clamped in fixed position relatively to the flanged sleeve and also providing a flat bearing for the arbor-gear, the two flat bearings being at opposite faces of the arbor-gear, and

a pawl secured to the arbor-gear and engaging the ratchet.

DESIGNS.

38,126. HAT OR STICK-PIN. GEORGE M. MEREDITH and JAQUELIN M. MEREDITH, JR., Norfolk, Va. Filed April 25, 1906. Serial No. 313,720. Term of patent 3½ years.

BRITISH PATENTS.

(ABRIDGMENTS OF SPECIFICATIONS, 1905, FROM *The Illustrated Official Journal*.)

ISSUE OF JULY 4, 1906.

4,366. TELESCOPES, ETC. J. AITCHISON, London. March 2.

In telescopes, binoculars, and like glasses, the ratio of aperture to focal length is increased by the use of combinations of two or more lenses of larger diameter mounted near together in place of single object-glasses. Such a combination

of two lenses *c* with an intermediate air space *d* is shown in the figure. It is stated that, by a proper selection and arrangement of lenses, spherical and chromatic aberrations may be more perfectly corrected. The curves, axial thicknesses, and optical constants of the component lenses of one system are given in the specification.

4,502. DRESS PINS. T. C. KIRTON, Leigh, Lancashire. March 4.

A retainer for hat and scarf-pins consists of a hollow casing *a* containing a piece *b* of india-

rubber pierced with a longitudinal hole through which the pin *g* passes. In a modification, the lower part *d* of the casing is dispensed with. The retainer may be secured to the head of the pin by a chain.

4,514. WALKING-STICKS, ETC. F. W. PARNELL, Devonport. March 4.

Flexible walking-sticks, canes, or hunting-crops are constructed with a core *a* of steel, cane, or other suitable material, covered with two layers

b, c, the inner of which may be of hemp, flax, cotton, etc., and the outer of plaited whipcord, twine, catgut, etc.

[Reference has been directed under Patents Act, 1902, to Specifications No. 290, A.D. 1890; No. 2183, A. D. 1895, and No. 1855, A.D. 1902.]

4,513. CLOCKS. F. A. CHANDLER, Leamington, and B. BONNIKEN, Coventry, both in Warwickshire. March 4.

Electric Clocks.—In secondary clocks having a rocking armature *B*, Fig. 4, on a center *C*, rotary

ratchet motion is imparted by an attached anchor E, acting on a wheel G with teeth made of the form shown. Each pin F or F¹ of the anchor ad-

FIG. 4.

FIG. 3.

vances the wheel half a tooth and then locks it. To get silent working, catgut forks, Fig. 3, may replace the steel pins.

4,711. CIGAR, ETC., HOLDERS. W. M. WALKER, Goswell Road, E. C., and C. A. PETRE, Islington, both in London. March 7. No patent granted (sealing fee not paid).

A spring clip is added to a cigar or cigarette tube to enable the cigar or cigarette to be entirely consumed. The clip may be made from two strips

A, A', of metal riveted together at B. The clip is then bent into the required shape and inserted into the tube D as shown in Fig. 4, the ends C of the strips being turned over to prevent the clip from being pressed too far in. A pin E is let into the tube to prevent it from being withdrawn. Fig. 8 shows a modified form of clip made from a single blank.

4,872. NECKTIE RETAINERS. R. RIETH-MULLER, Hanover, Germany. March 8.

The retainer, which is attached to the collar stud, consists of two wire arms a, b, brought to-

gether at their ends d into points directed towards each other. These arms are bent out so as to leave a circular space c in the center of the retainer, through which the head of the stud is introduced. The cravat is tied in the usual manner, and is held in position by the turned-up points of the retainer engaging in the material.

Complete specifications accepted June 27, 1906. 1905.

17,077. TIME RECORDER. MACMASTER.

19,268. FIELD GLASSES. BARTON.

19,487. LOCKET FASTENING. SMITH.

25,350. ELECTRICAL CLOCK-WINDING MECHANISM. TRILKE.

25,876. HAIR-PIN. PRYCE-JONES.

Applications filed June 18 to June 23, 1906.

13,941. FOUNTAIN-PEN. H. L. TOOD, Finsbury Park, London.

13,948. SPECTACLES. R. W. E. WHITEHEAD, London.

14,144. CUFF-HOLDER. CHARLES WHITE, Dorking, Surrey.

14,215. STUD. THOMAS MORTON, Birmingham.

14,234. TIME RECORDER. J. F. KIELY, London. Complete specifications.

14,356. HAT-PIN. ENGELBERT RATING, London. Complete specification.

14,380. HAT-FASTENER. JAMES ORCHARD, Birmingham.

14,415. TEAPOT. C. H. HITCHEN, London.

14,424. POCKET-KNIFE. CARL VOM EIGEN, London. Complete specification.

UNITED STATES PATENTS THAT HAVE EXPIRED.

[Reported especially for THE JEWELERS' CIRCULAR-WEEKLY by R. W. BISHOP, Patent Attorney, Washington, D. C.]

Issued July 16, 1889.

406,923. METHOD OF ORNAMENTING SURFACES WITH MOLTEN METAL. W. H. MARSHALL, Chelsea, Mass.

406,999. METHOD OF DECORATING METAL SURFACES. NELLIE C. DUNCOMBE, New York.

407,015. CANE OR UMBRELLA HANDLE. AUGUST KESSLER, New York.

407,040. BOX FOR REPEATING-WATCHES. HENRI SANDOZ, Locle, Switzerland, assignor to Adolphe Schwob, New York.

407,055. POCKET-KNIFE. WILLIAM BREDE, Hamakua, Hawaii.

407,096. SNAP-HOOK. C. A. MANN, Buffalo, N. Y., assignor of one-half to A. C. and Frank Knothe, New York.

407,216. UMBRELLA-RUNNER. GUSTAVUS JOSEPHS and E. I. O'NEILL, Philadelphia, Pa.

407,243. WATCH. HENRY REMPE, Houtzdale, Pa.

407,282. SHOW-CARD. J. W. DAVIES, Worcester, Mass.

407,305. PROCESS OF DECORATING BASE METALS, GLASS, ETC., WITH PRECIOUS METALS. FRANZ ROESSLER, Perth Amboy, N. J.

Designs issued July 12, 1892, for 14 years.

21,700. SPOON. G. L. CROWELL, JR., Arlington, N. J., assignor to Dominick & Haff, New York.

21,705. GLASS VESSEL. T. G. HAWKES, Cornwall, N. Y.

21,709. BRUSH-BACK. G. L. CROWELL, JR., Arlington, N. J., assignor to Dominick & Haff, New York.

21,711. BOTTLE. B. I. MOTT, Brooklyn, N. Y.

Designs issued July 18, 1899, for 7 years.

31,221. CHAIN. W. C. EOGIE, Newark, N. J.

31,222. PENHOLDER. OTTO HUBER, New York, assignor to Eagle Pencil Co., same place.

31,224. SPOON HANDLE. H. L. WALLACE, Wallingford, Conn., assignor to R. Wallace & Sons Mfg. Co., same place.

The Trade-Mark Law of Australia.

THE Australian Commonwealth trade-mark act came into force on April 27 last. The stamp duties are double those under the new English law. The trade-mark law extends to the whole Commonwealth, and any trade-mark already registered in any of the States of Australia can be extended to the whole of Australia, unless previously applied for in any other State by another party.

As (subject to extremely strong proof of superior right by another party) the first

applicant will be considered the rightful owner of the trade-mark, and in other countries firms have lost valuable trade-marks through others registering their marks first, it is desirable that all firms wishing to have their trade-marks registered in Australia should apply promptly.

Jewelry, Clocks, Watches, Silverware and Kindred Lines Exported from New York.

WASHINGTON, D. C., July 18.—The following were the exports of jewelry, silverware and optical goods, clocks, watches and kindred lines from the Port of New York for the week just ended:

Amsterdam: 3 packages diamond cutting machinery, \$350.

Barcelona: 2 packages jewelry, \$160.

Berlin: 37 packages clocks, \$1,863.

Bremen: 1 package optical goods, \$250; 4 packages plated ware, \$390; 2 packages watches, \$248.

Brussels: 1 package optical goods, \$555.

Calcutta: 6 packages plated ware, \$672; 26 packages clocks, \$561; 21 packages clocks, \$259; 3 packages watches, \$3,360; 24 packages clocks, \$372; 7 packages plated ware, \$1,177.

Ceara: 4 packages watches, \$1,858; 5 packages jewelry, \$1,154; 26 packages clocks, \$522.

Christiania: 8 packages clocks, \$362.

Glasgow: 55 packages clocks, \$481.

Gothenberg: 5 packages clocks, \$148.

Hamburg: 1 package optical goods, \$160; 1 package watches, \$2,740; 3 packages clocks, \$125; 1 package jewelry, \$120; 10 packages jewelers' supplies, \$3,500.

Ilavana: 4 packages plated ware, \$113; 11 packages clocks, \$128.

Ilavre: 10 packages clocks, \$550; 1 package jewelry, \$500; 1 package optical goods, \$352; 1 package stereoscopic views, \$200.

Kingston: 2 packages watches, \$113.

Liverpool: 2 packages silverware, \$280; 1 barrel sweepings, \$175; 227 packages clocks, \$3,100; 4 packages jewelry, \$1,272; 3 packages silverware, \$1,918; 1 package plated ware, \$125.

London: 2 packages silverware, \$100; 112 packages clocks, \$906; 12 packages scopes and views, \$606; 4 packages plated ware, \$304; 1 package optical goods, \$350; 3 packages clocks, \$132; 28 packages and views, \$1,274; 2 packages silversmiths' sundries, \$390; 21 packages watches, \$2,942; 2 packages plated ware, \$490; 6 packages scopes and views, \$233; 1 package ivory, \$250; 51 packages clocks, \$1,905; 1 package plated ware, \$111; 8 packages optical goods, \$2,082; 20 packages watches, \$3,091; 4 packages scopes and views, \$988; 2 packages silverware, \$100; 4 packages scopes and views, \$988; 2 packages silverware, \$100; 4 packages scopes and views, \$250; 20 packages watches, \$3,195; 3 packages silverware, \$2,000; 125 packages clocks, \$3,654; 7 packages optical goods, \$462.

Oporto: 42 packages clocks, \$481.

Port Alegre: 16 packages clocks, \$226.

Port of Spain: 1 package jewelry, \$103.

Rio de Janeiro: 1 package watches, \$194; 65 packages clocks, \$1,615; 3 packages jewelry, \$434.

Southampton: 2 packages watches, \$1,280.

St. Johns: 7 packages clocks, \$204.

Stockholm: 1 package jewelry, \$350.

St. Michaels: 21 packages clocks, \$280.

Sydney: 36 packages clocks, \$345.

Vera Cruz: 12 packages plated ware, \$1,598; 41 packages clocks, \$502.

Mainspring Don'ts

Simple Hints for Those Who Handle Mainsprings

Don't fail to provide yourself with the best mainspring winder that can be obtained. See that the hooks on all arbors of the winders are no longer than the thickness of the thinnest spring, and thus avoid kinking, and therefore unnecessary breaking of mainsprings.

Don't use a mainspring that is too long, because it fills the barrel and prevents that part, or the mainwheel, from making the required number of revolutions, with the consequence that the watch will not run as it should after each winding.

Don't use a mainspring that is too strong, because it will set, increase the percentage of breakage and injure the watch.

Don't use a mainspring that is too wide, and be sure that the tip and brace do not extend beyond the limits of the cover and barrel.

Don't forget that a mainspring should not occupy more than one-third the diameter of the barrel, thus leaving two-thirds to be divided between the arbor and winding space, to enable the watch to run about thirty-six hours.

Don't expect a mainspring to be flat if you put it in the barrel with the fingers. This method usually injures the spring, gives it a cylindrical form, and thereby increases the friction in the barrel.

Don't bend the inner or outer end of the mainspring with flat-nosed pliers, but provide yourself with specially made round-nosed pliers which will give a circular form to these parts, prevent short bends, contract the inner coil, and thus secure a closer fit to the barrel arbor without injuring the spring.

Don't expect other than a properly fitted flat mainspring with rounded edges to produce the least friction in the barrel, allow the greatest amount of power to the train, and give the best results as to time, service, etc.

Don't expect a mainspring to always endure extreme changes in temperature, or electrical disturbances, or straightening at full length, or neglect from lack of cleaning and oiling.

Don't expect a watch that needs cleaning or other repairs to run satisfactorily by merely putting in a new mainspring.

Don't expect a mainspring to plough through too much dirt.

Waltham Watch Company

Waltham, Mass.

THE HOROLOGICAL REVIEW.

POINTS *on the* LEVER ESCAPEMENT.

Address of C. T. HIGGINBOTHAM, Supt. of the South Bend Watch Co., before the Convention of the Retail Jewelers' Association of Illinois.

WHEN, 400 years ago, Peter Henlein, of Nuremberg, essayed to manufacture watches, the best available device he could find for regulating the motion of the train wheels was a verge escapement carrying a steel balance, to which was attached a piece of catgut, or its motion controlled by a projecting bristle against which one of the arms struck. This crude contrivance was little better than a mechanical toy, compara-

would have been impossible for him to have secured the results recorded had it not been that he introduced a remontoire attachment to the train, which wound the third or fourth wheel at short intervals.

The possibilities of accurate timepieces for use at sea turned the attention of horologists to the subject of escapements, and many inventions followed each other in rapid succession, many of which have gone entirely out of use. The principal escapements were the cylinder, the duplex, the dentent or chronometer and the lever; of these the detached lever has stood the test and proved itself best adapted to a pocket timepiece. It is this form of escapement to which I desire your attention.

The lever escapement has undergone many changes since its first introduction by Mudge in 1763. In these changes certain fixed principles have been established: (1) The number of the escape-wheel teeth has been fixed at 15; (2) the extent of the span of the pallets at $3\frac{1}{2}$ teeth; (3) exposed pallets have been almost universally adopted; (4) the lift of the pallets or oscillation of the fork has been fixed approximately at 10 degrees of a circle. The old controversy as to the respective merits of the long and the short fork may be considered virtually settled, the roller impulse having been determined at approximately 30 degrees. This is to say, the distance from the center of the balance staff to the face of the roller or impulse pin is about one-third the distance from the center of the balance staff to the center of the pallet arbor.

There are, however, still a few points in dispute. I shall endeavor in a fair and impartial manner to present the arguments for and against these disputed points, allowing you to judge of their respective merits.

I would first call your attention to the question of equi-distance lockings as compared with equi-distance centers. In the former the locking faces of the pallet stones are equally distant from the center of oscillation, which in this case is the center of the pallet arbor; the advantage claimed is that an equal draft is thus secured. To

secure an equal impulse it is necessary to form the impulse faces of the pallet stones at widely different angles, the discharging stone forming the most obtuse angle with respect to the locking face. The disadvantage of this form is that there is a somewhat greater loss of power from side shake owing to the conditions produced by the impulse of the receiving stone, commencing, as it does, at the same distance from the center that the discharge does, but, unlike it, approaching the center in receiving its impulse. This loss is in proportion to the diminished distance of the impulse face of the receiving stone, as compared with the discharging stone. In the equi-distance center's escapement the center of the impulse faces are equally distant from the center of

FIG. 1.

FIG. 2.

tively useless as a timepiece. It carried but a single indicator, an hour hand (the minute hand would have been a useless superfluity). It was not until 25 years later, and the fusee was invented, that the minute hand was added. About 150 years after the fusee had been applied the hairspring was invented, and it was now discovered that the verge escapement was too sensitive to the slightest variation in power to be satisfactory as a governing device. Still, up to the middle of the 18th century, nothing better had been devised; in fact, the celebrated chronometer with which John Harrison took the English prize of £20,000 had an improved form of verge escapement, and it

oscillation. This secures the advantage of an equal loss of power from side shake. To overcome the disadvantage of unequal draft, the stones are set at different angles in the pallet. Either of these forms is capable of excellent results.

Another point of dispute is as to the best form of impulse faces, both for the pallets and for the escape teeth. One method is to make the pallet stone impulse face a perfectly flat plane, and to curve the impulse face of the escape teeth transversely with the face of the wheel. Another method is to curve the impulse face of the pallet stone transversely with the face of the pallet and fork, and to make the impulse face of the

Where
Time is Life

escape wheel tooth a flat plane. Still another method is to make the impulse face of the escape wheel curved longitudinally with the face of the wheel, the impulse face of the stone being curved transversely. The object of all these forms is to present as small a contact of surfaces as possible—not, as may be supposed, to lessen friction, as friction has nothing to do with the extent of surfaces, but to lessen cohesion caused by oil between the surfaces.

Still another disputed point is the table roller as compared with the double roller, and here let me say that the double roller is by no means a new device. We are all aware that it was in use more or less 50 years ago, but it is not generally understood that the earliest lever escapements were of this type. In considering the merits of the two devices, it must be remembered that the guard pin and roller action is entirely one of safety. It is a misuse of this action to employ it for the correction of other errors that may exist in the escapement.

A correctly designed and properly adjusted escapement will produce just as accurate results as to time without as with this safety action. In ordinary use, if the escapement is so designed and adjusted, the guard pin or guard piece will not touch the roller twice in the course of a year except when the train is reversed by setting the second hand backward.

I have here a watch without any safety device. The guard pin has been removed. This watch was not especially prepared in any other particular for the test to which it was subjected. It was merely selected from stock, and the guard pin broken off. It has been carried for a long period in the pocket in ordinary use, on street cars, bicycles, horseback and railway trains. It has just completed a journey of 2,500 miles, one night having been spent by its wearer in an upper berth immediately over the trucks of a sleeping car. During this time it has never gone out of action, even though it has dropped to the full length of the chain by which it was attached to the wearer's vest three or four times. I have used the term "out of action" instead of overbanked, as is sometimes done, for the reason that

the terms are not synonymous. A watch that overbanks is one where the extent of vibration of the balance is so great that the roller pin passes entirely around and strikes the outside edge of the fork, thus causing acceleration of time. When the guard pin passes the edge of the roller so that the fork slot will not be in position to receive the roller pin, it is said to be out of action.

The claim for the double roller escapement is additional safety against going out of action. This is secured by a deeper penetration of the guard piece into the path made by the outside of the roller, and as a consequence less wedging action when the guard piece impinges against the edge of the safety roller. Its disadvantages are that it becomes necessary to make the fork somewhat heavier to form this guard piece. This, by increasing the weight of the fork, increases the loss by impact. It must be borne in mind that the fork comes to a rest immediately on delivering its impulse to the balance, and remains in this condition until released by the roller pin on its return. The inertia of the fork is overcome by the balance striking it while at its greatest speed.

The difference between imparting motion to a piece by applying gradually increasing power or by sudden impact will be readily understood if you will imagine attempting to move a train of cars by bringing a locomotive at full speed against its rear end. This on a small scale is what a balance has to accomplish in imparting sufficient motion to the fork to provide the unlocking of the escapement. Another disadvantage in the double roller is that for an extent of 15 to 20 degrees at each side of the impulse the safety action does not take place between the edge of the roller and the point of the guard piece, but, instead, between the jewel pin and fork horns.

The advantages claimed for a table roller is that the safety action under all circumstances takes place between the guard pin and the roller edge. The horns of the fork may be entirely dispensed with without impairing its efficiency; also the fork may be made lighter than in the other form. The disadvantage is that the guard pin penetrating a less distance into the path of the roller edge will, when thrown against it, impinge with a more wedging action, and for this reason it requires more careful adjustment.

I will now ask your attention to simple instructions for the adjustment of a detached lever escapement. We will assume that the escapement being treated has been originally correctly designed, and has simply become deranged by accident or otherwise. First try the action of the escape-wheel tooth as it passes over the impulse face of the pallet stone. When it slides from the locking face both impulse faces should form a slight angle of the divergence, the locking corner only of the escape wheel being in contact with the pallet stone (Fig. 1). As it passes along the impulse face this angle should gradually decrease until the faces are practically parallel (Fig. 2), and, before leaving, the other corner only of the escape-wheel tooth should be in contact with the pallets (Fig. 3). As to the locking, there should always be an angle of divergence between the locking face of the escape-wheel tooth and that of the pal-

let stone, the locking corner only of the escape-wheel tooth being in contact with the locking face of the stone (Fig. 4). Drawing out the receiving stone increases the angle of impulse and draft. Drawing out the discharging stone decreases the angle of impulse and draft, and *vice versa*. This point should be steadily and carefully borne in mind.

Having secured the proper action of impulse, see that the locking is just sufficient for safety, the usual amount being three-quarters of one degree of a circle; also, that as the escape-wheel tooth is released from one pallet stone and another tooth drops to the other stone, that the drops on the receiving and the discharging are equal. This will be the case if the escapement has originally been perfect; if not, a slight alteration can be made by pressing one or the other stone toward the inside or outside in its slot, care being exercised that the amount of movement shall not be sufficient to derange the impulse or draft action. Now close the banking so that the instant the escape wheel drops the slide of the fork

shall strike the banking pin; now try the draft by lifting the fork slightly from each banking to see that it returns promptly.

Having thus secured the proper adjustment of the escape wheel and pallet action, we will proceed to the fork and roller action. First see that the guard pin is perfectly central with the fork slot, and upright. Now, by moving the banking screws adjust the fork so that when it strikes each pin there shall be just sufficient freedom to allow the edge of the roller to pass the guard pin. If it is found that in this condition the escape wheel will escape from one pallet stone and not from the other, swing the pallets on the pallet arbor, changing their position with the fork so that it will escape on both sides. Should it be found that it escapes on neither side, move the guard pin slightly forward and open the bankings. If it is found that after the escape-wheel tooth has dropped on the locking face it still slides up a distance on that face, move the guard pin backward and close the banking. You will now have what is known in watch factory parlance as "a watch banked to drop."

It will be necessary finally to determine whether the roller pin is at the correct distance from the center of the roller. To determine this, move the balance slowly

Is Your "Middle Case" Empty?

In watches, Mr. Jeweler, there are three classes necessary to serve all customers—to make up a complete stock. The high-priced watch, the *medium-priced* watch and the low-priced watch. The *medium-priced* watch is the *one important* class from the *profit* standpoint. That is why the

New England

THE WATCH FOR THE GREAT AMERICAN PEOPLE

fills the most important place in the jeweler's stock. It is built for the great mass of buyers of medium-priced goods. It is the highest grade, medium-priced watch made.

With both Ladies and Men New England Watches are sellers, but far more, they are without competition; they have the medium-priced field all to themselves; they are indispensable to *your* "middle case," Mr. Jeweler.

And there's another point of vital interest. We are talking New England Watches to the public, and are going to talk them convincingly again this Fall *through extensive advertising*. We are widening their already wide and exclusive field and making them more necessary to you. Frankly, the results are showing in doubled sales. But they will do better.

Remember, the jeweler handling the New England line will get the trade this Fall and this Christmas and ever afterwards. Advertising is going to do it.

If *your* medium-priced case is empty; if *you* don't handle the New England Watch, this is a mighty favorable time to take the matter up with us. Write us for details of our carefully worked out plans for bringing you business. Let us help you.

Address,

DEPARTMENT OF PUBLICITY

NEW ENGLAND WATCH CO., Waterbury, Conn.

until an escape-wheel tooth drops on the locking face, then move it slightly backward but not quite sufficient to unlock. Holding the balance in this position, grasp the fork with the tweezers and try the shake. If the roller pin is fairly embraced by both sides of the fork slot, this shake will be found normal. If it is not, it will be found excessive. In this case move the roller pin slightly forward until the desired result is secured. If it is found that the roller pin will not pass out of the slot of the fork, move the pin slightly backward. By no means attempt to remedy this defect by opening the banking. Finally open the bankings just sufficient to give about the same amount of slide on the locking faces of the stones that there is lock, and the escapement will be perfectly adjusted.

The Preservation of Drills.

WHEN a drill catches, the defect is generally attributed to all possible causes except the right one, which often is to be found in the defective construction of the tool, says a writer in the *Almanach de l'Horlogerie et de la Bijouterie*. A few remarks may not be useless if put in practice, for there are numerous artisans who need instruction.

When the extremity of a piece of round steel is forged, the form represented in Fig. 1 is obtained. It may at once be perceived that the diameter, according to the line *a b* is greater than the distance between the points *c d*, situated at the angle of the

shavings with less tendency to become blunt.

More advance will, therefore, be made than with the drill which works in both directions—which shaves, rather than cuts, the substance. The latter ought to have a point at its extremity, while the other, the one designed to cut in a single direction, has a small edge, as seen at *c*, in Fig. 2.

Besides, it often happens that the thickness of the edge of the drill is not proportioned to its length. Drills are often employed of about two and a half millimetres, which are only five, four, or even three-tenths of a millimetre in thickness. This thickness does not permit of obtaining a good result. The edge yields and does not cut well; or, what is more serious, it breaks and the particles detached are so fine that they are easily pressed into the substance. Every one has had experience of the difficulty and of the loss of time in extracting these small fragments.

The exact proportion for small drills should be one to three, and for large drills one to three and a half. A drill measuring 0.6 millimetre will, therefore, be 0.2 millimetre in thickness. Another designed to perforate a hole of 3.5 mm. should be 1 mm. in thickness. By observing these data tools may be secured with which work can be done rapidly, provided that the tempering and annealing have been properly conducted. Such drills will rarely break and will not be subject to become dulled quickly.

Horological Notes.

The clock at the entrance to Lord Ellesmere's estate at Worsley strikes 13 at 1 o'clock. The peculiarity is due to the last Duke of Bridgewater. Noticing many of his workmen loitering around after the noon hour one day, he made inquiries and was told they had not heard the clock strike one. So he had it fixed so that it would strike 13.

A watch that is attracting much attention whenever shown has recently been added to the New England Watch Co. It is called the "Skeleton" and has the dial and plates so removed that the entire movement is visible, crystals being used both in the front and back of the case. It is thus possible to look right through the watch and see the "wheels go round." The "Skeleton" is well made and is proving itself very valuable for a window display. It will probably be pictured in all the leading magazines this Fall as a feature of the national advertising campaign the New England Watch Co. is now planning. This advertising is interesting as showing what can be accomplished by judicious publicity. It is estimated that fully one-third of the people in the entire United States will be reached by it during the Fall and Christmas seasons.

William Taylor Peters, of Eureka, Kans., was married the other day in Fall River, Kans., to Miss Leo Blackman. They are now at home to their friends in Eureka.

Katherine and Cornelia S. Ludwig have succeeded to the jewelry business belonging to the Ludwig estate, Lexington, Mo., and are operating as the Ludwig Jewelry Store.

plane and round surfaces. For a drill worked by the bow, that is, designed to cut in both directions, it is quite advantageous that the edge should be taken on the greatest width of the piece of flat steel; that is, according to the line *a b*. If, on the contrary a drill is desired which shall turn in a single direction only, that is, designed to be worked by the wheel, it is necessary to commence by filing the round portion on each side, so that it shall not exceed the angles which are to be cut. It is in the neglect of these rules that sins are often committed.

For the second class of drills it is necessary to file according to Fig. 2, so that the edges *a b*, which are to serve for cutting, shall project. A tool thus prepared will respond to what is required of it, while if this detail is neglected it will catch, scarcely engaging in the hole, and if it is forced it will not move until broken. A drill of this kind may also be employed with the bow, provided the cutting edges are in good condition, as seen in Fig. 2. It is evident that such a drill, actuated by the bow, does not cut during its movement backward, but on the contrary removes the

THE COMMERCIAL MEANING OF "SERVICE"

THE WORD "Service" is being used very widely in business. It means more than the mere exchanging of goods for money; it applies to certain convenient methods of conducting business, which add to the customer's satisfaction without necessarily increasing the cost to him. Good products plus good service mean the highest efficiency. As applied to watches, such efficiency is here afforded.

(Answer to Question 656 Continued.)

THE NEW OR DIOPTRIC SYSTEM.
As recognized authorities give different values it has been deemed advisable at this point to collect the leading tables so that a comparison and choice may be made. Thus the following tables, by Jackson and Chas. F. Prentice, respectively, will be seen to differ from the foregoing by Landolt and from each other:

JACKSON TABLE.			
Number by dioptries.	Focal distance in millimeters.	Focal distance in English inches.	Numbers in old series.
0.12 (0.125)	8,000	315.0	...
0.25	1,000	157.5	114
0.37	2,667	105.0	100
0.50	2,000	78.7	72
0.62	1,600	63.0	60
0.75	1,333	52.5	48
0.87	1,143	45.0	...
1.00	1,000	39.37079	10
1.12	889	35.0	36
1.25	800	31.5	30
1.37	727	28.6	...

5.0	20.00	2	1 31-32
2.5	40.00	1	63-64

A careful study of the above tables will enable the reader to see that while the dioptric values always agree, the inch values and "old system" numbers vary considerably, making one more point in favor of the dioptric system. Furthermore, there is a uniform difference between each division of the dioptric system: that is, one-eighth .125, or $\frac{12\frac{1}{2}}{100\text{ths}}$ of a meter difference, 0.125, 0.25, 0.375, 0.50, etc. But in the old or inch systems there is no uniformity in the graduations; for instance, between a seven and eight inch lens there is a 1/56 difference, while between a 11 and 12 inch lens there is a difference of 1/132.

In studying the various tables it must be kept in mind that the "old inch system" is not the same as a new inch system would be. This accounts for the fact that a 0.25 dioptre lens is sometimes marked a 144-inch and at other times a 160-inch. The old system would have claimed it to be a 144-inch lens because it had a radius of curvature of 144 inches, whereas by taking into consideration the refractive index the new method of estimating would be to divide the 0.25 dioptre into 40 to get the inch value, which equals in that case 160. It must also be remembered that slight fractional variations are neglected; thus a 3.25 dioptre lens is really a $12\frac{8\frac{1}{2}}{100}$ -inch, but the fraction in this case is dropped completely;

in other cases, if it comes near a quarter or a half, it is called so; that is, a 16.00 dioptre equals really a $2\frac{7\frac{1}{2}}{100}$, but is called a 2½-inch lens. These differences make so little practical difference that they may be treated thus with impunity. Employ the dioptric system for numerating and there will be no irregular fractions like the above to deal with, although even in the dioptric system we often call a meter 40 instead of 39.37 inches, and here again it makes little or no appreciable difference in ordinary calculations, but in most cases the writer prefers the use of the more exact equivalent, i. e., 39.37 instead of 40, if the calculations are being made on paper, but where they are made mentally use 40 by all means.

Q.—(657) Which of the four synonymous terms, dioptre, diopter, dioptré, and dioptric, should be used to express the unit of measurement of the metric system of numbering lenses, and why?

A.—With the advent of the dioptric system an unfortunate circumstance crept in that could easily have been avoided at the time, but which has now reached such proportions as to make one hesitate before attempting a reformation. The fault was that no definite form was given to the spelling of the unit, the very cornerstone of the dioptric system itself. Various forms were used, and now no thought seems given the subject by even well-known writers, who use indiscriminately diopter, dioptré, dioptrie (as a noun) and dioptre. Now all may be considered variants of the same word, but one must be best, and at any rate one should be adopted so that a uniformity would exist. We fully realize that usage is the supreme factor in establishing the spelling of any word, and all that even the best dictionary can do is to record what spelling receives the most usage. In the instance of the dioptric unit, however, one form is used about as much as the other, and therefore to settle which is the best we must take into consideration not alone how many use it, but who are or are apt to be the more carefully scientific writers.

Selecting from a wide range of works the following tabulation was made which seems to give a fair idea of how the term is used:

Dioptre is used by the Ophthalmological Society; Landolt, "Refraction and Accommodation of the Eye"; Bates, "Ocular Refraction and the Shadow Test"; Tscherning, "Physiologic Optics"; Prentice, "Ophthalmic Lenses"; Swanzy, "Diseases of the Eye," and Valk, "Errors of Refraction."

Diopter is used by Knowles, "Encyclopedia—Dictionary of the Ophthalmic Sciences"; Cross, "A System of Ocular Skiametry"; Henderson, "Lessons on the

Optical Department.

Eye"; Thorington, "Refraction and How to Refract"; Rainey, "Eye Strain in Health and Disease"; Brown, "Opticians' Manual."

Dioptré is used by Lockwood, "Principles of Optometry"; Weeks, "Diseases of the Eye"; Tiffany, "Anomalies of Refraction"; Maddox, "Ocular Muscles."

Dioptric is used (as a noun) by Roosa, "Defective Eyesight"; "Century Dictionary."

Thus the vote taken of the above authorities shows: *Dioptry*, seven; *dioptré*, six; *dioptré*, four, and *dioptric*, two. The "Standard Dictionary" mentions all four terms so it would not change the result if added, yet it, as well as the "Century," gives "dioptré" as a "leveling instrument consisting of a plank, etc." Thus *dioptré* is a term with a double meaning and should be eliminated from optometrical matter, as it is better suited to describing the leveling instrument. *Dioptré* is not a good form, as it is too apt to be confused with the adjective. This leaves *dioptré* and *dioptry*, and as *dioptré* is merely the French form of *dioptré*, the field seems won by *dioptry*.

Not only the number but the weight of authority also favors the form *dioptry*, and it is high time the proper term was proclaimed and employed. The plural for *dioptry* is *dioptries*, thus 1.00 *dioptry* or 3.00 *dioptries*. The abbreviation is D.

Q.—(658) Which of the terms, *dioptric* and *dioptral*, should be used as the adjective from the noun *dioptry*?

A.—There exists some confusion in relation to the form of the adjective. Prentice used "dioptral" as the adjective, and says: "The choice of this adjective would seem justifiable, since the unit 'dioptry' has been chosen in distinction to 'dioptric,' which, though related, has another significance. Thus, a 40-inch telescope lens is a member of a dioptric system, whereas a one-dioptry lens is specifically a member of the dioptral system. In the English language we have an analogy to *dioptry* and *dioptral* in the spelling of ancestry and ancestral."

So not only does the form of the noun demand attention, but the form of adjective is also unsettled, though *dioptric* has gained such a firm hold as the adjective that it would be difficult to establish *dioptral* in its place, even though it were proven that *dioptral* was the more appropriate term. No such advantage lies with the noun, however, and in its case, propriety and uniformity should be maintained and *dioptry* used in all cases where reference is made to the unit of measuring optometrical lenses.

Q.—(659) What systems are employed in measuring and numbering optometrical prisms?

A.—Three systems are in use, viz.: Prentice's method, Dennett's method and a method based upon the angle of deviation of the two faces of the prism.

(To be continued.)

Harvey W. Freeze, Brownsville, Ore., is closing out his stock and preparing to go east. Mr. Freeze has arranged to put in a year under Chicago and Boston tutors in post-graduate work in ophthalmology, after which he will return to Oregon.

A Means of Time Saving When Refracting.

By H. P. LAKIN, M.D., in the *Ophthalmic Record*.

AFTER placing the correction obtained by use of the test lenses, stenopaic-slit, ophthalmoscope, retinoscope (which I prefer), or any other means, in the test-frame upon the patient's face, it has been my custom to increase and then decrease first the spherical and second the cylindrical portion of this combination, and finally change both at the same time by means of the cross-cylinder.

At first I used lenses taken out of the test case and replaced again. As these were often needed in the frame, after a time I got extra test-lenses + 0.25 D. and - 0.25 D. spheres and cylinders. Several years ago I added a plano to be placed between the other two, thus using three test-lenses held in the hand and passed before the correction in the test-frame. This Summer I had Messrs. McIntire, Magee and Brown, of this city, make for me, in both

USEFUL LENS COMBINATION FOR TESTING.

spheres and cylinders, sets of the two lenses and planos fastened in one handle. These are of the strengths 0.12 D., 0.25 D. and 0.50 D. They have proven very convenient and great time savers.

Let the patient wearing the combination obtained by any means read the lowest line possible on the test-card. Then taking the spherical set, pass in succession before the correction in the test-frame the plus, plano and minus lenses, having the patient read with each, giving an indication, according to which of the three gives best vision, to increase, let alone or decrease the spherical portion of the combination. Make the alteration indicated, and so continue until the plano gives best vision, showing an indication to leave the spherical portion unchanged. Then taking the cylindrical set, hold it so that the axis of the first lens is coincident with that of the cylinder in the test-frame and pass the three test-lenses before it in a similar manner.

Make the alteration indicated and so continue until the plano gives best vision, indicating no further change of the cylindrical portion. Then take Dr. Edward Jackson's cross-cylinder (which increases the strength in one direction and decreases that at right angles to the former) and proceed as usual with it until no change is indicated by this means. Now the correct combination has been obtained.

The method of increasing and decreasing the strength of the sphere and cylinder, after the combination has been placed in the test-frame, is in very common use by oculists. I merely call attention to the convenience of having the three test-lenses set in one handle instead of taking each one separately from the test-case when needed

and then replacing it, and to the increased rapidity of testing resulting from their use. The device of my colleague, Dr. J. N. Rhoads, which works by first using a plus, then a minus and finally neutralizing to obtain the effect of a plano, is on the same principle, but is much more complicated in its construction.

A Case of Defective Eyesight Treated Without Glasses.

DR. EDWARD G. LORING, for many years before his death a leading eye specialist in New York, had plenty of humor, says the *New York Sun*.

One morning a club friend of his of bibulous habits made his appearance in the doctor's consulting room complaining that his eyes were failing him and expressing fear that he must prematurely take up the use of glasses. He had not connected his defective sight with his alcoholic propensities.

Dr. Loring put him through all the paces of an oculist's examination, showed him alphabets of different sizes, made him peek into all kinds of mysterious holes, peered at his eyes through many uncanny looking instruments, asked him innumerable questions and finally gave his opinion as follows:

"Well, Roddy, you won't have to wear glasses yet a while. Nothing's the matter that we can't cure. Take this prescription and follow its directions. Don't open it until just before you are going to your dinner at the club," and he wrote out and handed over the prescription.

"Thanks, awfully, old man. You don't know how much you have relieved my mind," said Roddy. "How much is it?"

"My fee for examination and prescription is \$20," said the doctor.

Roddy opened his eyes a little, but handed over the money and went out, his respect for his friend greatly increased as he sized up the crowd in the anteroom and figured in his mind what they would amount to in dollars.

That evening as he sat ordering his dinner with a cocktail before him he opened and read the prescription, which ran as follows:

R One cocktail per day. E. G. L.
Roddy took his cocktail and never tired after that of offering to bet that he had paid more for a single drink than any other man in the room.

J. Herbert Neve, an optician formerly at 15 Temple Place, but now at 367 Massachusetts Ave., Boston, was fined \$100 in the Municipal Court, July 13, for practicing medicine without registration. The State Board of Registration in Medicine received complaints against Neve, it is sad, and as a result a plan was prepared to send a man with no apparent physical defects to the office of the doctor. After an extensive examination of the man's heart and other parts of his anatomy, according to the testimony, he was told that he needed a pair of spectacles which would cost him \$11. This was reported to Dr. Harvey, of the State Board, and the conviction before Judge Parmenter followed.

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

How the Jeweler Can Meet Competition of the Mail Order House.

MERCHANTS have been so slow in saying anything to their customers, either personally or in print, about mail order houses, for fear of advertising the fact that the mail order house has had ample opportunity to pound into the consumer all its strong arguments without opposition, and now the retail merchant must not only educate his trade to the advantage of trading at home, but must advance a world of good reasons to overcome the sentiment already formed in favor of the mail order house.

The time has come for the retailer to begin an active campaign against the mail order houses. His future business depends upon it, also the future prosperity of his town, for there will be no need of small stores if the mail order houses get to handling the business of the country, as they expect to handle it through the rural delivery and parcels post.

It will be the object of this series of articles to give the retailer ammunition with which to fight the common enemy. There are many reasons why your neighbor should trade with you, but you seldom tell them. The mail order house never stops drumming ideas into your neighbors, and you must learn to do likewise. Make use of this ammunition in your circulars and newspaper advertising. Keep everlastingly at it and you will soon see results. It will not hurt the advertising of most merchants to say a few lines less about staples and to put in several good paragraphs about mail order houses, or even to devote all the space to the fight for awhile, if good judgment dictates such a policy, or if there is something particularly appropriate offered.

One line of business must be quick to take up the good things other lines have found, and thus work every good idea as hard as possible, while it is fresh. How is the following idea likely to work with your neighbors, if you carry it out right?

A Kansas jeweler recently adopted a novel method of showing the advantages of trading at home, and he states that his thorough advertising of this one idea has caused a wonderful falling off in the amount of mail orders going out of his town.

He pinned a slip of paper to the back of a dollar bill, and on the top of it was printed the request that every person receiving the bill should sign his name to the slip, to show how often it changed hands.

In two weeks that bill came back to him again, and it had changed hands 24 times. He got out a circular telling of the experiment, and gave a list of the names signed to the slip. He tried to place one of these circulars in every house in his section of the country. He also received the aid of the publisher of the local paper, who was only too glad to show the people the advantage of keeping their money in the community. There was a long article in the local paper. The idea appealed to the people. It was a good example of what one dollar would do in the way of keeping money in motion. This was easily appreciated.

You can do this for yourself. Your brother merchants will help you, and while you may not be able to show such a large list of transfers, you can make a good showing with a little effort, and the argument is good.

Suppose you then start your circular by calling attention to the great scarcity of money a few years ago, when every one was hoarding gold on account of the fear of free silver. It made money hard to get in all parts of the country. Sending money out of the county for goods which can be bought at home has the same result, except that it makes plenty of money where the big mail order houses are located. It makes it scarce at home all the time, and there is less to pay debts with and to buy with. The story of what a dollar did may follow such an argument, and then have a paragraph showing how little help that dollar would have been to the community if spent with a mail order house. This would make a circular which would cause thought. It is an argument which should be brought to the attention of every person in every community. Try it.

F. A. P.

(To be continued.)

Anent the Business Letter.

BRUSKNESS and brevity—that is the general idea of what constitutes a business communication. As far as it goes, it is correct; but the brusqueness must go beyond curttness and the brevity beyond ambiguity. A gracious word or two, or an explanatory clause, will often place in an entirely different light what might otherwise impress the recipient as rudeness or obscurity.

In order to avoid the latter possibility it is best, before dictating an important letter,

to make notes of the points to be covered, or even a rough draft of the entire letter. Clear thinking is absolutely essential to clear writing; and the average business man cannot think clearly while a typist sits chewing her stylus in uneasy anticipation of the next attack upon the paper.

It is perhaps superfluous to state that a business letter calls for an immediate reply. If it is impossible to reply in full, send along an acknowledgment of the receipt and an assurance of early attention. When the reply is ready, make it clear and definite; arrange your statements in systematic order.

It is a pleasing fact that the majority of business men are becoming as particular about their writing paper as the daintiest debutantes. They want the best, and price is a secondary consideration. The use of cheap and nameless stock is supposed to have about the same effect upon the recipient, as if the writer were to make a personal call in a ragged coat and soiled linen.

A Novel Style of Price Card.

IN decorating a show window much depends on the method of pricing the articles. In this question of selecting price cards two prime factors enter which must, of course, be religiously adhered to. One is that the cards be of sufficient size to permit of figures large enough to be read easily. The other is that those figures or price denominations be in characters free from any ornamentation that tends to hide the numeral.

A valuable *additional* advantage over and beyond the two above-mentioned cardinal points may be gained by having the most artistic, novel and attractive price cards available.

If specially attractive price enumeration is desired, the old method of using crisp new greenbacks on the goods is very effective. But often the even dollar or dollars are unavailable on account of lower denominations figuring in the price. In such cases a very novel and attractive effect is gained in the following way: Take slightly larger cards, and on a spare space, with the aid of a pot of liquid glue, stick the equivalent in coin. For instance, if 35 cents is required, glue a quarter and a dime on the card.

Of course, fresh, bright, newly minted specie are necessary to give a truly brilliant effect. You can get them from your bank.

Storekeeping Department.

An Attractively Furnished Jewelry Store in Columbia, S. C.

THE attractive and cleverly designed jewelry establishment illustrated herewith is located in Columbia, S. C., where the enterprising owners, Sylvan Bros., enjoy a prosperous business. Seventeen years ago, Gustaf and Johannes Sylvan emigrated to this country from Höganas, Sweden, the place of their birth, and in 1897 began in Columbia the business which has since been considerably developed by dint of energy and enterprise.

The present quarters are in the concern's own building, known as the Sylvan building. The location is an ideal one, the frontage on Main St. being 34 feet and that on Plain St. 75 feet. The main entrance is just on the corner, giving the store a display window 14 feet long on Main St. and another 60 feet long on Plain St. These windows, moreover, have a depth of eight feet, and in them are fitted show cases, between which are erected large columns trimmed with plate glass mirrors, making the general effect very beautiful.

The perspective of the interior of the store presents a striking view, with the long graceful plate glass show cases and wall cases extending far back to the rear. The doors, fixtures, etc., are of mahogany. The floor is of mosaic tiles. The ceiling is paneled with heavy plaster beams in squares, with a 16 candle-power light in the center of each square.

The opening seen in the center of the ceiling forms a kind of balcony and is 10 feet wide and 35 feet long. Here is located the workshop, the ceiling of which is fashioned in a manner similar to that of the store below. Three massive brass chandeliers are suspended from the upper

ceiling and extend down through the opening. This workshop is well lighted by day and night, having eight windows for the admission of light and fresh air.

The machine room, back of the workshop, has two windows. In the machine room is

a two horse-power motor for running the polishing machine, rolling mills, sand blast, lathes, etc.

Altogether the establishment is so complete and handsomely equipped that the owners have just reason to take pride in it.

[Answers are also solicited from our readers to the questions published on this page.]

QUESTION No. 1622.—Tin Plating.—*I have some copper coffee pots which I want to plate on the inside with tin. Kindly tell me how to make such a solution for an electric current.* T. P.

ANSWER:—Make your solution with phosphate of soda, two ounces; chloride of tin, one ounce; water, one gallon. This solution can be poured into the cleaned copper pots and connected with the current; bob into it a tin anode. This requires only a light current, and the solution of tin must be kept at full strength by adding a saturated solution of chloride of tin.

QUESTION No. 1623.—German Silver Alloy.—*I am about to make a line of German silver candlesticks, and wish you would give me the composition of an alloy that will work well and not tarnish very easily.* J. G. S.

ANSWER:—German silver varies very much in composition. One very good kind that will polish well and which is useful for nearly all sorts of articles, is composed of copper, 50 parts; zinc, 25 parts, and nickel, 25 parts. The alloys vary, according to the use to which they are to be put; from 50 to 60 parts copper, 19 to 31 parts zinc, 13 to 18 parts nickel. A very good substitute, very much used, which gives a silver white luster and suitable for artistic purposes, called argazoid consists of: Copper, 55 parts; zinc, 23-198 parts; nickel, 13-191 parts; tin, 4.035 parts, and lead 3.544 parts.

QUESTION No. 1624.—Reclaiming Metal from Dross.—*How can I reclaim the metal in tin dross without a great deal of heating. I burn down the tin and britannia dross several times, but it requires so much heat that it burns the metal so that it is unfit to use again for good castings. If there were some method of regaining this metal without overheating, a large saving would be the result. I know many manufacturers who are in the same fix as myself.* R. M. D.

ANSWER:—Tin and britannia dross may be treated so that all the metal therein is separated without overheating and burning. The lumps and cakes of dross should be melted down in the regular way, and all the black appearing dust should be placed in what the miners call a stamp. This is an iron round bottom pot, which has a cover that is secured with screws or clamps to the top of the pot. Through the center of the cover is a hole through which runs an iron rod. This rod is connected with a running shaft above, and an iron ball is secured to the end in the pot. The pot is half filled with the dross and the shaft is started, arranged in such a manner so that the ball will pound up and down, thus pulverizing the dross into a fine powder. The result will be that in a little while most of the metal will

gather at the bottom of the pot. This pulverized mass can be separated by having a blower or fan blow away the dust, and the metal will remain. This method is much used in Germany for the separation of the dross from the metal, and the result is that the metal can be used again for good castings.

QUESTION No. 1625.—Hardening Britannia Metal.—*How can I temper or harden britannia metal?* H. B. M.

ANSWER:—Britannia can be hardened by merely subjecting the metal to a degree of heat, slightly below the melting temperature of the metal. This is usually done after the rolling or blanking, and in a muffler or on an iron plate. After the heating the metal should be cooled as quickly as possible. If there is only a sheet this can be left to cool, but if a stack of blanks have been heated it is best to separate them after the heating so that the cool air will pass over them.

QUESTION No. 1626.—Lathe Attachments.—*How and what attachments to a lathe are necessary to mill out true the hole between the two plates of a watch that contain the winding pinion and arbor? I have Universal head, slide rest and wheel cut attachment, but the milling cutter must of necessity be run at a right angle of 90 degrees to the lengthwise of the lathe bed. What attachment must the milling cutter be held in, the hole to be milled out with the plates screwed together, of course?* R. P.

ANSWER:—There is no attachment made to any American lathe commonly for sale, by means of which you can perform the operation which you describe in your letter. The original Hopkins Pivot Polisher, made in the year 1872, might readily have been adapted to your use, but it is questionable whether one could now be obtained. The next best which may be adapted is the Webster-Whitcomb milling tool made for lathe No. 2, but such adaptation will require considerable work. A slide rest with three motions, one of which is a perpendicular one, would do the business with the least alterations. A face plate with a vertical slide may also do the work with some minor attachments. A tool similar to this is sometimes used in the factory.

QUESTION No. 1627.—Making a Dust Bag.—*What do you mean by "powder from a dust bag?"* L. X.

ANSWER:—A dust bag is a bag made of some coarse cotton web or other texture that will allow emitting of marble powder or even some coarser dusty substance when subjected to friction or heating.

QUESTION No. 1628.—Puzzling Watch Variations.—*I have repaired, recently, for one of my customers a 15-jewel move-*

ment which I have regulated by carrying same in my pocket and it did not vary more than one minute per week; yet, when my customer carries the watch he complains that it runs eight minutes fast per week. He brought back the watch for the third time, always with the same complaint, and I have carried it again, and it does not vary more than one minute per week.

L. D.

ANSWER:—It may be inferred from the tenor of your letter that the 15-jewel movement is claimed to be an adjusted one. If so, some of the adjustments may be out of order. We would suggest that a third party carry the watch two days, or so, and note the variations; next inform yourself well in regard to the use of the watch by the individuals who have carried it. This may lead you in the shortest manner to the detection of the cause of the irregularity in the running. In case this plan should prove unsuccessful in giving the desired information, a thorough examination of the adjustments is the only alternative. Such an examination ought to include a test for magnetism. Some matter was published June 27, on p. 97, concerning a similar experience, which we suggest that you read.

The Melting of Small Beads of Gold or Silver.

(Translated from the Deutsche Goldschmiede Zeitung.)

THE ordinary melting of small beads of gold or silver on a piece of charcoal by a blowpipe may be a very convenient operation when done on a small scale, but when the manufacture of such beads or pearls is to be done in quantities a more comprehensive system has to be employed. This is done as follows: Gold or silver wire, after having been alloyed with a small proportion of chemically pure zinc, is drawn into a thin wire, which is coiled in spiral form around a thin wire, preferably of steel. When prepared in this manner it is cut into single coils, representing small eyelets, by some easily constructed pair of nippers which will work automatically. These eyelets are then boiled in a 15 per cent. solution of borax until the water has been evaporated, by which operation all of them have been covered equally with the borax.

The bottom of a graphite crucible of liberal size is to be covered with charcoal dust to the thickness of about 2 cm., which is to be pressed down to a level. This surface is to be covered with a number of eyelets in such a manner that they do not touch each other. After covering these with a second layer of charcoal dust and eyelets, these operations are to be repeated till the crucible is moderately filled.

An experienced melter will be able to do the rest and see to it that these eyelets do not run together, but are heated sufficiently to produce beads which will all be of an equal size and will only need pickling to be used in the manufacture of the best filigree jewelry.

Herbert Hakan, who for the past two or three years conducted a jewelry and loan office under the name of the Queen City Loan Office, Sedalia, Mo., has discontinued business.

THE CONNOISSEUR

Devoted to Art Pottery, China, Marbles, Bronzes, Cut and Decorated Glass Ware, Bric-à-Brac, Lamps, Art Metal Wares, Fancy Goods and Kindred Lines.

A British Criticism of Our Customs Laws Relating to China and Pottery.

CUSTOMS laws of the United States are declared by a contributor to a recent issue of the *Pottery Gazette* of London to be unsatisfactory to the pottery trade. He holds that the administration of the laws is not fair to the American importer. The writer also makes a suggestion that English potters must make feldspar china if they desire to compete with Germany's cheaper products. The English writer's views are set forth as follows:

"The United States Customs Law, from the point of view of jurisprudence, in a very unsatisfactory condition. It states that the goods should be invoiced at market value, and the decision of the appraisers has been that this means that the goods must be entered at such prices as they are sold in the home market. An importer buys a certain quantity, and in many cases very large quantities of goods. Manufacturers in this trade doing a large business to the United States know very well that orders given by large houses in the United States are for very large quantities, and are in most cases supplied cheaper than similar goods would be for the home trade where no house is able to buy those quantities. How can it be expected that an American house who purchases goods in the European market can know the prices at which the same manufacturer would sell to a home trade house?

"When information is got by the appraisers that certain articles are sold in the home trade at a certain higher price, the goods on entry are raised; and here is the injustice of the law, that for every 1 per cent. the goods are raised there is a fine inflicted automatically of 1 per cent., as you state, and no proof that the purchase is a legitimate one, and no testimony on the part of the manufacturer that these are the proper prices which he receives and that he gets a fair profit by these transactions, are of any avail when it comes to a re-appraisalment.

"For some years past the American Manufacturers' Association have, as you correctly state, made complaints to the United States Custom House that goods are undervalued by many Continental manufacturers, and the state of the law has been used as a lever for thus making imports more difficult, and many goods have been raised and importers have been fined for what are perfectly legitimate purchases.

In the French dinner ware trade there has been made a positive scale by the United States Custom House under which nothing can be imported, and whatever a manufacturer may be able to do in selling goods below this price at a good profit, the goods

are raised when they come to the Custom House at his price, and the importer is fined. If such actions are indorsed by the trade paper of the potteries it can only lead to British manufacturers being treated in the same manner, for the United States manufacturers find more competition among British earthenware manufacturers than among German or French china manufacturers.

"The important trade to the United States is done in the potteries by comparatively very few houses, who are known to everybody. You only need to inquire from them whether their prices for their large United States orders are not considerably below any such orders they can take in the home trade, and whether they would consider it just if their goods were treated in a similar manner on arrival, and what injury it must do to that trade if such actions would be considered correct.

"As to the question of this action having any material effect upon the largely growing German trade and a beneficial effect upon the trade of Longton, the sooner British manufacturers are alive to the actual course of the large growth of the German pottery the better it must be for our trade here. The growth of the German potting trade is entirely due to the manufacture of feldspar china, which has many facilities; the materials are considerably cheaper than even those of English earthenware, the glaze is out of proportion less, and, as compared with English china, the materials and glaze combined are about one-third of the cost. The firing comes considerably cheaper. The molds in Germany are practically one-quarter of the cost, and this is all apart from the cheaper labor.

"Many articles can be manufactured in feldspar china cheaper than they can in earthenware, and if England wants to keep a great part of this trade for the future there is only one way, and that is by establishing feldspar china potteries here, with up-to-date methods; but to indorse the action of the United States Potters' Association, and by this means to get inconvenient competition out of the way, is a method which will only recoil upon themselves."

Carl Schwartz has returned to Merton A. Gaskell's store, Rochester, Minn., after a vacation spent in Winona, Minn.

Thomas A. Baden, lately with Pyl & Wyckel, Kalamazoo, Mich., has bought the business of Randall A. Buckmaster, 152 St. Burdick St., with whom he was formerly associated. Mr. Baden is the watch inspector for the Michigan Central, Grand Rapids & Indiana and Lake Shore railroads.

Some Interesting Facts About the Exposition at Reichenberg, Bohemia.

IN a recent report Consul-General McFarland describes the Reichenberg Exposition, which is now in progress in that Austrian city, saying in part:

"In its setting the Reichenberg Exposition is certainly unique, surrounded as it is by mountains, with a large artificial lake. It brings together for the first time the varied products of north Bohemia, or the so-called Deutsch-Böhmen. The exposition was intended to cover only the products of the German or Austrian born people of this section, the Czechs or Bohemians being strictly excluded. This has naturally shut out some of the prominent local firms, such as the glass works conducted at Neuwelt by Count Harrach, who is a Bohemian. The line was also drawn against American, German or other foreign concerns whose products compete with those of Bohemia, the idea being to exploit only the products of the Austrians who have built up the manufacturing industries of north Bohemia. It is also true that some prominent Austrian firms, actuated partly by motives of economy but chiefly by fear of imitation of their especial products, are not represented. At the same time the exposition is fairly representative, and the exhibits show collectively and for the first time the beautiful rugs and textiles, the glass in its raw state and its perfect utilization, the Gablonz specialties in imitation stones and jewelry, and the porcelain and china from the neighborhood of Carlsbad.

"Notwithstanding the strict rules, and under cover of Bohemian agencies, quite a number of American exhibits, somewhat disguised, have crept in. The American typewriter and cash register are everywhere, the Singer Sewing Machine Co. has a complete exhibit, American roll-top desks and office furniture are exhibited through a local firm, the Northrop loom is shown by the Austrian Textile Works, and American agricultural machinery, exhibited through local agents, of course, dominates that section. Of all the exhibits, however, excluding Bohemian glass, the textile section is the most interesting, for here are found the fine cloths which seem to reach only the European markets and are celebrated in Vienna, Dresden, Paris and London, but which appear to reach the American markets only as the finished goods of some foreign modiste, with all charges added. In this section are also exhibited the hand-woven rugs and tapestries, rivaling Turkey and Persia.

In glass, both cut and decorated, no such collection was ever before brought together.

Working Model of Traction Engine Built by a Missouri Jeweler.

THE recent unveiling of the statue of the founder of the Baldwin Locomotive Works, Philadelphia, recalled the fact that Mr. Baldwin began life as a manufacturing jeweler, and built his first engine while engaged in that business, later going into locomotive building. That Mr. Baldwin was not the only jeweler whose talents have been turned toward engine building is apparent from the fact that S. M. Coffman, a jeweler of Braymer, Mo., recently completed a most unique working model of a traction engine containing 3,100 pieces, which has attracted considerable attention locally, and has been the subject of some comment in technical papers.

An illustration of the engine is shown

S. M. COFFMAN AND HIS MODEL OF A TRACTION ENGINE.

herewith, together with a portrait of Mr. Coffman, which will give an idea relatively of the size of the model. Mr. Coffman recently described his work in making this engine in an article contributed to *Popular Mechanics*, as follows:

"Back of my jewelry store and optical parlor, in the city of Braymer, Mo., I have fitted up a little factory where every evening I spend a couple of hours in manufacturing horological tools of my own invention and doing model work. Here I built my complete working model of a traction engine, which in every detail is like the big 12-horsepower engines of its type. The equipment of my factory includes a 5-horsepower gasoline engine, a 2-kilowatt compound generator, two motors, a screw-cutting lathe, two watchmakers' lathes, and a number of other special machines, such as milling and grinding machines of my own design and make.

"My work in this line began with a great desire to become a finished mechanic. Fourteen years ago I made a watchmaker's bench, composed of 2,500 pieces, and lathe, and began repairing watches and clocks.

From that time I have been a reader of the best horological and scientific papers, but I never worked as an apprentice in my life.

"In building this traction engine model I experienced many difficulties. It is nearly all built-up work, the three elbows in the steam pipe being the only castings used. It is built to the exact scale of a 12-horsepower engine—1½ inches to the foot, or ¼ size—and is composed of 3,150 pieces—882 pieces in the two rear wheels, 41 pieces in the differential gearing, 30 flues, water and steam gauges, governor, safety valve, lubricator, pump and whistle. Many special tools were required in its construction, all of which I made on the lathe.

I could not procure a glass tube 1-16 inch in diameter for the water gauge, and so had to draw one out of a ¼-inch tube. The engine that this model represents is

set to carry 130 pounds pressure to the square inch. It would have been much easier to have made this steam gauge register 130 actual pounds to the square inch, but it was not desirable to carry such a high pressure on the model, so I concluded to increase the registration as many times as I decreased the size of the gauge, which is ⅛, or to about the size of a dime. This gauge is of the drawn-tube type, and the tube is drawn very thin. The internal diameter is 1-1,000 inch by 3-32 inch, and even then it was necessary to use compound rack and pinions, so when the gauge shows 130 there is 16¼ pounds actual pressure, and the pop valve acts. The differential gearing was quite a difficult piece of work, as I made the milling machine and wheel cutters to make all of the gears. The time occupied in building the model, including the many dies and gigs, was about 10 months, working at odd times and after lamplight."

Albert E. Weber, of Winnebago, Minn., has removed to Lakefield, Minn., where he will engage in the jewelry business again.

DOULTON WARE SHOWN
IN NEW QUARTERS.

THE new show-rooms of Wm. S. Pitcairn, at 44 Murray St., New York, have been fitted up and are now among the most spacious and most handsome to be seen in the pottery district. Two floors are occupied in the display of Royal Doulton china and earthenware, and the third floor is used as a packing room. Mr. Pitcairn has recently been receiving samples from England adding to the existing large display. In the service plates and tea sets the variety is greater than ever. The reproduction of those patterns whose popularity has stood the test of generations comprises a considerable part of the exhibit, and to these lines are added the best of the new designs. One of the novelties which was introduced several years ago and has maintained its hold on a considerable part of the trade is Dutch earthenware, coming in green and yellow shades with typical scenes from the land of dykes. The "Automobile," "Friar" and "Isaak Walton" specialties have been selling well in the last season and new patterns are being added to each.

NEW EFFECTS IN
LIMOGES CHINA.

QUITE a number of new designs in Limoges china have recently been received by Bawo & Dotter, 26 Barclay St., New York. In china finished in an ivory body and ornamented with heavy flat and relief gold there is an especially wide variety of fancy pieces, including plates, bowls, chocolate pots, sugar and creamers, and cups and saucers. A dainty set that is much admired has gold borders in lace effects interspersed, among which are roses of soft and delicate effects. Some plates have wide and heavy gold borders, while just inside the outer band are quite soft and delicately colored circlets.

COOK POTTERY CO. AC-
QUIRES NEW PLANT.

THE Cook Pottery Co., Trenton, N. J., recently arranged with the Colonial Trust Co., of Pittsburg, for the control of the plant of the Pennsylvania China Co. at Kittanning, Pa. The Cook Co. will operate the newly acquired plant as a factory for its Western trade. It is expected that work will be resumed at the Kittanning pottery in a week. It is expected that about 400 persons will be employed, several of whom may go from Trenton. The Cook Pottery Co. now has 27 kilns. The officers of the company are: Charles Howell Cook, president and treasurer; F. G. Mellor, vice-president, and James H. Mulheron, secretary.

Warning to the Trade!

Retailers are being called upon by a man who is selling twenty-one chains on a cloth for \$18, with swivels stamped "S. O. B. & Co.," and with a duplicate tag of ours bearing our trade-mark, attached to same. The chains are nothing more or less than brass shaded over, and will not stand acid for a single moment.

Jewelers with any experience ought to be able to discover the difference between a finished article and a rotten one.

Anyone who has been swindled by this man will please notify our house, as we want all the evidence possible, and we will do the rest.

Localities where goods have been disposed of are Pittsburg, Allegheny, McKeesport and surrounding towns.

We have two chains now in our possession that were sold by this man.

S. O. BIGNEY & CO.

We give you below an exact copy of an assay of chains manufactured by the leading chain makers of the United States.

Illinois Watches

Made to be sold by live, progressive, American Retail Jewelers who realize the credit to be gained from selling reliable, accurate time pieces.

Protection to the Retail Jeweler is the "watchword" of The Hamilton Watch Co. and The Illinois Watch Co., and every effort will be made to restrict the sale of these watches to the Legitimate Retail Jeweler.

OLD RELIABLE W. & S. B. ★

We extend our greetings to the members of the American Retail Jewelers' Association and the American Association of Opticians, as they assemble in convention.

In view of some matters that are to be considered at both conventions, we offer the following suggestions:

Don't waste valuable time reflecting on the inroads made in your business by Department Stores and Retail Mail Order Houses. Buy the Old Reliable line and avoid this kind of competition. Our Old Reliable W. & S. B. ★ 1-10 and Globe Filled W. & S. B. ★ 1-8 chains are not sold to either Department Stores or Retail Mail Order Houses.

Bunch your buying. If you buy a little here and a little there you gain the regard of no one and your account has no value. Concentrate your purchases on the Old Reliable line and participate in the opportunities offered by our premium plan.

We invite your inspection of Old Reliable goods at our booth in the exhibition hall. We shall have some special things to show you and a very interesting booklet for you to read.

Old Reliable W. & S. B. ★

Let us send a selection package through
any jobber you may designate.

"We never follow the Fashion, the Fashions Follow Us."

MAURICE L. POWERS.

JOSH W. MAYER.

SPECIAL.

WE extend to the Jewelers of this country a most cordial invitation to our FOURTH ANNUAL EXHIBITION of Diamond Jewelry, to be held in our offices between August 13th and 18th inclusive.

During the past few months we have specified in this journal what this remarkable display will consist of and we desire to say that every statement will be fully verified by a wonderful exhibit of the most marvelous stock of mounted goods ever shown in this country; not alone in the enormous quantity, but in the wonderful variety of magnificent and exclusive designs. Jewelers will be shown the effects that will be worn during the season of 1906-7.

If you intend coming here during these dates, kindly advise us whether we can be of service to you in securing accommodations at any of the hotels or in any other way.

As the time is now approaching for this exhibition, we shall be very glad, indeed, to have you bear in mind to bring with you any odd stones you may have lying around in your safes, that you do not know what to do with. You will find here thousands of the newest and latest suggestions for mounting them, and they will become a source of revenue to your establishment.

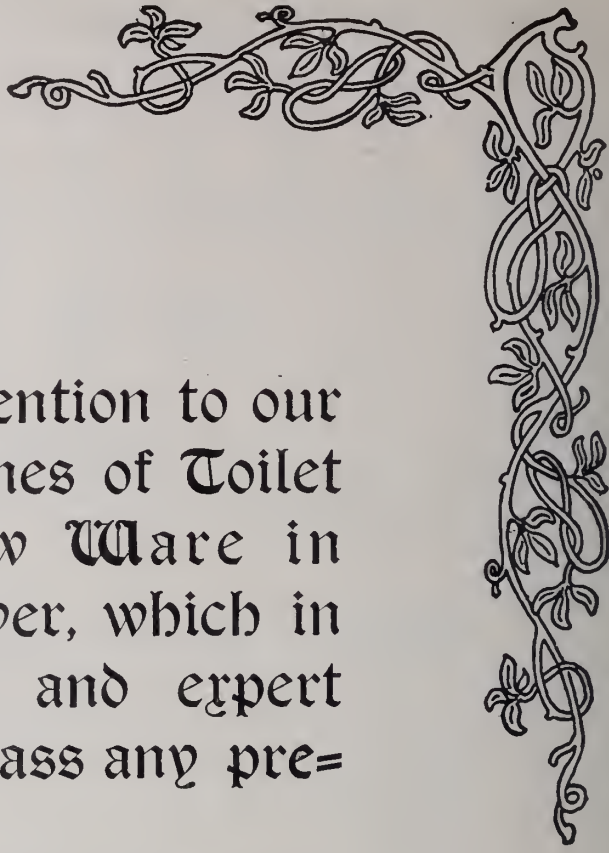

Once a visit always a visit.

POWERS and MAYER,

Makers of Diamond Mounted Jewelry THAT SELLS.

258-260 Fifth Avenue,
NEW YORK.

We are always pleased to ship goods on memorandum when satisfactory references are given.

WE direct attention to our new fall lines of Toilet and Hollow Ware in sterling silver, which in artistic conception and expert craftsmanship surpass any previous display.

Owing to the novel character of our Toilet Sets we will be unable to show same until about July 20, but we are sure you will agree that these sets are a radical departure from anything heretofore attempted. They will be illustrated shortly on this page.

Woodside Sterling Co.

Silversmiths

192 Broadway, New York

The Adam Pattern

AN ORIGINAL NOVELTY IN FLATWARE.

THE WHITING COMPANY take pleasure in confidently directing the attention of the Jewelry Trade to the prepossessing qualities of their radically new departure in flatware design, now introduced as the Adam pattern.

RECOGNIZING the insistent demand for a line of table silverware that shall fitly harmonize with the increasingly popular Adam Furniture and Decoration, the Company have originated a pattern designed in accord with the principles formulated by those celebrated Eighteenth Century architects, the brothers Robert and James Adam.

A FURTHER claim to consideration may be advanced on its behalf: The elegance of its form and the delicacy of its low relief ornamentation, emphasized by the simplicity of the back, unadorned save by the characteristic "swedge," combine to ensure its welcome by all people of taste and refinement.

A COMPLETE line of the Adam pattern, including Individual and Serving Pieces, is offered and ready for delivery Sept. 1st.

The Whiting Mfg. Co.

SILVERSMITHS

New York

Our New Engraved Pattern

One of the three
New and Artistic
Effects
that we are
showing
this season.

TRADE  MARK.

The demand for engraved effects in Toilet Ware and Manicure Sets of heavy weight is increasing. Our engraved pattern, as illustrated, was originated to meet the call of the coming season. The Mirrors and Hair Brushes are made in two sizes and may also be had in plain pattern, from which engraving is eliminated. A complete price list is ready for mailing, and we will be pleased to send it to you upon request.

FACTORY

Cor. McWhorter and Oliver Sts., Newark, N. J.

THE hum of industry is heard throughout the land and especially in the jewelry factories. They are busy turning out our new lines for the Fall Season and the results will be a source of surprise to those of the trade who do not fully appreciate our ability in this direction and a matter of course to our regular customers who expect better stocks from us each season. This expectation we usually live up to and for the Fall of 1906 we have managed to increase our lines of "Sellers" in Jewelry and Watches so that we may truthfully say that they are "The Best Ever."

If one of our representatives does not call on you we shall be pleased to send a selection package.

Our trade-mark "The Rose"  stands for excellence and our guarantee and established reputation of over forty years are back of same.

Dr. George F. Kunz's Report.

Production of Precious Stones in 1905
Published by the United States
Geological Survey.

[The publication of this Report was commenced in THE JEWELERS' CIRCULAR—WEEKLY, July 18, 1906, and will be continued in this and succeeding issues until completed.]

SOUTH AFRICA—(Continued).

On comparing these figures with those of the De Beers group of mines at Kimberley for the same period, it is seen that the blue ground is comparatively very low in its diamond content, but that the average value of the stones per carat is considerably higher than for those of the richest of the other group—the De Beers and Kimberley. The total number of loads washed is nearly two-thirds that of all the De Beers group together; while the total diamond product is less than one-sixth, but its value exceeds one-fifth.

The average number of men employed in the diamond mines of the colony, month by month during 1905, was 526 whites and 4,659 natives. With some fluctuations there has been a general increase of the total number during the year, from 4,458 in July, 1904, to 5,496 in July, 1905. The average monthly wages paid for mining and prospecting in the Orange River Colony are given in a recent article as £20 7s. 7d. to white men and £3 1s. 6d. to natives.¹

BRAZIL.

Diamonds and Carbonado in Bahia.—Considerable space has been given in recent reports of this Bureau to the diamond and carbonado industry of Brazil. An important article has appeared within the last year on the geology of the Bahia region by Prof. Orville A. Derby, who was engaged by the State of Bahia to study the geological occurrence of the carbonados. The article in question is his report of this work, and has been translated into English by Prof. John C. Branner for publication in this country.²

The region examined was the basin of the Paraguaçu River, the upper part of which contains the Chapada Diamantina, or diamond plateau of Bahia. The river traverses four regions or belts of entirely distinct geological character. The first of these takes in all the headwaters of the Paraguaçu and its main affluent, the Santo Antonio; the second reaches from the Falls of Passageni de Andaraí, some 50 miles, to Bebedouro; the third extends about 200 miles, down to Maragópe, and the fourth is a narrow belt adjacent to the coast.

The diamonds and carbons are characteristic of the first region, and occur occasionally in the second and third. At all the localities examined by Prof. Derby they appear in connection with a thick bed of conglomerate about the middle of the hard sandstone formation. In many places, indeed, he states that the gravels worked for diamonds are simply this same conglomerate decomposed in place, and not a more recent superficial deposit. This fact has already been recognized in the State of Minas Geraes, where also, at Grao Mogol, diamonds have been taken from the hard conglomerate itself. It is clear that in Brazil the conditions of diamond occurrence bear no resemblance at all to those in Africa. All the indications point to the conglomerate as the source of the diamonds, and the recent unconsolidated gravels are richest in the vicinity of outcrops of this rock, which miners call *pedra cravada*.

If this determination of the conglomerate as the home of the diamonds be correct, Prof. Derby remarks, the supply must be enormous, and all that has been done heretofore is trivial in comparison. Only a small part, however, of the deposits can be worked with the methods in use thus far. Whether modern scientific processes, using the hydraulic power so abundant in the region, can operate the beds at an actual profit remains a question for future solution.

Elsewhere than in the vicinity of the Serra das Lavras and its conglomerate there are few diamond occurrences, but still some are known that have interest. Along the bed of the Paraguaçu, in particular, there are various points where diamonds are obtained by diving, and some of these are so far from the Serra that it is not easy to see how the source can be so distant. The principal lo-

cality is at the Falls of Funil, near Bebedouro, on the eastern edge of the second region or zone mentioned above. Here the fall is formed by a heavy bed of conglomerate resembling the one in the first zone, but almost certainly of later age. It rests upon granitic rocks and its pebbles are largely thence derived, so that the "formaço," or diamond gravel, is quite different from that of the first zone. The sandstone of the second zone, however, must be largely derived from the first, and the contained diamonds may be thus accounted for.

These accounts should be compared with that by H. W. Furniss, dealing with the same region and reviewed in the report of this Bureau for 1902.³

There is another diamond region in Bahia—that of Cannavieiras and the valley of the Pardo River, and the southern part of the State.⁴ This, Prof. Derby remarks, is the only diamond occurrence in Brazil at all near the sea. It is a region of but slight elevation, only about 100 meters, largely wooded, and with a thick soil that obscures the rocks. At points, however, in the valleys of the Pardo and the Salobro a heavy conglomerate with granitic pebbles is exposed near the diamond washings. One diamond of three grains was obtained for Prof. Derby in a test made on one and one-half cubic meters of decomposed conglomerate selected by him. Thus, again, diamonds are apparently traced to a widespread bed of conglomerate, here quite near the coast, easily recognized, and suggesting extensive possibilities for investigation and development.

NEW SOUTH WALES.

A valuable guidebook to the mines and minerals of New South Wales has lately been issued under the direction of the minister of mines and agriculture in that colony, S. W. Moore.⁵ In this work references are made to the occurrence of diamonds at several points, which have been noted from time to time in former reports of this Bureau.

The more recent and more important diamond districts around Bingara and Inverell are situated near the Queensland border. Bingara is 378 miles north of Sydney, and Inverell and Tingha are both nearly 40 miles east of Bingara. The divisions named from the two latter places contain much tin in the drift, while the Bingara division is worked principally for gold. With regard to diamonds in particular the guidebook says that near Copeton, in the Inverell district, are numerous isolated hills capped with basalt, beneath which are sands and gravels, with tin, diamonds and some gold. These hills have been variously named, one of them being the celebrated diamond locality of Boggy Camp. It was in this district that the discovery of two small diamonds in a basaltic dike was made in 1904 at Oakley Creek, near Copeton.

The Bingara division presents conditions somewhat similar, yet with some differences. The chief diamond yield has been from patches of gravel capping the foothills of the basalt-covered range some five miles to the southwest of Bingara.

It is in the Bingara district, at Ruby Hill, that the eclogite-bearing pipe was observed in 1902, which led to so much discussion as to eclogite being the probable source of the diamonds.⁶ The guidebook states there has been but little activity of late in these fields owing to low prices for the diamonds, which are all of small size.

The statistics for New South Wales, given in this volume, state the diamond yield for 1904 as 14,296 carats, valued at £11,620, and the total production to the end of that year as 147,955 carats, valued at £98,223 17s.

Large Diamond at Mount Werong.—The fact, after years of working at various points, that only small diamonds had been found, led naturally to the belief that no large diamonds were to be expected in Australia. Within the past year, however, a diamond of near 29 carats has been discovered at Mount Werong, 136 miles west of Sydney and 30 miles south of Oberon. It was found at a depth of 12 feet by two gold miners, who were not diamond miners and who did not know what it was. They kept it for some months, and were offered a few pounds for it on two occasions, but suspected that it might be more valuable. Finally it was sent to the State depart-

ment of mines at Sydney, where it was recognized at once, and its value then proved to be £200. The stone is a distorted and flattened crystal, measuring 23 by 15 by 5 mm., flawless, and of a straw yellow. Appreciating the importance of this discovery, E. F. Pittman, of the department of mines, promptly visited the place and made a report upon it, which is reviewed by John Plummer in the *Mining World* of Oct. 21, 1905.⁷

Mount Werong is one of the peaks of the mountain range, some 4,000 feet high, which separates the fertile coast region from the arid interior. In the beds and ravines of the streams that drain the ridge much of the drift gravel is found washed down and redeposited, and here occurs gold, with zircons and sapphires, abundant but small, and also this large diamond, and another found some years ago, and valued at £5. The sapphires have undoubtedly some from the decomposed basalt overlying the drift, as none have been found in the drift itself. The diamond Mr. Pittman refers to the drift; but he also recognizes the possibility of its having come from the basalt, in view of the discovery of one or more diamonds in the somewhat related dolerite at Copeton. This new locality is some 300 miles south of the Inverell and Bingara region.

NOTES ON THE DIAMOND.

Russian Experiments in Crushing Carbons Used in Diamond Drills.—Prof. Alex. M. Mitinsky, of the Mining Academy of St. Petersburg, Russia, is carrying on a very interesting series of experiments in crushing the carbons used in diamond drills.⁸ The rate of advance of a diamond drill increases with the pressure up to a point where the diamonds are likely to break. Here the limit is reached, beyond which an economic loss is involved by greater pressure. The object of this investigation was to determine this limit, which had not before been done, and which is of course a very important practical question.

There has been hitherto a remarkable difference in the practice of European and American operators in work of this kind. The former have generally followed an empirical rule of applying a pressure of two kilograms per square centimeter on the bottom of the drill, which is equivalent, with ordinary tools, to one kilogram per square millimeter on the diamonds. American drillers have used far higher pressures, as much as 50 or 60 kilograms per square centimeter; by the same ratio this would give 25 to 30 kilograms per square millimeter on the stones set in the drill.

Prof. Mitinsky, assisted by S. Woisslaw, the pioneer of diamond drilling in Russia, selected a number of carbons and subjected them to pressure tests. This was done by placing each stone between two metal plates, a harder one representing the rock and a softer one representing the tool. These were connected with a very sensitive press and recording apparatus, with a maximum load of one metric ton. Different metals and different grades of steel were tried, and the half-sum of the areas of the impressions made in the two plates, in each test, was taken as the cross-section area of the diamond that had been pressed into them for calculation of the force exerted per square millimeter of the stone. The first test was to the limit of the press, one metric ton, without breaking, and the determination was 54.3 kilograms per square millimeter. The second stone, a small one, broke at a calculated pressure of 80.6 kilograms per square millimeter. Three other tests had an average of 68 kilograms as the breaking limit, the lowest being 56 kilograms.

These experiments, Prof. Mitinsky thinks, show clearly that the pressure on drilling tools can safely be much increased with corresponding advantage in results, and that the Americans although far in advance of the Europeans, have yet been operating well within the limit of practical advantage.

After these tests Mr. Woisslaw directed his workmen to disregard the risk of breakage and to use the highest pressure attainable with their machinery. Prof. Mitinsky states that the results were very good, and adds that by this method tools can be obtained that can be run safely at a rim speed of 25 meters per second.

(To be continued.)

Magnificent Silver Loving Cup Presented to the Chicago Yacht Club.

ONE of the most beautiful specimens in silversmithing that has been exhibited of late is a loving cup represented to the Chicago Yacht Club by Sir John G. Nutting, Baronet of St. Helens, Dublin, Ireland. The trophy was given for the encouragement of yachting on the Great Lakes, and will be offered by the club as a prize for contests to be held, in all probability, during the coming Fall. An illustration appears on the front cover of this issue.

This superb example of Martelé silver workmanship was designed by the Gorham Co., and produced in its factory at Providence, R. I. It stands 31 inches high and the width across the rim is 12 inches. Surmounting the top of the cup is a miniature of a viking ship in sail with flying standard, a representation of ancient skill in seamanship that is a conspicuous feature in the design. A slight liberty is taken with the viking by placing the club's colors on the expanded sail. Directly below the graceful little ship are two mermaids, applied to the upper portion of the curved handles of the bowl, who are looking intently at the moving vessel. Mermaids are also applied at the foot of the handles, adjoining the base of the bowl and just above the stem. The latter figures are supporting an ornate panel within which is the inscription. Other mermaids, shells, sea fishes and sea grass are gracefully hammered in the design, encircling the inscription. Shells and other marine effects are also tastefully used in the ornamentation of other portions of the cup, including the cover and base. The cup stands on a handsome pedestal.

The inscription reads: "Presented to the Chicago Yacht Club for the Encouragement of the Sport of Yachting on the Great Lakes by Sir John G. Nutting, Baronet, St. Helens, Dublin, July, 1906."

Census Report on Jewelry and Clock Industries of Connecticut.

Statistics showing the prosperity of the jewelry and clock business of Connecticut were issued within the past week by the National Census Bureau. They show a total output in the clock industry of over \$6,000,000 in a year, and of over \$100,000 in the same length of time in jewelry. The figures tell their own story, and follow:

	Clocks. Jewelry.

Report of Rapid Development of American Culture Pearl Industry Not Believed in New York.

Reports sent out from La Paz, lower California, which are not believed in New York, are to the effect that a French company is now cultivating oysters and growing pearls under a new process which is said to yield better results than anything tried before. The Frenchmen are said to be members of the Boleo Copper Co., and to have associated with some capitalists of Mexico City and La Paz. It is further said that the company has issued a statement showing that in 1905, the first year of its operation, it netted a profit of \$53,000 on an investment of \$63,000.

The process used by the company is said to include the incubating and hatching of the oyster and its proper nutrition with a view to producing the best kind of a pearl. The incubating and brooding process is said to be the invention of Gaston Vives, a pearl fisherman of La Paz, who has taken out patents.

It is said that the company employs several hundred divers and operates 500 incubators. The divers are said to obtain the spawn of the pearl mollusk, which are placed in the incubators. The shells are said to be sold to button manufacturers in California. It is claimed that the company has an important fishing concession.

Maurice Brower, 12 John St., who has acted as agent for the Japanese culture pearls, and who keeps in close touch with developments of the American pearl fisheries, was asked his opinion as to the above report last Monday, just after he returned from a 10 days' trip to western pearl fisheries. Mr. Brower said that culture pearls have been produced at a number of points in the United States. As far as he knows none of these experiments has been as yet of any commercial importance. No pearls produced in this way, he says, are known to have reached the market at any time.

The methods employed by the Americans who have been experimenting along this line, this dealer says, have been somewhat different from those used by the Japanese. As is known in the trade, the Japanese insert a plug in the shell of the oyster and on the point of the plug the button pearls are then produced. In this country the most popular method seems to be to open the shell, inserting on the flesh of the oyster of a grain of sand or some other irritating substance, and then close the shell, which is returned to the water. The oyster coats over the intruding article so that a round or approximately round pearl is produced.

The difficulty, however, is in getting pearls of sufficient size in attractive lustre. Mr. Brower says that he has never seen any culture pearls produced in this country that are larger than five grains. He has heard that some have been produced weighing 10 grains. Most of those that have been produced range from one grain to five grains. The Americans, he says, have no more success in producing pearls less than one grain in size than in getting those larger than 10 grains.

Mr. Brower says that the chief trouble is in the lack of attractive coloring or lustre, and it is on account of this that all the

pearls produced in this manner, which he has seen, are practically without value except as curiosities. As to the company reported to be operating in Lower California, Mr. Brower says he has no knowledge. He knows of individual fishermen who are experimenting, but has not heard of any operation on a considerable scale.

As to values, this dealer gives as an instance that if a five-grain Oriental pearl brings \$100, Japanese culture pearls of the same weight might bring \$10, and on an American culture pearl he would hesitate to place any value.

A report from Bellefontaine, O., says that pearls found in a new bed, in the St. Mary's River, have been sent to Tiffany & Co., New York, for appraisal.

From Red Wing, Minn., comes a report that I. E. Anthony, of Prairie du Chien, obtained \$7,300 for the pearl found at that place by Martin Bates. The latter, it is said, received this amount less \$1,150, Mr. Anthony's commission.

Death of Chas. Teetzel.

BENTON HARBOR, Mich., July 25.—This town has lost one of its oldest and most prominent jewelers. Charles Teetzel, of the firm of Teetzel & Alger, having passed away Sunday night. Death was due to paralysis, and occurred at his home. Besides being the oldest jeweler, Mr. Teetzel had, with one exception, been in business longer than any other man in Benton Harbor.

Deceased was 55 years of age, and commenced business here about 30 years ago. He continued alone until 1896, when he formed a partnership with William Haydon, under the style of Teetzel & Haydon. The firm met with reverses, and the business was sold to Mr. Haydon's father, under whose name it was conducted until January, 1899, when the latter sold out to E. A. Hamilton, with whom Mr. Teetzel continued as watchmaker. He then joined Mr. Hamilton as partner, under the firm style of Teetzel & Hamilton, and a branch store was opened in St. Joseph. This firm dissolved in the Spring of 1900, Mr. Hamilton taking the St. Joseph store and Mr. Teetzel remaining here. Last year he joined forces with George D. Alger, who had formerly been in business for himself, and later was watchmaker for Teetzel & Haydon.

Mr. Teetzel was very popular in the trade, and was known as an able workman and clever watchmaker. He stood high in the community, and his death was mourned by a large circle of friends throughout this section.

C. D. Fry has admitted a partner in his jewelry business in Sasakwa, Okla., and the firm is now Fry & Roberts.

According to reports dissensions in the management of the National Self-Winding Clock Co., Champaign, Ill., have led to a committee of the Board of Directors taking charge of the business. The committee in a communication advises that the factory be continued in operation on an economical basis and that improvements be made in the construction of mantel clocks. The company, which formerly had its factory in Bristol, Conn., was incorporated with an authorized capital of \$1,000,000.

San Francisco Wholesale Jewelers' Sample Trunks Robbed of \$13,000 Worth of Stock.

GILROY, Cal., July 24.—Diamonds valued at \$10,000, with watches and other jewelry worth \$3,000, were stolen last night from two sample trunks belonging to Adolph Eisenberg & Co., wholesale jewelers, of San Francisco. The trunks were left at Frutig's jewelry store in this town.

Mr. Eisenberg reached here on the 8:40 train, and had his trunks taken to Mr. Frutig's store at once. When the night watchman made the rounds at midnight the store was securely locked and the trunks had been pried open with a jimmy and looted of their valuable contents.

It is believed that the robbery was committed by a well-dressed stranger, who was seen peering into the window of the store last evening while Messrs. Eisenberg and Frutig were there. The actions of this stranger attracted the attention of the two men and Mr. Eisenberg went to the front of the store to question him. The stranger appeared to be intoxicated as soon as Mr. Eisenberg advanced, and reeled down the street out of sight. This incident, while rousing the suspicions of Mr. Eisenberg at the time, was forgotten until the daring robbery was discovered this morning.

Sheriff Ross and Deputy Sheriff White have secured a good description of the supposed burglar, who was seen by a number of people in the vicinity of Mr. Frutig's store last night. It is thought that the stranger is a professional diamond thief, who has been following Mr. Eisenberg, awaiting a favorable opportunity to carry out his plan of robbery.

Jewelers of Santa Rosa, Cal., Give Birthday Gift to John Hood in Recognition of His Work.

SANTA ROSA, Cal., July 25.—John Hood, a well-known retail jeweler of this city, celebrated his birthday last week, at which time several members of the trade in this city took occasion to surprise him with a handsome present in recognition of all he had done for his brother jewelers after the disaster of April 18. The present took the form of a handsome weathered oak writing table-cabinet and chair, which was given to him formally.

After the earthquake, a number of local watchmakers and jewelers having lost their tools and stock, were almost destitute, and practically unable to continue in business, but through Mr. Hood's efforts attention was called to this by a letter written to THE CIRCULAR-WEEKLY, and as a result the Jewelers' Relief Association and the Jewelers' Board of Trade forwarded to Mr. Hood new tools and a substantial check for use by the jewelers who had suffered. Among those who benefited by Mr. Hood's work and who participated in presenting him with the cabinet were A. P. McGregor, E. P. Sawyer, H. R. Eckstrom, M. F. Noack and E. F. Heath.

Thieves who recently broke into the post-office at Crooksville, O., and after blowing open the safe stole \$15 in cash and \$75 in postage stamps, on the same day entered the retail jewelry store of G. F. Stebbins, where, however, they secured nothing of value.

The Diamond Markets.

ANTWERP, July 20.—The situation in the diamond industry here is the same as last month. A better tendency is to be observed in the demand for very small goods, but the market for the large stones remains very quiet. The manufacturers have much difficulty in finding the necessary rough goods to keep all their workmen occupied, so that a certain number of diamond cutters are laid off at this moment.

The offices of Mr. N. Missok, which were at 17 Longue Rue de l'utel, are now at 105 Avenue du Sux. G. Landsberg, who lived at 14 Rue Gounod, now has his office at 50 Rue Brant.

Many foreign buyers visited the Diamond Club during the past fortnight, among others Messrs. Slyper, Bismuth, Haski, Mitacoupolo, Weissberg, De Haan, Eisenhart, Emile Weill, M. Slabotsky, Godesfeld, H. Sevadjan, Adolphe Levy, Eknayan an Wins, all of Paris; Messrs. Kauffmann, Tufel, Frytel, L. Van Moppes and Broekhuysen, London; Messrs. Silberfeld, Lindernborn, Jacobson, Harper and Herzfelder, New York; Mr. Strauss, Hanau; Mr. Hekster, Amsterdam; Mr. Abend, Berlin; Mr. Schatkin, Liverpool; Mr. Mayers, Boston; Mr. Beldiche, Algeria; S. Rapsport, Leipzig; Mr. Alfandari, Constantinople; Mr. Kahn, Moscow; Mr. Kabrinsky, Wilma; Messrs. Pines and Siebenberg, Warsaw; Mr. Hakenbrouck, Frankfurt-on-Main; Mr. Harodischi, Bialystock; Messrs. Gaumer, Antonio and Lorenzi, Milan; Mr. Bellack, Vienna; Mr. Alexandroff, St Petersburg.

AMSTERDAM, July 18.—During the second half of June this market was visited by several foreign buyers, with the result that important sales were made, especially in m     of good quality and brilliants of one and two grains. The demand for good m     continues, but these stones are obtained with great difficulty. The demand for rough continues very brisk, notwithstanding the commencement of the holiday season.

Among the foreign buyers who have been here recently were: M. Hahn & Co., Mr. Minnelstein, Lambert Fr  res & Co., A. & E. Worms and Mr. Pehlivanian, all of Paris; Messrs. Bozenhardt and Jollasse, Hamburg; H. Klein, Antwerp; representatives of Zimmermann, Rees & Co.; Jacobson Bros., Laubheim Bros., Arnstein Bros. & Co., Zachs Oppenheimer, L. Oppenheim and Ingomar, Goldsmith & Co., all of New York; Fox Bros. & Co., Cincinnati, and Sigler & Co., Cleveland.

PARIS, July 18.—The market for roses has been very quiet during the last two weeks, although one large merchant bought several hundred carats of small roses of 110 to 125 francs per carat. Small brilliants and eight faces are in demand, chiefly by Paris firms. Several sales were made with American, Argentine and Brazilian dealers in pearls and colored stones.

Two bad failures occurred at the end of June, one by a merchant who has a branch in London, who offered to compromise with his creditors, and the other by a merchant who made a large number of

purchases on time and paid prices out of proportion to the market value.

Miss Alice Bernard, the daughter of Paul Bernard, the vice-president of the Syndicat Professionnel des N  gociants et Courtiers en Pierres Pr  cieuses, is engaged to Nathan Pront, of Amsterdam.

The offices of Robert Menkin are now at 19 Rue de Rochechouart. The office of Mr. Mitacoupolo, formerly on the Ave. Alphonse, at Saint Mande, is now at 80 Rue Boliyar. A new concern has been formed here under the style of Emile Weill-Weill & Fils, 1 Rue Laffitte, with a capital of 300,000 francs.

Jewelry, Clocks, Optical Goods, Watches, Silverware and Kindred Lines Exported from New York.

WASHINGTON, D. C., July 25.—The following were the exports of jewelry, silverware and optical goods, clocks, watches and kindred lines from the Port of New York for the week just ended:

Auckland: 9 packages watches, \$1,390; 12 packages plated ware, \$1,419; 259 packages clocks, \$9,065.

Bahia Blanca: 3 packages plated ware, \$473. Buenos Ayres: 1 package thermometers, \$242; 33 packages plated ware, \$3,349; 4 packages optical goods, \$1,144; 4 packages clocks, \$115; 1 package watches, \$1,292.

Callao: 3 packages watches, \$576.

Cape Town: 79 packages clocks, \$1,078; 1 package watches, \$154; 5 packages plated ware, \$421.

Chaux du Fonds: 3 packages watches, \$327.

Colombo: 16 packages clocks, \$431.

Dublin: 4 packages clocks, \$115.

Fiume: 3 packages clocks, \$125.

Glasgow: 52 packages clocks, \$1,460.

Hamburg: 2 packages plated ware, \$350; 5 packages optical goods, \$550; 3 packages jewelry, \$170.

Havana: 2 packages plated ware, \$124; 34 packages clocks, \$336; 3 packages jewelry, \$877; 5 packages jewelry, \$880; 1 package scopes and views, \$285; 30 packages clocks, \$260.

Havre: 4 packages optical goods, \$589; 3 packages jewelry, \$1,434; 2 packages watches, \$504.

Liverpool: 21 packages jewelers' ashes, \$1,500; 67 packages clocks, \$1,044; 5 packages jewelry, \$1,489; 2 packages scopes and views, \$150; 1 package plated ware, \$169; 3 packages clocks, \$139; 2 packages jewelry, \$1,500.

London: 78 packages clocks, \$3,336; 1 package stereoscopic goods, \$126; 1 package jewelry, \$186; 11 packages clocks, \$385; 6 packages optical goods, \$1,273; 3 packages scopes and views, \$406; 24 packages watches, \$11,083.

Manila: 7 packages clocks, \$210.

Montevideo: 4 packages jewelry, \$262; 7 packages clocks, \$140; 7 packages plated ware, \$670.

Rio de Janeiro: 7 packages clocks, \$171; 4 packages plated ware, \$488.

St. Johns: 3 packages optical goods, \$141.

Southampton: 1 package watches, \$470.

Sydney: 15 packages plated ware, \$1,376; 112 packages clocks, \$1,363; 10 packages watches, \$1,080; 10 packages clocks, \$270.

Trinidad: 2 packages jewelry, \$100.

Valparaiso: 3 packages plated ware, \$131.

Yokohama: 329 packages clocks, \$5,355.

Zanzibar: 8 packages clocks, \$100.

Death of George N. Luckey.

BALDWINVILLE, N. Y., July 25.—George N. Luckey, who died at the home of his daughter, Mrs. E. H. Lewis, Monday morning, was well known in business circles in this section, having been in the jewelry trade about 40 years. Death came after a lingering illness, which had kept him from business for two years.

Deceased was widely known, both as a jeweler and optician, and was at one time an officer of the New York State Optical Society. He came to Baldwinsville in 1860, and was in business in the Seneca House block for many years. Owing to

his impaired health, he was forced to retire in 1894. He was well thought of in the jewelry trade and by his customers, and he had many friends, both in business and social life, who deeply mourn his loss.

Mr. Luckey was married in 1863 to Miss Lucy Shore, who died seven years ago. He is survived by two daughters, Mrs. E. H. Lewis, of this village, and Miss Maud Luckey, of Saratoga. The funeral was held yesterday afternoon, and was largely attended. Among others there was a delegation from the Masonic fraternity, in which Mr. Luckey had been prominent.

Rochester, N. Y., Jewelers Taking Steps to Form a Local Organization.

ROCHESTER, N. Y., July 26.—With the National Retail Jewelers' convention only a week off local jewelers finally got together this afternoon and discussed matters relative thereto. Early in the week Philip Present, taking the responsibility on his own shoulders, sent out postal cards to the local jewelers inviting them to come together and formulate some plans. Mr. Present stated that the meeting was to be held for two purposes: First, to discuss the matter of the entertainment of the visiting jewelers during their stay and, second, to discuss the advisability of forming of local jewelers' association.

About 10 members of the trade responded to the call and met this afternoon at the Chamber of Commerce. They were: S. D. Burritt, E. J. Scheer, Geo. L. Andrus, H. I. Sunderlin, Philip Present, Ellery Handy, Geo. Hunt, Willis Kennedy, M. H. Van Bergh, J. J. Ernisee. H. I. Sunderlin was elected as temporary chairman. Regrets were read from Klee & Kroh, Mr. Klee being out of town and Mr. Kroh was not able to be present. John Humburch was also out of town and sent his regrets, as did for the same reason J. R. White and E. S. Ettenheimer & Co. Henry Oemish was indisposed and asked to be excused. Otto Voss, Aug. Gervins and E. Dygert were also unable to attend and sent in cards. All of those absent and who sent in excuses with the exception of Humburch Bros. and E. S. Ettenheimer & Co. said that they were in favor of forming a local society.

Considerable discussion was given to the matter of forming a society, and it was finally decided to appoint E. J. Scheer and H. I. Sunderlin a committee to visit the members of the trade and make a thorough investigation as to the prevailing sentiment of those who did not heed the first call.

Regarding the entertainment of the visiting jewelers, Aug. 3 and 4, it was decided that inasmuch as nearly all delegates would also be here for the optical convention and that they would be royally entertained during that convention, no effort would be made to raise funds for their entertainment. There was little said in regard to indorsing the movement for a national association, the jewelers here thinking it best to wait.

On Tuesday, Aug. 7, another meeting of the jewelers will be held at the Rochester Club. At this meeting the committee will report on what they have accomplished, and further steps toward the formation of a permanent society will be taken. All dealers are urged to be present.

HAYDEN W. WHEELER & CO.

MOUNTED DIAMONDS

We are making up many new pieces in mounted diamonds for our Fall stock and will show new ideas and a larger and finer stock than ever.

Besides mounted diamonds, we have a large stock of loose diamonds, colored stones and pearls.

Two More Men Arrested in Connection With Robbery of Joseph Wineburgh & Sons, Utica, N. Y.

UTICA, N. Y., July 27.—Another arrest was made last night, which may have a very important bearing on the \$2,500 diamond tray theft from Joseph Wineburgh & Sons' store on July 17. It is believed that the principal in the bold daylight robbery was captured at Brockport, N. Y., a small town in western New York, and the local police believe the man is John Reedy, alias Harry Reed, alias Harry Campbell, a crook known to all the police in the larger cities. Reedy is supposed to be the man who got away with the tray of diamonds while Bliss and the other man now under arrest here occupied the attention of the clerks in the Wineburgh store.

Stimulated by a reward of \$500, the New York Central Railroad detectives took a hand in the search for the man who got away with the tray of diamonds. The detectives secured photographs of many noted crooks. These they showed to the night manager and waiters at the Hotel Lewis, where the quartette of crooks remained two nights before the robbery. They identified a picture of Reedy as one of the four men, and last night Detective Holstein arrested the suspect at Brockport.

Reedy and another man, said to be Thomas Hayes, better known in the underworld as "Big Logan," who was also arrested at Brockport, were brought here to-night, and, while the police refuse to say positively whether they are the two missing diamond thieves, the two men have been sufficiently identified to warrant their being held here. Police departments in other cities want the two men.

The prisoners were arrested at a firemen's convention at Brockport. They were seen to leave a train from Buffalo and taken into custody by the railroad detectives. Mr. Wineburgh partially identified the two men, and they will be held. Both admitted that they were pickpockets, but denied any connection with the Wineburgh robbery.

It is more than likely that some of the men will be held to account for a number of big jewelry robberies which have recently taken place. William F. Anteman, a jeweler in South Pearl St., in Albany, was the victim of a \$2,000 theft of diamonds recently. Mr. Anteman has been here the past two days, and he positively identified Bliss, one of the first men arrested, as one of the men who robbed him. He could not positively identify Young, the man arrested with Bliss.

Chief Cleveland has received a communication from police departments in other cities where the photographs of Bliss and Young have been identified. It is reported that Bliss is wanted for a connection with the robbery of \$7,000 worth of diamonds in a New York store. He operated then as J. R. Ritchie. The Pittsburg police believe that Bliss, under the name of John Rollins, and Young, as James Hoyt, were connected with a sensational diamond robbery in the store of E. P. Roberts & Son in Pittsburg during the holiday season in 1899. Hoyt engaged the attention of a clerk while Rollins slipped a tray of diamonds into a bag. They were captured and each was sentenced to the penitentiary for three and a half years. It

is also reported that Bliss is wanted in Boston.

After the Wineburgh robbery three men went through Lafayette St. in the direction of Rome. A woman saw one of the men place a package under an old stoop. She made an investigation, and unearthed one of the clocks which the thieves had bought at the Wineburgh store. The woman positively identified Bliss and Young as two of the three men, and a Lafayette St. saloon-keeper who sold them drinks that afternoon also identified Young and Bliss.

There is no question but that four important arrests have been made. Even if the men cannot be held here they are wanted in other places.

No trace of the missing diamonds has been secured.

Bliss and Young were arraigned in police court to-day. They asked for a further adjournment in which to consult lawyers, and their request was granted. While they were in court parties positively identified them in connection with the Wineburgh robbery.

UTICA, N. Y., July 30.—There is a strong possibility that the diamonds stolen from Wineburgh & Sons' store may be returned to their owners before another issue of THE CIRCULAR-WEEKLY is published. It is understood that Bliss, who has been "sloughed away" four or five times by police departments, and, except for one instance, for diamond stealing, is beginning to dicker for light punishment conditional upon the return of the stolen diamonds. A letter, it is said, has been sent to Boston in Bliss' interests which may result in the return of the diamonds.

Railroad Detective Holstein, who arrested Reedy and Hayes, says he hopes to unearth the stolen diamonds. He intimates that they were hidden between Utica and Rome by Bliss, Young and the "tall man" who worked the Wineburgh case, and that he will learn the location of the hiding place.

There are some doubts in the minds of the police whether Reedy and Hayes can be connected with the Wineburgh robbery. The police know they were here the week of the robbery.

Bliss' picture published in THE CIRCULAR-WEEKLY is exactly like the one taken at the Fellsburg penitentiary after the diamond robbery there, except in the latter picture his hair is cut short. Besides the Pittsburg job, according to Inspector McLoughlin, of New York, Bliss turned a trick in Washington identical with the one so successfully worked here. According to the police, Bliss, under the name of John Roland, alias Ritchie, was arrested Nov. 24, 1899, in Pittsburg on complaint of A. E. Seidle, from whom he had stolen a tray of diamonds, and was sentenced Dec. 6, on plea of guilty, to the Western penitentiary for three and one-half years.

Under the name of Jones Reilly, alias John F. Ritchie, he was arrested in Philadelphia Jan. 14, 1898, for stealing a tray of diamonds, and sentenced to the penitentiary on a plea of guilty for two years, while as John Robinson he was arrested in Allegheny, Pa., for stealing a tray of diamonds on April 7, 1902, and on Feb. 6, 1903, was sentenced in Washington, D. C.,

to which police department he had been surrendered, to three years in prison.

July 12, 1886, Bliss was convicted at Boston of grand larceny, and sent to the Concord, (Mass.) Reformatory. On June 7, 1892, he was arrested at Boston for counterfeiting, and got a four years' sentence.

J. W. Watts, an attorney, managed to get into Bliss' cell and have a talk with the prisoner. This was against Chief Cleveland's orders, and when he learned of it he had the lawyer pulled out of the cell and searched. Watts had a letter written by Bliss and directed to a woman in Boston, requesting her "to get the goods back to Utica, and I won't have to do so long a stretch." The police retained possession of the letter. It is believed here that Bliss can raise sufficient cash to straighten out matters with Wineburgh & Sons if the stolen gems are not recovered.

Chief Cleveland has refused to allow any "dickers" with Bliss which entail any promises of lighter punishment provided the diamonds are returned. The chief intends to put Bliss away where he will not do any mischief for a few years.

Mr. Antemann, the Albany jeweler, has positively identified Bliss as one of the two men who robbed him. Bliss' partner engaged Antemann's attention with some stick pins in a show window, while Bliss committed the robbery. The Albany authorities will lodge a warrant here against Bliss.

Many San Francisco Jewelers Reimbursed—Insurance Adjusters Making Rapid Progress.

SAN FRANCISCO, Cal., July 25.—The insurance adjusters are now making rapid progress in adjusting the large losses in this city. During the past few days a number of important adjustments affecting the jewelry trade have been made. The loss on the Shreve building, occupied by Shreve & Co., is placed at \$348,487.81 for actual fire damage. The insurance carried on the property was \$440,000, the sound value of which was \$544,156.51, and the salvage was \$195,668.70.

Moss, Inc., formerly in the retail jewelry business at 622 Market St., carried insurance to the amount of \$36,000 on a stock valued at \$37,856.53.

A. I. Hall & Son, wholesale jewelers, formerly at 3d and Mission Sts., but now in the Kamm building, on Market St., carried an insurance of \$73,000 on property valued at \$101,938.70. The salvage was \$9,728.83.

The Alphonse Judis Co., wholesale jewelers and diamond merchants, carried an inside insurance on stock amounting to \$25,000 and outside insurance amounting to \$15,000. The stock in the safe was inventoried at \$107,525, and the damage to it was fixed at \$20,000. Diamonds which were carried from the store and saved amounted to \$58,652.98; outside stock, \$89,211.47; the net loss stock outside of the safe was \$30,261.

Armer & Weinshenk, jewelry supply dealers, formerly in business on Sutter St., have received an insurance payment of \$7,000.

The Gorham Mfg. Co., formerly on Sutter St., but now located on Broadway, Oakland, has been paid insurance to the amount of \$24,000.

Diamond Market Stronger Than Ever —United States the Best Market for Large Fine Stones.

According to Leopold Stern, of Stern Bros. & Co., New York, who returned on Monday of last week from Europe on the *New York*, the diamond market abroad is stronger than ever before, and there has never been so much difficulty in obtaining stones in desirable sizes and qualities as there is now. The death of Alfred Beit, which is greatly deplored, will not affect the market in any way. Mr. Stern says that the "sights" accorded to the half dozen concerns in New York who buy rough stones direct from the syndicate are less frequent than formerly. He believes that the syndicate has applications for 15 times the quantity of diamonds which it is selling.

In all parts of the world the demand is increasing, and the United States continues to get the lion's share of the cleaner qualities of diamonds. So true is this, he says, that if he were a diamond merchant in London, or in other cities in Europe, and desired to buy stones in sizes from one-half carat upward, in the cleaner and best made goods, he would not go first to Amsterdam and Antwerp, but would come to New York. The diamonds cut here, in the sizes from half a carat up, Mr. Stern says, are not excelled in workmanship by those made in any other part of the world, and the material used here is the best.

This idea of Mr. Stern's that European merchants may yet come to New York to buy diamonds was called to the attention of several large importing firms by THE CIRCULAR-WEEKLY reporter, and they all agreed with him. It was pointed out that the rough diamonds are brought into this country free of duty. "The additional cost of labor in New York," said one manufacturer, "is more than compensated by superior workmanship, and does not nearly equal the 10 per cent. duty imposed on cut stones imported into the United States." It is, therefore, impossible for the foreign merchants to compete with the American cutters with any degree of success in the sale of the finer qualities of cut stones."

Schedules Filed With Bankruptcy Petition of Frank T. Pearce, Providence, R. I., Show Heavy Liabilities.

PROVIDENCE, R. I., July 25.—Frank T. Pearce, who does business as Frank T. Pearce & Co., a manufacturer of gold pens, at 85 Sprague St., has filed a petition in bankruptcy, giving liabilities of \$69,293.75 and assets of \$30,517.56. News of the failure was received with some little surprise.

The largest single claim is that of the Charles H. Perkins estate, and this is for \$24,750.36. The next heaviest creditor is the estate of Aldridge Gardiner, this being interested to the extent of \$17,024. Mr. Pearce's son, Aldridge G. Pearce, puts in a claim of \$2,700 for labor, \$1,000 for money loaned and \$10,000 in notes. Annie Pearce, the daughter, presents a claim of \$690. The Edwin Lowe Gold Plate Co. is the only other heavy creditor, the amount of this firm's claim being \$2,296.18, this bill having been contracted for materials furnished to the Pearce firm. This firm also holds

notes to the amount of approximately \$2,100.

An itemized statement of the assets is as follows: Cash on hand, \$2.18; stock in trade, \$16,000; machinery and tools, \$9,500; open accounts, \$5,000; money in bank, \$15.32. Total, \$30,517.56. According to the statement, this leaves a deficit of \$38,776.19. The preferred claims for labor amount to \$719.21, and there is a lengthy list of creditors for small amounts.

A meeting of the creditors has been called, and will be held in the office of Chester W. Barrows, referee in bankruptcy, Aug. 6, at 10 A. M.

Bankruptcy Petition Filed Against Onondaga Art Metal Co. Following the Disappearance of Edward C.

Howe.

SYRACUSE, N. Y., July 30.—Edward C. Howe, who for many years was engaged in the jewelry business with his father, Henry J. Howe, and who six months ago started the Onondaga Art Metal Co., is missing, and Saturday a receiver for the concern was applied for on behalf of Syracuse creditors. It is known that Mr. Howe, who is about 33 years old, left his wife unprovided for.

The Howes are among the best known jewelers in the State. Henry J. Howe has conducted for many years, and still conducts, the largest jewelry store in the city at the corner of S Salina and Washington Sts., and up to six months ago his son Edward was in the business with him. The father backed the son largely, and is a heavy loser by the latter's misdeeds.

The petition in bankruptcy was filed by Attorney John C. Boland and Thomas A. Mara, superintendent of the shops, was appointed receiver of the concern. The petitioners are Charles J. Barker, who holds a promissory note for \$1,500 dated July 1, W. H. H. Chamberlain, who has a balance of \$39.25 due him, and Herman J. Gorke, who has \$60.30 due him.

The petition states that Howe's debts are \$12,000, and that the stock of the company is worth \$3,000 and accounts \$3,000 more. Considerable material is made up.

It is stated in the petition that on July 3, while insolvent, Howe gave to his father, Henry J. Howe, a chattel mortgage for \$4,000 on the machinery and other property for loans made between Sept. 1, 1905, and July 1, 1906. The petition states that Howe left his apartments July 12 and no word has been heard from him since.

Clever Thief Steals Rings from Two Boston Jewelry Stores and Escapes.

BOSTON, Mass., July 28.—Two thefts of rings from jewelry stores have taken place in Boston within a week, and circumstances point to the probability that the same man, well dressed, age about 21, committed both.

On Saturday last a cluster diamond ring was taken from a small tray, and a cheap ring substituted therefor while the clerk's attention was diverted, at Freeman & Taylor's, on Temple Pl. On Tuesday evening, by asking the clerk at H. Rahlin's, 323 Tremont St., to get another tray, opportunity was given the robber to lift three wedding rings and a diamond ring from a tray which had previously been set before him, and make his escape.

Peter Foisey, Wallace, Idaho, Makes a General Assignment.

WALLACE, Idaho, July 25.—Peter Foisey, a well-known jeweler of this city, made an assignment last week under State laws to Leonard E. Hanson, for the benefit of his creditors. According to the statement given out, Mr. Foisey's liabilities will amount to about \$5,000, while the value of his assets is placed at \$6,000; the latter consist principally of stock and fixtures.

Mr. Foisey has been in business here since 1897, having previously been located at Prescott and Pocatello. He had made but little progress, and had been hampered for ready cash for some time. It is hoped by his friends that he will be able to arrange with his creditors and continue his business at an early date.

Wm. Igo was taken into custody about a week ago, in Scranton, Pa., on a charge of selling jewelry without a license. He was given his choice of a fine of \$60 or of serving a sentence of 30 days.

*WE are receiving weekly shipments
of desirable goods in all sizes
and grades, at prices that will interest

Interesting Suit Between New York Jewelers Decided—Defendants Will Appeal.

In the suit of J. Finkel, of Locketz & Finkel, 218 E. Houston St., against the Brooklyn Watch Chain Co., 275 Bowery, Judge Rosenthal, of the Municipal Court, 7th District, Brooklyn, last week gave a judgment in favor of the plaintiff for \$27.87. The defendant company announced its intention of appealing to the Appellate Division, Second Department, Supreme Court.

This was the case in which the defendant sued to recover \$45, the purchase price of a quantity of gold slides. The defence was that the gold in the slides did not come up to the guarantee of 14 karat fineness. At the trial a representative of the United States Assay Office gave the results of assays of parts of three different slides that he had assayed. The fineness of the gold, according to his testimony, varied from 11 to a little more than 12 karats.

The plaintiff questioned the government employe in relation to his methods of testing gold, and endeavored to show that the assays were not fair, inasmuch as only portions of a slide were used. It was claimed by the plaintiff that the presence of solder accounted for the variations, and that an analysis of an entire slide would show that the gold was up to the 14 karat standard.

After the testimony was heard the defendant contended that at the most the court should not give a verdict for more than the reasonable value of the slides as indicated by the results of the assays.

The defendant company was represented at the trial by Louis Karasik. It has since retained for the remainder of the litigation Louis J. Jacques. Sol L. Youngentob represented the plaintiff.

Mr. Youngentob, who some time ago served a summons on the members of the Brooklyn Watch Chain Co. in an action which he began against them in behalf of Mr. Finkel for damages for alleged malicious transaction, will serve his complaint in a few days. This action is based on charges made against his client in criminal proceedings, growing out of the same transaction. It was charged that the sale of the slides was in violation of Section 361J of the New York Penal Code, which allows a variation of only one karat from the mark on gold. Magistrate Finn dismissed the charges, and subsequently another magistrate refused to reopen the case.

Death of Fred W. Dexter.

PAWTUCKET, R. I., July 25.—Fred W. Dexter, a well-known resident of this city, a former jeweler, died at his residence, 20 Brook St., yesterday afternoon. The cause of death was Bright's disease, with which he had suffered for several years.

Deceased was born in Pawtucket 48 years ago. After leaving school he entered the store of his father, W. W. Dexter, watchmaker and jeweler, on Main St., and later succeeded his father in the business. It was through his efforts that the Hope Land Co. was formed, he being elected vice-president and one of the directors, and for five of the six seasons the business has been carried on he was manager of the company.

In January, 1885, deceased married Miss Agness E. Muir.

Van Ness Ave., San Francisco's New Retail District, Now the Scene of Numerous Shoppers.

SAN FRANCISCO, July 25.—The retail jewelry trade has been heavy during the past week, and it seems that as the number of stores increase, the volume of business increases in direct proportion. Many jewelers were slow in making up their minds to get back to business right away, and, in fact, the situation was anything but promising with 450 blocks of the business section of the city in total ruin and thousands of the population living in tents. Those who saw an immediate change for the better and at once made preparations for the resumption of business are now reaping a harvest while the backward ones are still engaged in store building and store fitting.

Van Ness Ave. is now the principal shopping district in the new San Francisco, and will probably remain so for several years to come. Its array of apartment houses and princely dwellings has given way to the great retail stores that lined Market St. and the vicinity of Kearney St., Grout Ave., Stockton and Post Sts. Trade had to be revived somewhere and immediately. San Francisco still has plenty of money to spend, and everyone is anxious to get fitted out again as soon as possible. Ladies wishing to replace their articles of jewelry and fancy goods do not wish to follow the business men into the burned area, where the scenes of ruin are on every hand and where the air is filled with dust. Shopping is reckoned as a holiday by women, and when they shop on Van Ness Ave. they are shopping on what has been the city's most aristocratic boulevard, just on the edge of the burned district.

To-day Van Ness Ave. resembles a great fair. The buildings are all of the same height, and most of them are painted white, and as each floats the pennant of the firm the appearance is that of a gala event. The jewelry trade is well represented in this new district. First of all to open were Hammersmith & Field, closely followed by Radke & Co., the Baldwin Jewelry Co. and the Diamond House. The Bohm-Bristol Co., Shreve & Co., the W. K. Vanderslice Co. and the Alexandra Jewelry Store are building, and all expect to be actively engaged in business by Sept. 1.

Joseph Bardenheier, Missing Madison Wis., Jeweler, Robbed and Murdered.

MADISON, Wis., July 30.—The dead body of Joseph Bardenheier, a jeweler, who had been missing since last Monday, was found in the woods three miles east of here to-day. He had been robbed and murdered.

Mr. Bardenheier came here in April from Chicago, in which city he commenced business in 1893. He was 47 years old and a native of Germany. He learned his trade abroad, and came to the United States about 14 years ago.

Geo. O. Warren & Son is the firm style of the business conducted by Geo. O. Warren, Sycamore, Ill.

New Stores and Enterprises.

J. Pasture is about to start in business in Tacoma, Wash.

Gilbert Tuttle, Boston, Mass., will shortly open a store in Winsted, Conn.

Andrew Johnson has opened a watch repairing shop in Lancaster, Minn.

Goldwater Bros., Seattle, Wash., have opened a branch store at Oakland, Cal.

E. C. McCarthy has begun business as a watch and jewelry repairer in Corsicana, Tex.

Wm. Lehberger will shortly engage in the retail jewelry business on West Broadway, Salem, N. J.

Clas. T. Blaum, Dothan, Ala., will soon move to Quitman, Ga., where he will open a new retail jewelry store.

C. H. Myers, formerly of Atlanta, Ga., has moved to Ellijay, Ga., where he has started in the retail jewelry business.

The Jennings Silver Co. was recently incorporated in Newark, N. J., with a capital of \$25,000 with \$1,000 paid in. The incorporators are: John Jennings and Edward Wright, Newark, N. J., and Silas Schwerin, Belleville, N. J.

The National Jewelry Co. is the name of a new concern in Portland, Me. The capital stock is \$10,000. The officers are: President, G. A. Leard, Portland; treasurer, Jas. Redmond, Springfield; clerk, D. A. Meaker, South Portland.

The Josten Mfg. Co., of Owatonna, Minn., was recently incorporated in the State of Minnesota with a capital stock of \$2,500, divided into 250 shares, to sell and repair watches and clocks, and to manufacture jewelers' fittings and tools.

The System Jewelry Co. was incorporated at Hartford, Conn., July 28, with a capital of \$5,000. Frank F. Day, Agnes S. Day and R. F. Barclay, Hartford, are the incorporators of the concern, which will carry on a wholesale and retail jewelry business.

The Currie Hardware & Furniture Co., Currie, Minn., has just added a line of jewelry, clocks, watches, etc., and also a watch and jewelry repairing department. With this new addition the concern has the only jewelry and repairing establishment at that place. The watch repairing department is in charge of a skilled watchmaker.

Death of Percy Whitechurch.

PHILADELPHIA, Pa., July 29.—The many friends of Percy Whitechurch were grieved to learn that he had died yesterday, at his home at 2318 N. Park Ave. Mr. Whitechurch was well known in the clock trade, having been for many years treasurer of G. S. Lovell Clock Co., 18 S. 10th St.

The funeral services will be conducted at his late home and in St. John's Church, Cynwyd, Wednesday.

Ahern & Bergen, who a short time ago started in the plating business at Nashua, N. H., have dissolved partnership, and hereafter John Ahern will continue the business alone.

John Scheers, Appleton, Wis., has completed a watch in which the hands turn from right to left. The watch keeps good time. The inventor believes that it can be made valuable for certain commercial uses which he does not make public, and has applied for a patent upon it.

Buffalo, N. Y.

Berthold Block, of B. Block & Co., jobbers, 520 Main St., went out on the road last Saturday after a vacation spent in this city.

Paul Kinney, East Aurora, son of Jireh Kinney, the veteran retailer of this city, who fell from a bicycle on July 9, remained insensible until last Thursday, when he spoke a few words. He lapses into unconsciousness at frequent intervals, but there is strong hope of his ultimate recovery.

Charles F. Damm, manufacturing jeweler, returned a few days ago from a fishing trip in Michigan. To prove that he did some good fishing, he came home with a photograph of himself and a big string of fish which he held in his hands. Freel Smith, traveling salesman for Mr. Damm, left Buffalo last Thursday for a road trip. One-half of Mr. Damm's shop force is on vacation this week. The other half goes next week.

Present & Co., 444 Main St., have begun extensive alterations in their jewelry store. The establishment is being enlarged, a 30-foot extension being made in the rear. A new and modern front is being put in, and also a modern electric lighting plant. Max Lowenthal, who represents Present & Co., Rochester, on the road, assisted in the store here during his vacation season. He returned to Rochester a few days ago to prepare for his road trip.

The convention of jewelers in Rochester this week was well attended by the members of the trade in this city. Nearly all members of the Buffalo Optical Society, including President Simcox, are attending the convention of opticians, also held in Rochester this week. Jewelers of Buffalo have no trade organization, and the merchants from here attended purely as individuals. The opticians here, however, have one of the strongest optical societies in the State. Its membership is made up of opticians and optical dealers in all the towns of western New York.

An accidental error was made in this column recently in a report that John W. Schlehr, 379 Main St., had purchased the establishment of the C. M. Plarr Mfg. Co., at 178 Ellicott St. Mr. Schlehr never had any intention of buying the establishment, and the Plarr concern never had any intention of selling out to Mr. Schlehr or to anybody else. The report grew out of a misunderstanding based on the fact that Mr. Schlehr was engaged by the C. M. Plarr Mfg. Co. as manager of the factory, which is one of the most extensive in the State. The factory now has a force of 19 skilled workmen, who are working overtime to enable the firm to fill its orders.

Minneapolis and St. Paul.

Peter Aldine, with J. D. Bodfors, Minneapolis, has returned from a three weeks' vacation.

J. W. Robertson, St. Paul, has moved from 322 Jackson St. to 505 Wabasha, where he has opened a new store. He will make a specialty of watch repairing and engraving.

The attendance at the meeting of the Jew-

elers' Association at the Nicollet Hotel, Minneapolis, last week, was large and an interesting and instructive convention was had. After the convention adjourned Thursday the association went to Lake Minnetonka and made a tour of the lake.

A case was heard in the police court in St. Paul last week, where a second-hand clothing and jewelry salesman swindled a young farmer by selling him a bogus watch for \$20, on the claim that it was of Swiss manufacture and had 21 jewels. The proprietor and his clerk were both fined. This is noticeable in that such complaints are becoming very rare.

San Francisco.

P. W. Wierthin, formerly located at 246 Sutter St., is now at 1062 McAllister St.; where he has a small shop.

M. Bratlavsky, dealer in diamonds and jewelry, and who also does repair work, is now located at 964 McAllister St.

Mr. Matthews, of A. I. Hall & Son, has been absent on account of illness, but will probably be able to resume his duties this week.

Karl Eber & Co. are now fitting up their new jewelry store on Post St., near Van Ness Ave., and expect to be able to open in a short time.

Deremer & Co., who formerly had a store at 137 Montgomery St., has secured a first-class location at 1345 Van Ness Ave., and will open for business there at once.

The Keystone Jewelry Co. has secured a location in front of Tait's Cafe at the corner of Eddy St. and Van Ness Ave., and work is being rushed on the store to make it ready for the opening.

Hammersmith & Field are now doing a good business at their store at Eddy St. and Van Ness Ave., and have begun to wish that they had more room, although the present store is about as large as the one on Kearny St. before the fire.

The United Jewelry & Optical Co. has secured a location at 1653 Fillmore St., and is now busily engaged in fitting up a fine large store there. Here a manufacturing establishment will be established and jewelry handled in both a wholesale and retail way.

The Macey Jewelry Co. has its store at Post and Fillmore Sts. completed, and a fairly complete stock is being carried. The store may be cited as an example of the rise in rentals on Fillmore St. since the fire. The space is but a small one of not more than 150 square feet, and could formerly be secured for \$50 a month, but the rate now is \$360.

The Baldwin Jewelry Co. opened its fine new store to the public last week, and already the volume of business agrees favorably with that of the old Market St. store. This firm expects to move back into the old retail district as soon as conditions warrant it, but also think that Van Ness Ave. will retain permanently in a measure its present position as a shopping district.

Paul V. Garin, whose jewelry store on Fillmore St., near Geary St., was opened only two weeks ago, states that he has found business so heavy that additional help has been secured to attend to it. The chief trouble now is getting supplies. The

transportation companies have more freight offered them than can be handled, and many shipments take from 30 to 40 days to come from New York.

Optical Notes and Briefs.

The Davis-Elfen Optical Co. has opened an office on 14th St., Oakland, Cal.

Dr. C. J. Larson, eye specialist, Bemidji, Minn., has moved his offices into the Swed-back block.

The Chinn-Beretta Optical Co., Oakland, Cal., has taken a three years' lease on a store on the west side of Van Ness Ave., near California St., San Francisco.

D. G. Gallett, Aberdeen, S. Dak., is attending the meeting of the American Association of Opticians at Rochester, N. Y., as a delegate from the South Dakota Jewelers' Association.

Judge Troutt has decided in favor of Conrad Gatzert in an action against J. Lerk, the Chinn-Beretta Optical Co. and others for the restitution of premises at 1821 Fillmore St., San Francisco, Cal., and damages. It was held that the renting of the premises to Mr. Lerk on a non-subletting lease had been violated by the renting of the property to the optical company and others.

The State Association of Optometrists of Minnesota closed its 11th semi-annual session at the Studio Arcade, 804 Nicollet Ave., Minneapolis, July 26. The convention lasted three days, and a number of interesting addresses were listened to. Fifteen new members were admitted to the association during the convention. On Thursday afternoon the members joined the State Jewelers' Association for a tour of Lake Minnetonka.

Trans-Atlantic Voyagers.

FROM EUROPE.

Herman Levy, of New York, returned from Europe recently on the *Teutonic*.

Leopold Stern, of Stern Bros. & Co., New York, returned last week on the *New York*.

Trade Gossip.

I. J. Sharick, of the Alaska Jewelry Co., Juneau, Alaska, recently secured the agency in that city and southern Alaska for the official emblem of the Alaska-Yukon-Pacific Exposition. This emblem is unique in many features, being in the form of an Alaska nugget beautifully engraved. On the front appears a profile head between the figures 1909 having above it in raised letters the words "Alaska-Yukon-Pacific Exposition," and below "The Queen City Extends a Welcome to the World."

The beautiful silver service to be presented to the battleship *Louisiana*, the contract for which was recently awarded to Coleman E. Adler, New Orleans, La., was designed and will be made by the Frank W. Smith Co., Gardner, Mass., who are now at work upon it. The pieces which are to comprise the service were described in THE CIRCULAR-WEEKLY, July 4, and the account contained a typographical error, having made the statement that the centerpiece would weigh about 22,000 ounces. This should have read 2,000 ounces.

In view of increasing business, the Langendorf Watch Co., Langendorf, Switzerland, which already employed about 1,500 workmen, is about to open another addition to the many buildings, consisting of a four-story structure with a frontage of 32 windows, enabling it to add 500 more hands to its working force. This new building will be ready for occupancy in a few weeks. The manager of this watch factory is Mr. Kottmann, who visits the watch market personally at intervals of a year or two, and is therefore well known among the wholesale watch people.

A dainty little pamphlet, as unique as it is artistic, has been issued by the Oneida Community, Ltd. It is entitled "Some Business Ideals of the Oneida Community," and traces the development of the present organization and its products from the foundations laid by the original members of the Community many years ago. The typographical and artistic features of the pamphlet are admirable. The cover, in a cream tint, has a pressed panel, in which is suspended a rich design, the latter being caught at the top only. The cover and pages are deckle edged. Handsome illustrations in tint are applied to the pages by the same method employed with the cover design. These show the spacious edifice known as the Community Home, a picturesque landscape, including the historic Oneida Creek, and a chaste example of the Flower-de-Luce design so widely advertised. Rich greens and gray predominate in the interior decorative effects. The interesting text of the pamphlet takes the form of a simple essay, devoid of the advertising features which commonly characterize such publications.

Under the title of "Creations in New Jewelry," A. Ludwig & Son, New York, have issued a volume of 32 pages, 9 by 12 inches, with a brown deckle-edged cover. This elaborate and beautiful catalogue is not intended to present a complete list of the products made at the company's factory, 75 Nassau St., but to call attention to the variety and exclusiveness of the designs. A large number of the articles are repre-

sented by excellent pictorial illustrations, some in colors. The turquoise matrix and baroque pearls, in brooches and necklaces, are especially clear and true in color effects. The company's collection of genuine sky-blue turquoise and turquoise matrix from Persia is declared to be most comprehensive, and this is equally true of the assortment of robin's egg blue turquoise from New Mexico. In the reading matter of the book attention is called to the merits of the company's jewelry set with genuine precious stones, and a feature is also made of high-grade designs in which manufactured pearls, rubies, emeralds and sapphires are set in gold and platinum. The Ludwigs claim to have kept in the family for many years a secret of manufacturing precious stones and pearls, so as to give them brilliancy and lasting qualities.

Baltimore.

George V. Webster, who was arrested on the charge of stealing jewelry and money from Jacob Levi, was dismissed last week, as Mr. Levi declined to prosecute. John W. Webster, father of the accused, was present when his son was dismissed.

Frank Bushman was arraigned before Justice Grannan, Friday, at the Central Police Station, charged with embezzlement by his former employer, Jacob Katz, 657 Calvert building. When the warrant was applied for it was stated that the young man was employed as a salesman, and failed to make returns for money which he collected on sales of jewelry. The amount of shortage, it is charged, will reach \$139. The hearing was postponed.

Lewis Minks, head of the Minks Badge Co., was released for court Friday afternoon on his own recognizance by Justice Grannan at the Central Police Station. The charge brought against Mr. Minks is that of counterfeiting and printing illegally the label of the Allied Printing Trades' Council. Mr. Minks declared that he had full authority, under grant of an officer of a branch organization, to use the label, and that he had been instructed under no circumstances to surrender it. This point was denied by William J. Hanafin, president of the Typographical Union, who testified that authority to use the label could emanate only from the former organization, and not from an officer of any other organization not chartered by it. The contention made in Mr. Mink's behalf was that there had been a split in the trades union, and that one of the two factions was as rightfully entitled to the use of the label as was the other.

A. B. Wood, Crossett, Ark., has admitted his son into the business and the firm name is now A. B. Wood & Son.

Frank Wuerth, of Wuerth & Son, Leavenworth, Kans., will spend the month of August in the wilds of Minnesota, fishing and hunting, with a party from Leavenworth.

At the annual meeting of the stockholders of the Middletown Silver Co., Middletown, Conn., the following directors were elected for the ensuing year: Chas. Fountain, Joseph Merriam, F. L. Sage, Edward S. Davis, Middletown, and M. S. Cornell, of Brooklyn, N. Y. The old board of officers were re-elected.

ELSIE BEE'S FASHIONS.

NOVELTIES SEEN IN A LADY'S RAMBLES AMONG THE JEWELERS.

VERY handsome is a smoking set of two pieces in a silk-lined box, the gold case with a match box to correspond being decorated with a design of twisted serpents finished in pale green enamels and gold.

*

The Summer girl wishing novelty in shirt waist sets may choose a mannish style of three studs with sleeve links to match in blood coral, gold or green.

*

Sky-blue turquoise is shown with fetching effect in a neck ornament consisting of an extremely long string of round beads, in graduated sizes, that is finished with a pretty diamond clasp.

*

A new style in a gold bar pin has a square-cut green stone in the middle, while from each end of the bar depends a chain about two inches long, formed of the same small square stones, with pearls between.

*

A most charming gold purse with chain and finger ring attached is richly finished with an elaborate design in the gold, the inside of the case being furnished with a little pocket with catch and a place for cards.

*

Aside from the regulation styles in rings everywhere seen, in which choice stones are the attraction, some fancy tops are shown. One displays a diamond, a ruby and an emerald, set like a three-lobed leaf in surrounding diamond work. Another has a diamond bar likewise set in diamond work.

*

An odd pendant is of triangular shape and formed of long gold stems twisted into an ornamental design which ends at the bottom in two enameled leaf sprays crossing each other. In the center of the open design thus formed, and from the point where the leaf sprays cross, depends a large diamond.

*

One of the new styles in drop-stones is successfully exploited in a necklace wherein oblongs of fire opals are connected into a chain by beautiful diamond work, the large stone at the throat being set in a brooch-like frame. Across the front elongated drop-stones with diamond caps depend from the stones in the necklace.

*

Many charming variations continue to appear in collars. A wholly unique idea is shown in a model in which 12 rows of pink coral beads are spaced with inch-wide bars of gold embellished with a design of crickets and grasses in pale green enamels. Another novelty is a collar showing a wide band of black velvet decorated with rather odd diamond slides and a diamond clasp. A third style that is quite original is a fancy criss-cross pattern composed of diamonds alternating with green tourmalines, the pattern running down in a V-shape at the throat. From the point dangle oblong drop-stones of green tourmalines.

News Gleanings.

Geo. H. Cook & Co. have sold their store in Prescott, Ariz., to O. A. Hesla.

Gustave Lanz, Norristown, Pa., last week installed new fixtures in his store.

J. A. Robinson has purchased the business of J. H. Newell, Lyndon, Kans.

C. A. Palmer, Purdy, Mo., has purchased the store of A. B. Stroud, at the same place.

Beryl Harris, Moundsville, W. Va., has just added a large new safe to his office equipment.

W. E. Burrell & Co., Fairbury, Nebr., have been incorporated with a capital stock of \$10,000.

The death is reported of Rowena Kirkpatrick, wife of A. J. Kirkpatrick, Oklahoma City, Okla.

Tobias Johnson, Neillsville, Wis., has sold out to P. W. Nelson, Black River Falls, Wis., and retired.

P. H. Boyson, of the Boyson Co., Cedar Rapids, Ia., was married recently to Miss Harriet J. Dayton.

The Reineman-Blose Co. was recently incorporated in McKeesport, Pa., with a capital stock of \$40,000.

Extensive improvements are being made to the exterior of the store of A. Davidson, Washington, N. J.

G. A. Schlechter, Reading, Pa., accompanied by his wife, has just returned from a trip along the Great Lakes.

J. C. Mellichamp will open his new store at 70 Whitehall St., Atlanta, Ga., about Aug. 15. The new quarters are about to be renovated.

Chas. E. Dallman, Woonsocket, R. I., has just been appointed watch inspector for the Midland and Western divisions of the New York, New Haven & Hartford Railroad.

Thomas Howard was arrested in Schenectady, N. Y., about a week ago for selling cheap jewelry without a license. He was released after paying the small fine of \$1.

The new building which is being erected in Elmira Heights, N. Y., for the Enterprise Cut Glass Co., is rapidly nearing completion, and the concern expects to be able to occupy the plant within the next three weeks.

C. J. Ward, Andalusia, Ala., has sold a half interest in his business to R. E. Holman, of Ozark. The firm hereafter will be known as the Andalusia Jewelry Co. Mr. Ward will continue to manage the business.

Bert Frank, a buyer of old gold, was arrested Wednesday in Richmond, Va., on a warrant secured by Dr. Davison, a dentist, who charged him with attempting to defraud by means of fraudulent weights and measures. Frank denied the charge.

Judson C. Moyers, Jackson, Mich., has purchased the old Tomlinson building adjoining his present store. Mr. Moyers began his career in the jewelry business as a clerk in this old building 16 years ago. He intends to raze the structure and erect a modern building on the site.

A new concern has started an establishment in Camilla, Ga., known as the City Jewelry Store. The capital stock, all of which is paid in, is \$3,000. The officers are: President, C. L. Taylor; vice-president, E. E. Cox; secretary, J. C. Wilson. The firm will continue the business of C. L. Taylor.

A decision was rendered recently in favor of W. F. Bailey in the case of Albert Piefer & Bro., Little Rock, Ark., against the defendant. The plaintiffs sued to enjoin Bailey from working for Chas. S. Stiff, claiming that they had a contract with Bailey to work for them. The injunction was refused.

Last Sunday about 200 members of the Jewelers' Protective Association of Buffalo, N. Y., enjoyed an excursion and picnic at Cascade Park, a resort near that city on the Pennsylvania Railroad. It was the first outing of the season by the members of this association. There were games between different sets of factory employees.

Thieves recently broke into the store of W. W. Bugg, 132 W. Main St., Jackson, Mich., making off with nine diamond rings, 15 opal and diamond rings, six signet rings, one gold-plated bracelet, several watches and watch cases, and about a dozen ladies' chains. A reward of \$50 has been offered for the apprehension of the thieves.

E. M. Nelson's jewelry store, Williston, N. Dak., was entered recently by burglars who stole miscellaneous jewelry and other stock valued in all at about \$400. Mr. Nelson has been engaged in business in Williston only a few weeks, and all of his stock was new. He had no safe, and left his stock in the show cases. There is no clue to the thieves.

D. B. Bancroft, Detroit, Mich., has in his possession a rare relic in the form of two large copper spoons made from a mold, which antiquated utensils were in common use among our forefathers. The spoons were handed down from Adam Manwaring, grandfather of Mr. Bancroft, and they came into the possession of the grandfather in 1778, having been handed down from other ancestors.

John E. Schwarz has been appointed trustee in bankruptcy for Sternberg & Co., Savannah, Ga., and has given bond in the sum of \$10,000. Under a former action originating in the Superior Court of Chatham County, A. M. Hull was appointed receiver and ordered to dispose of the stock. Mr. Hull has now been ordered by Judge Cann to deliver all assets in his possession to Receiver Schwarz.

Mr. Gorman, of Gorman & Green, Salisbury, N. C., was instrumental in causing the arrest on Tuesday of last week of the thief who had previously broken into the home of W. H. Holt, at Spencer, and stolen a watch and other valuables. The man had offered the watch for sale to Mr. Gorman, who at once recognized the timepiece, Mr. Holt having previously given him the number of the movement.

H. Bealmear & Co., Baltimore, Md., contrary to a previously published report, are not engaged in the jewelry business in their new location, 25 W. Baltimore St., but in the regular wholesale business which they have conducted for several years as clock, bronze, art novelty, cut glass and silverware dealers. The firm's old quarters at 25 S. Charles St. were destroyed in the conflagration of Feb. 7, 1904.

Jos. H. Pariseault was taken into custody about a week ago in Fall River, Mass., on a charge of larceny preferred against him by the Foster Co., of that place. Pariseault had been a clerk in the employ of the con-

cern, and, it is alleged, systematically stole timepieces, rings, scarf pins, etc. Thirteen watches were recovered from different pawnshops where Pariseault had pledged them under various names. When subsequently arraigned in court the accused pleaded guilty and escaped upon the payment of costs to the amount of \$2.60, the manager of the concern having refused to prosecute him.

R. N. Whitford, vice-president and general manager of the Hofman Jewelry Co., Columbus, O., arrived in New York Monday, accompanied by C. W. Ernsting, San Diego, Cal., and together will have charge of an exhibition of California gems which will be made in the metropolis. Mr. Whitford and his associate, O. S. Hofman, the president of the Hofman Jewelry Co., who has been a resident of San Diego for the past year, have become much interested in the gems of California, and recently located a new tourmaline mine which is known as the Hof-Whit Gem Mine. They have also become associated with Frank A. Salmon and Mr. Ernsting in the ownership of the latter's kunzite mine, and are now interested in several other mines, among them Pala Chief, Tourmaline King, Tourmaline Queen and Homestake, which they are to actively develop. Mr. Whitford and Mr. Ernsting brought from San Diego one of the finest collections of kunzite and other California stones that has been assembled together, taking them first to Columbus and then to this city.

Report of a Diamond Find Near Lake Nipissing, in Canada.

MONTREAL, July 31.—Geologists for years have been predicting that diamonds would some day be found in a great temagami country, which lies between Lake Nipissing, in Ontario, and Lake Temiskaming, and it is now believed that at last the expected deposits have been tapped. The Rev. Father Paradis, who is well known throughout eastern Canada for the work he has done in making known the resources of the Lake Temiskaming country, was at the Canadian Pacific Railway Co.'s offices in Montreal last week, and brought the news that Adolphe O. Aubin, who represents Nipissing West in the Ontario Legislature, has in his possession a stone which is believed to be one of the largest diamonds known. The stone was secured from a man who found it in the Lake Nipissing district.

"Nearly every connoisseur who has examined it," said Father Paradis, "has pronounced the stone to be a diamond, and the discovery has naturally caused a great deal of excitement. I myself have seen the stone. It is as large as a hen's egg, and has a rough surface and a yellowish tinge. All the usual tests have been applied to it, and if these tests are infallible, then it certainly is a diamond. Mr. Aubin has already been offered thousands of dollars for it, but has refused to sell it. He is going to have it cut himself."

Father Paradis pointed out that if this stone really proves to be a diamond it will be one of the largest in the world. So far there have been no authenticated finds of diamonds in Canada, though the geologic formation is right for them.

Canada Notes.

The stock of T. Edwards, London, Ont., has been sold.

R. D. Baker has opened a new jewelry store in Milton, Ont.

Chas. Braund, Austin, Alberta, has been succeeded by E. C. Lake.

M. P. McCaffrey, optician, Halifax, has given a chattel mortgage for \$969.

Llewellyn B. Williams, optician, has given a bill of sale for \$4,700 to T. J. McNally.

Mrs. Alberta J. Hostetler, wife of Lafayette Hostetler, New Hamburg, Ont., died recently.

J. T. A. Gaucher, Maisonneuve, Montreal, was married in Toronto, Ont., July 18, to Miss Lotta Cerré, of that city.

David J. Collis, Fenelon Falls, Ont., has assigned to Peter Mitchell. A meeting of creditors was called for July 28.

The act respecting the sales and marking of manufactures of gold and silver has been passed by the Canadian Parliament.

J. Paul, head watchmaker in the store of George E. Trorey, Vancouver, B. C., passed through Toronto, recently, en route for New York.

Frank Bickerdike has presented to the winners of the trial four-oar rowing crews of Lachine the prize cups given by Henry Birks & Sons, Montreal.

Benjamin Kent, of B. & H. B. Kent, Toronto, Ont., returned last week after an extended purchasing trip to Europe, accompanied by his wife and daughter. He was impressed by the increased demand for diamonds, notwithstanding the steady rise in price. He placed extensive orders for gems, novelties and art goods.

M. F. St. John, jewelry importer and manufacturers' agent, was found dead in his office at the Temple building, St. James St., Montreal, at 2 o'clock, Tuesday afternoon, July 24. Prussic acid was the means taken by the dead man to put an end to his existence. St. John was at one time well known in Winnipeg and in the northwest, where he traveled, selling principally jewelry.

Out-of-town buyers calling on the Toronto, Ont., trade last week, included: John McClelland, Kirkfield, Ont.; H. Shephard, Paisley, Ont.; D. Beith, Sudbury, Ont.; G. J. Porte, Winnipeg, Man.; J. H. Havill, Hamilton, Ont.; J. Pequegnat, Stratford, Ont.; J. F. Van Dusen, Dundalk, Ont.; E. S. Cole, Niagara Falls, Ont.; G. A. Shaver, Arthur, Ont.; H. W. Hurchmer, Bobcaygeon, Ont.

Henry Henkle, who said his home was in Morrisburg, Ont., has been arrested on a charge of stealing two diamond rings from W. E. Hayes' store, Montreal. He was examining a tray of rings when one of the clerks noticed him slip a couple into his vest pocket. He was held in the store until detectives arrived in response to a telephone call, and when he was searched at police headquarters a check for \$185, which was supposed to be bogus, was found in his possession.

The death is reported of Wm. Mosbacher, Wichita, Kans.

C. D. Hunt, Garnett, Kans., and wife have gone to Colorado to spend their Summer vacation.

North Attleboro.

S. D. McPherson and Leroy Thompson, salesmen for C. Ray Randall & Co., were at the factory the early part of this week.

A 150 pound die fell on the toes of Frank Griffiths at the George Robson Co.'s factory, last Thursday, crushing them very badly.

Alvin Chisholm, of the Bugbee & Niles Co., was confined to his home several days last week. While stooping to pick up an article he injured his back.

George G. Waeeler and Fred H. Carpenter have gone to Rochester, N. Y., to prepare the display of the W. & S. Blackinton Co., at the big retail jewelers' convention.

Actual work commenced, last week, on the new Manufacturers' jewelry factory that will be built on Elm St. Early in the week the contract was given to E. K. Watson, of Warren, R. I., and the land was staked out several days later. The new building will be ready for occupancy by Dec. 1, if the terms of the contract are fulfilled. The trustees of the new building are: W. B. Arnold, Boston; W. W. Sherman, of the H. D. Merritt Co., and Clarence W. Fisher, of E. I. Franklin & Co.

The B. S. Freeman Co. took account of stock, last week, pending the inauguration of the new management, which was made necessary through the death of William O. Cornell, of Cornell & Andrews, Providence. In order to settle Mr. Cornell's estate a claim upon the B. S. Freeman Co., held by Cornell & Andrews, had to be disposed of. The Merchants' National Bank and the Westminster Bank of Providence and the banking house of Zimmerman & Forshay, New York, assumed the obligations, and in reorganizing the company elected John S. Scully, of Zimmerman & Forshay, president; Joseph P. Burlingame, Providence, treasurer, and Arthur M. Allen, Providence, secretary. Christopher Dobras, under the new conditions, will continue to act as superintendent of the shop, and Mr. Burlingame will care for the finances. The future of the concern will be much brighter under the new order régime, and the factory will be able to handle the big increase in business which has already been secured this year.

The hold that the vacation habit has upon North Attleboro jewelers is well illustrated by the general closing of the shops this week to allow the employes an opportunity to rest and recuperate. With but very few exceptions all the shops were closed. Those idle this week included: Riley & French, W. & S. Blackinton Co., G. C. Hudson & Co., C. Ray Randall & Co., F. M. Whiting & Co., Bugbee & Niles Co., Plainville Stock Co., Maintien Bros. & Elliot, Scofield, Melcher & Scofield, Whiting & Davis, Estate of O. M. Draper, H. D. Merritt & Co., E. Ira Richards & Co., North Attleboro Enameling Co., H. H. Curtis & Co., F. H. Cutler & Co., T. G. Frothingham & Co., Cheever, Tweedy Co., John P. Bonnett & Son, F. S. Gilbert, Fred Gorton, Furbish, Swift & Fisher, E. I. Franklin & Co., A. H. Bliss & Co., Doran, Bagnall & Co., George Robson, J. F. Sturdy's Sons Co., W. N. Fisher & Co., J. H. Peckham & Co., R. Blackinton & Co., Sturtevant, Whiting & Bigelow, and

J. O. Copeland. The majority of the manufacturing jewelers and the employes have gone to the seashores, beaches and mountains for the week. The opportunity will be seized to make the annual inspection of boilers, which the State law now insists upon.

Attleboro.

George Heywood, salesman for the Horton-Angell Co., is home from an extended trip.

The West Silver Co., Taunton, has completed extensive improvements to its power plant and working facilities.

W. D. Flagg, of the advertising department of Reed & Barton, Taunton, has been in New York lately on business.

Ernst A. Uhlig, with F. H. Sadler & Co., became a benedict last week, receiving a handsome gift from fellow workers.

The Cornell-Andrews Co., Olive St., has instituted suit against the town. The railroad grade crossing abolition work has enclosed the factory firmly between massive embankments and a river. Entrance and exit for persons and materials are now possible only by boat.

William C. Tappan, of the D. F. Briggs Co., is the popular choice for president at Windham Hill, Me. He has just returned from a visit there. During his stay he installed a water system on his model farm. The villagers asked him to extend its benefits to them, and he connected to every house at a cost of some thousands.

Col. Sidney O. Bigney, of S. O. Bigney & Co. spent last week in the White Mountains, New Hampshire. F. W. Weaver of F. W. Weaver & Co., has been staying at Cottage City with his family. Mr. and Mrs. Harry P. Kent, the former of F. W. Weaver & Co., have gone to Canada for a tour of the leading cities and points of interest. J. William Simmons, of J. M. Fisher & Co., is making his Summer home at Silver Beach, Mass. Edwin F. Leach, of the Dunbar, Leach, Garner Co., has been spending a vacation in New Hampshire. James E. Blake, of the James E. Blake Co., is at Bar Harbor, Me.

The week which closed last Saturday and the present week were chosen by a large group of the jewelry factories as the time for annual boiler inspection, shop repairs, and, in some cases, the taking of inventory. Owing to the fact that the rush of orders has continued unabated, several concerns were forced to prepare for this enforced idleness by overtime and extra exertions in the weeks preceding. Among the firms affected by this custom are A. Bushee & Co., S. O. Bigney & Co., F. H. Sadler & Co., the Mason & Howard Co., Carter, Qvarnstrom & Remington, Electric Chain Co., Bristol Mfg. Co., R. B. Macdonald & Co., J. M. Fisher & Co., C. O. Sweet & Son Co., F. W. Weaver & Co., Sykes & Strandberg, Smith & Crosby, J. T. Inman & Co., Gifford Mfg. Co., Marble & Forrester, D. A. White & Co., and the Horton-Angell Co., the latter concern resuming operations last week.

W. C. Kayser, Marshall, Minn., will engage in business at Millbank, S. Dak., where he has bought a store.

Providence.

The factory of Smith Bros. is closed this week for the annual vacation.

After a vacation spent at Far Rockaway, William Loeb is once more at his desk ready for business.

Horace and Albert A. Remington have returned from a two months' trip to Europe. They report having an excellent time.

The Outlet Co. has offered a silver cup to the nine of the Providence Amateur League which makes the best showing this year.

The news that the William B. Durgin Co. has purchased the plant of Goodnow & Co. in Boston was received with considerable interest in local jewelry circles.

Judge Brown in the Superior Court last week granted a preliminary injunction against the Washington Real Estate Co., restraining the latter from throwing off belts and cutting off the steam from the factory of Sumner & Kotler, on Calender St.

Charles Bates, said to be a jeweler in this city, was reported as having been saved from drowning in the East River by a New York policeman one day last week. Mr. Bates may belong here, but he is not known to those employers who were asked regarding his identity.

An errand boy named John McDonough, employed by J. P. Burlingame & Co., refiners, was fatally crushed by an elevator in the Calender building one afternoon last week. The boy had been sent to the shop of Silverman Bros., in the Calender building, with some wire, and in some way got caught by the elevator, it being presumed that he, with other boys, was playing about the elevator well. He died before the ambulance arrived.

W. C. Mushet, trustee in bankruptcy of the Rodman-Wise Co., Los Angeles, Cal., has brought suit in the Superior Court here against the J. G. Fuller Co. in an action of debt. The plaintiff asserts that a judgment of \$1,386.84 was secured against the firm in the United States District Court, Southern District of California, and that this has never been satisfied. Hence the suit for \$2,000 damages, the attorney for the plaintiff being E. C. Stiness.

Judge Brown in the United States Circuit Court last week handed down an opinion in the suit brought by Edwin F. Robinson against the S. & B. Lederer Co., asking that the defendants be adjudged in contempt of an injunction restraining the concern from selling a patented swivel known as the Robinson swivel. The court finds that the defendant, while technically guilty of contempt, was not wilful or intentional in its violation of the order of the court. It holds that there was no pecuniary reason why the defendant should deliberately violate the injunction, so small is the value of the swivels. The court holds that while the penalty should be such as would induce greater carefulness in the future, it should be measured by the amount of damage which the complainant has sustained through the defendant corporation's disobedience, together with the costs and legal expenses incurred by the complainant upon this application. The amount of these costs will be fixed at a future hearing, if the parties in the case fail to reach an agreement.

TO obtain in Europe, without bulling the markets, such goods as the American manufacturers and retail dealers may endeavor to put forward is a problem that cannot be solved in America.

The goods are not found there and they may not be available even in the European markets at right prices at the particular time the American buyer comes to look for them.

It takes a Gemfinder, constantly on the spot, to collect them when they can be bought most advantageously.

Our Traveling Representatives

The following traveling representatives were in Omaha, Nebr., last week: R. L. Robinson, Denison Mfg. Co.; B. J. Hirshorn, Hodenpyl & Walker; G. W. Townsend, Kreis & Hubbard.

Traveling salesmen visiting Boston, Mass., during the week, included: Joseph F. Infeld, Hendricks & Co.; E. F. Skinner, Roy Watch Case Co.; Lucien M. Zell, American Gem and Pearl Co.; Harry Oliver, Tarrant & Gismond; George H. Sylvia, Mt. Washington Glass Co.; C. Frank Burns, Pairpoint Corporation.

Lancaster, Pa., was visited, recently, by the following traveling representatives: L. Hermann; William Seckels; D. C. Daggett, Egyptian Lacquer Mfg. Co.; Thomas H. Ryland, American Watch Case Co.; Charles Melcher, Aikin, Lambert & Co.; Edwin A. Lewis, Warren W. Fulmer; T. D. Bailey, Robert S. Gatter; Albert B. Randall, W. D. Earl & Co.

Among the traveling representatives who called on the trade in St. Louis, Mo., last week, were the following: E. P. Tiffany, F. H. Sadler Co.; W. A. Burt, Cory & Reynolds Co.; W. H. Hurlbert, American Optical Co.; Charles A. Winans, B. Illfelder & Co.; Max Huss, S. & A. Borgzinner; James Baker, Frank M. Whiting & Co.; F. R. Horton, Carter, Howe & Co.; M. W. Evans, T. G. Hawkes & Co.; Leo Heilbrun, L. Engel Co.

Traveling representatives who called on the Cincinnati, O., trade, last week, included: Rudolph Noel, Rudolph Noel & Co.; A. M. Leibman, E. P. Reichhelm & Co.; Morris Shiman, Shiman Bros. & Co.; S. Marks, Columbia Jewelry Co.; S. Blackinton, S. O. Bigney & Co.; D. Skutch, New Haven Clock Co.; Albert M. Stern, Goodfriend Bros.; Otto Sinnauer, Oppenheimer Bros. & Velth; M. Ettinger, Heyman & Kramer; C. Morgan, Rogers & Bro.; Abel King, I. Emrich & Co.

The following traveling representatives called on the trade in Kansas City, Mo., during the past week: Norbert Gunzburger, L. & M. Kahn & Co.; George Goldberg, Untermeyer-Robbins Co.; Melville Untermeyer, Chas. Keller & Co.; B. Hyman, Hirsh & Hyman; H. M. Carle, Keystone Watch Case Co.; George Gubbins, Rockford Watch Case Co.; Emil Pick, Hammel, Riglander & Co.; Sam Zimmern, Henry Zimmern & Co.; Mr. Askev, New Haven Clock Co.; Mr. Travis, George F. Brown; Mr. Somes, Bates & Bacon; Hugh E. King, Queen City Silver Co. and Fessenden & Co.; B. J. Hirshorn, Hodenpyl & Walker; S. J. Gaspar, O. F. Egginton Co.

The following traveling representatives were in Savannah, Ga., recently: Louis H. Cohn, Adolph Goldsmith & Sons; E. M. Childs, E. Ira Richards & Co.; J. Bernheim, Woodside Sterling Co.; Oscar Krause, Arthur W. Ware & Co.; L. H. Wolf, F. J. Boesse & Co.; Charles S. Miller, Ansonia Clock Co.; E. Shaw, P. W. Lambert & Co.; J. T. Clark, Reed & Barton; G. W. Rowly, Chas. L. Trout & Co.; J. R. Traylor, Kremenetz & Co.; Harry E. Barkman, Jones & Woodland Co.; G. H. Sluter, Carter, Howe & Co.; Harry A. Bachman, Ciner & Seelman; C. W. Thomas, Alsopp Bros.; W. L. Miller, Wm. I. Rosenfeld; Charles Marx, Wm. McGill, Wm. B. Kerr & Co., Inc.; A. Holzinger, Fred Kaufman, M. R. Smith, La Pierre Mfg. Co.

" 28.....	.65¼	30 1-8d.
" 30.....	.647½	30d.

W. E. Archer, DeKalb, Ill., was closed recently on a chattel mortgage.

Philadelphia.

A. Dilsheimer, with his family, spent July at Asbury Park and Long Branch.

A. J. Freidel, with John F. Blisard & Co., spent a few days in York last week on a pleasure trip.

Clarence W. Jones, with E. J. Hertz, 13th and Chestnut Sts., is spending his vacation this week at Atlantic City.

John A. Kinsler, manufacturing jeweler, 1020 Chestnut St., spent the week's end with his family at Asbury Park.

Joseph Gumpert, 2218 Ridge Ave., has moved his family for the Summer to the Parkside Inn, Willow Grove.

John Blisard, of John F. Blisard & Co., 727 Sansom St., spent a few days last week in Atlantic City on a pleasure trip.

Charles Bonaffon, with the B. F. Williams Co., is reported to contemplate making a trolley trip to Boston as a vacation recreation.

The first meeting of the creditors of Francis Joseph Lingg was held July 28 before Referee in Bankruptcy Mellors, at which time claims of creditors were considered.

S. P. Ludwig, with C. W. Bixler & Co., Easton, Pa., stopped off in this city last week on his way to Atlantic City with his family, where he will spend vacation days.

E. J. Hertz, 10th and Chestnut Sts., has been elected as one of the incorporators of the new People's Trust Co., which will begin operations in the financial world about Oct. 1.

S. Bell, of the Bell-Smith Co., Atlantic City, was one of the visitors last week to this city. Others included: H. S. Kratz, Souderton, Pa., and David Krouse, North Wales, Pa.

J. B. Bechtel, of J. B. Bechtel & Co., starts this week on a trip through eastern Pennsylvania. W. E. Ross started through the western part of the State last week for a six weeks' trip.

Reports are circulated in the trade that some of the stores recently erected opposite the postoffice are to be occupied in the Fall by retail jewelers, but no confirmation can be had at this time of the rumors.

Six marbles, regarded as masterpieces, were given last week to the Academy of Fine Arts, together with a collection of oil paintings, by the terms of the will of Mrs. Sarah Harrison, a wealthy woman who died here recently.

The alertness and integrity of C. Spitz, a pawnbroker, 2222 Callowhill St., resulted last week in the arrest of the man who held up a citizen and robbed him of a gold watch and money. An attempt to pawn the watch led to their capture.

Max Polak, with M. Siekles & Sons, starts this week on his initial traveling trip for the firm, and will cover the eastern shore of Maryland trade. J. J. Zimmern starts next week on a southern trip. Elmer Horn is spending a vacation in Easton and in New York.

Ray Lanz, son of Gus. Lanz, Norristown, Pa., accepted, last week, a position with the Philadelphia & Reading Railway Co. in their time department. The company takes direct supervision over all the clocks used on the road and of the watches of their conductors and brakemen.

D. Atlas, of Atlas & Fisher, returned last

week after a trip to Antwerp and Amsterdam for the purchase of diamonds. He came back to New York on the *Vaderland* and he and Mr. Fisher then went to Atlantic City to spend a few days with their families, who are passing the Summer at that resort.

A miniature of Sarah Siddons, the actress, rare silver watches and Chinese vases of great age are among the articles stolen recently from Philip H. Rosenbach, 1320 Walnut St., a dealer with a fashionable clientele. It was afterward ascertained that John Slack, an employe, was the thief. He was arrested and the goods recovered, but when arraigned his wife pleaded so earnestly that another chance be given him that Mr. Rosenbach relented and he was discharged.

Bert J. Sternberger, a pawnbroker, 1226 Columbia Ave., instituted proceedings last week against his father, William Sternberger and George A. Doyle to obtain the cancellation of a \$20,000 judgment note which the plaintiff says he had persuaded him to sign when he placed him in business in 1900, and which was to forestall the son being caught in unfounded suits. The son declares that his father, after promising to leave the note in his possession, abstracted it and afterward delivered it to Doyle.

Philadelphia jewelers were interested last week in the dispatches from Chicago that the jewelry valued at \$10,000 stolen some weeks ago by Jacob Svoboda, alias Herman, alias Latuar, and alias Lewis Halbert, has been recovered in that city and the culprit arrested. He is to be brought without delay to this city for trial. Svoboda secured entry to the house of his victim, Mrs. Edward Welsh, in Chestnut Hill, by pretending to be a servant, and got away with the jewelry at the earliest possible moment.

No further arrests have been made as a result of the discovery a fortnight ago that gold clippings were being pilfered from the goldsmithing department of the Bailey, Banks & Biddle Co. than that of Abraham Lawrence, who was accused by Edward Williams, head of the department, with the theft of \$500 worth of gold. Lawrence is awaiting trial on the charge. The clippings were from medal shavings, and there appears to be little reason to expect that any other employes will be involved or a conspiracy unearthed.

A pathetic story of the struggles of an aged and enfeebled watchmaker to make a living was unfolded last week when Mary F. Idler, aged 65 years, died at her home, 1734 Passyunk Ave. She lived with her brother, Samuel A. Johnson, who conducts a small jewelry repair shop at that address, and had been a paralytic for three years. Neighbors said she had died of starvation. This report was partially confirmed by police investigations, but Johnson, her brother, said he had done all he could for his sister and himself was only able to eke out a miserable existence. The house was the picture of squalor, and Johnson himself looked on the verge of starvation. He had not even money to bury her, while he continues daily at his bench, and the body was interred in Potter's Field.

Dr. Harry Litchfield, who began his career as a jobbing jeweler at 7th and Chestnut Sts., and who, together with three sons,

Joshua, Henry Nathan and Dr. Paul Litchfield, was widely known in the trade of this city and New York, died last week in the 63d year of his age, at his residence, 1217 Poplar St. He had been in failing health more than a year, and his death was not unexpected among members of his family. He abandoned the jewelry business a score of years ago to practice medicine, the study of which he had pursued while engaged in business. The business was taken over by Harry Struntz, who some years ago was bought out by John B. Beehtel, who is now carrying it on, enlarged, at 725 Sansom St. The sons all began life as jewelers, but Joshua Litchfield is the only one to remain in the business. He is now with George Kelly, instalment dealer. He formerly conducted a retail store on Columbia Ave. near 20th St.

Rochester.

Joseph Kopelowitch, of Main St. E., is spending several weeks at Mount Clemens, Mich., for the sake of his health.

Morris Rosenbloom returned last Saturday from a short vacation trip to Grove Springs, N. Y., where his family is spending the Summer. Mr. Levinson, also of this firm, is now spending a few days at the same place. Traveling men for this concern are getting their samples ready, preparatory to their trip out during the first week in August.

The office and factory employes of Bastian Bros. will hold their annual picnic at Seneca Point, Aug. 4. It is expected that about 250 persons will be in attendance. The start will be made from the Court St. bridge at 7.45 o'clock in the morning, and the trip will be made in special Rochester and Eastern trains. The day will be devoted to sports of all kinds, and regulation picnic style will be the order of the day.

Some weeks ago an "eye specialist," Dr. Horace B. Hyde, was arrested in Rochester, N. Y., for having nearly impaired the eyesight of a Mr. Rabshaw by his malpractice on him. Both the Medical Society and the Rochester Optical Society interested themselves in the case, and sought to have Hyde punished for his dangerous work. Hyde, however, was set free on his promise not to practise any more. Now comes the tale that he has been practising in Cuba, N. Y., and has made himself decidedly unpopular by his work. Complaints have been received by the Rochester police, and now they are after him. A warrant has been issued on complaint of Elizabeth Rabshaw, whose brother the "doctor" mistreated.

Jewelers Gold Bars Withdrawn and Exchanged at New York.

Week Ended July 28, 1906.

The U. S. Assay Office reports:
Gold bars exchanged for gold coin.....\$350,680.11
Gold bars paid depositors..... 39,208.67

Total\$389,888.78
Of this the gold bars exchanged for gold coin are reported as follows:
July 23.....\$93,252.15
" 24..... 56,683.67
" 25..... 122,232.45
" 26..... 37,014.50
" 27..... 30,989.77
" 28..... 10,507.57

Total\$350,680.11

DIAMONDS

Lancaster, Pa.

William Holland, with George M. Bailey, Uniontown, is a proud father.

Harry B. Boyce, with J. W. Kimpel, of Pittsburg, visited Lancaster last week.

Martin Weaver, of the Ezra F. Bowman Technical School, is off on a vacation trip.

J. M. Kreider has taken a position as watchmaker with J. H. Sensenig, New Holland.

Cyrus Novinger, Halifax, has gone to Nevada on a pleasure and business trip combined.

Frank A. Huber, traveling salesman for the H. S. Meiskey Co., is spending his vacation at Atlantic City with his family.

E. R. Kant, F. A. Wheeler, W. N. Shute and Charles E. Foose, representatives of the Non-Retailing Co., have started on their Fall trip.

L. C. Reisner, manufacturing jeweler, of this city, has laid out a new suburb for Millersville, and is exploiting the sale of building lots.

William Pirosh, of Pirosh & Simmons, and wife have announced the engagement of their daughter, Miss Anna Pirosh, to Monroe Levy.

Charles Weidner, engraver, of Newark, N. J., has returned to that place after a three weeks' visit to his father, O. W. Weidner, of this city.

Walter Welcham, a department foreman of the Hamilton Watch Co.'s factory, and his wife have returned from a vacation spent by the seashore.

Warren P. Johnston was married last Thursday to Miss Martha Patterson, and the day following they left for Chattanooga, Tenn., where he expects to open a jewelry store.

W. W. Appel, who has been obliged to vacate his storeroom in the Wheatland Hotel, has secured temporary quarters in the Kepler building, occupying half of the large storeroom of Henry Gerhart.

The following jewelers visited Lancaster recently: W. J. Frazer, Lincoln; E. P. Zane, Christiana; A. C. Squires, Shippensburg; S. H. Miller, Mount Joy; H. C. Foehl, Columbia; J. H. Sensenig, New Holland; Jacob Fisher, Elizabethtown, Pa., and T. B. Helms, Hamlet, N. C.

Newark.

Members of the International Watch Co., Greenville, last night entertained their friends in Armbruster's Schützen Park.

The death of Winthrop B. Harris, Orange, N. J., said to be a manufacturer of jewelry supplies, was reported last Thursday.

Mrs. F. J. Herpers, widow of F. J. Herpers, who was the founder of Herpers Bros., manufacturers, in this city, died Saturday at Ocean Grove, aged 83 years. Her husband died in 1888. The surviving relatives include one son, Henry, who is now of Herpers Bros., and two grandsons, H. F. and F. J. Herpers, both members of the firm. The funeral will take place to-day from her late residence, 478 Washington St., in this city.

C. F. Miller is remodeling and improving his store in Cairo, Ill.

Pittsburg.

J. Loughrey Roberts, of the J. M. Roberts & Sons Co., has returned from Atlantic City. John M. Roberts leaves for that place next week.

Among the out-of-town merchants who visited Pittsburg last week were: A. F. Stanver, Wheeling, W. Va., and A. B. Kuntz, Connellsville, Pa.

S. Davis, of S. Davis & Co., is at Cambridge Springs. The store, which was gutted by fire several months ago, has been renovated and greatly improved. The firm has installed a much larger stock than formerly carried. Mr. Davis is resting because of hard work, occasioned by the fire.

Charles O'Brien & Co. last week received the order for the \$2,500 gold cup to be given by R. M. Weaver, of this city, for the best 2:15 trotters, closing as to records July 2. It will be competed for at the coming inter-city matinee meeting at Brunot's Island the last week in August. The cup is of special design, and is being made by a New York house.

The following delegates, representing the Pennsylvania Retail Jewelers Association, left Pittsburg last night to attend the National Convention at Rochester: A. C. Graul, Sharpsburg, president of the Pennsylvania Association; C. S. Wiley, secretary; J. P. Archibald, Blairsville; P. C. Yester, McKeesport, and J. F. Blazier, New Kensington. Secretary Wiley has received a number of new members since the association was organized in Pittsburg, July 10. Early in September the Pittsburg retail jewelers will meet to organize, this to be followed by a banquet at one of the leading hotels. The local organization is now being talked up by members of the State organization.

The mercantile appraisers' list last week showed that an execution for \$861 had been issued against Adolph E. Seidle by J. J. Green, but Mr. Seidle is in no way financially involved. The execution was issued by an amicable agreement, and arises over a property transaction in which Mr. Seidle was interested several years ago. It appears that a mortgage was put on the property by the man that Seidle sold to and became tangled up with in a legal sense, so in order to give the present owner a clear title, Mr. Seidle agreed to allow the judgment to be entered, and it will be satisfied. In speaking about the matter, Mr. Seidle said: "I was aware when I did this that it probably would cause me to make some explanation, but it does not involve me in any way." Mr. Seidle is one of the most responsible jewelers in Pittsburg.

The Pittsburg police has caused the arrest of a number of auctioneers, who they claim have been doing business without a license. J. H. Spandau and H. E. Young, jewelry auctioneers, who have been auctioning off goods at 443 Smithfield St., in a room which has the name Pittsburg Jewelry Co. painted over the door, were arrested last week, and arraigned for a hearing before Alderman John Groetzinger, who held both for court in the sum of \$500 bail. The license fee is \$100. It is said that the defense of the men was that they were not carrying on an exclusive auction business, but were simply selling out goods to reduce the stock, preparatory to altera-

tions being made to the store. Seven other auctioneers were also arraigned for a hearing, some of whom were held for court. Pittsburg has been overrun with jewelry auction houses, and some of the local retail dealers, it is said, have complained to the police, with the result that a raid was made on all those auctioneers who did not hold a license.

Washington, D. C.

Mrs. Myrtle L. Dean has brought suit for divorce against her husband, James M. Dean, optician, 708 13th St., N. W.

The Navy Department, through the Bureau of Supplies and Accounts, is inviting sealed proposals until Aug. 14 for furnishing a quantity of clocks embraced in schedule 70, obtainable at the Navy Pay Office in New York, or upon application to the Bureau at Washington.

H. F. Wichman, who has been in the jewelry business in Honolulu for the last 21 years, has been visiting this city, stopping at the New Willard. In commenting upon the conditions in the Hawaiian Islands, Mr. Wichman said: "The business conditions in Honolulu are good. Immediately after annexation there was a large influx of Americans, looking for business openings. There was not room for all that came then, but affairs have by this time readjusted themselves, and business will now continue to improve."

Under the terms of the will of Max Goldsmith, whose death was reported in THE CIRCULAR-WEEKLY last week, the testator's entire interest in the business of M. Goldsmith & Son is bequeathed to his son Charles, with the proviso that the latter liquidate all debts of the business or owed by Mr. Goldsmith individually at the time of his death. The remainder of the estate, real and personal, is given to Mrs. Ellen Goldsmith, the widow, for life, and upon her death to the son Charles, or his heirs. Mrs. Goldsmith and Charles Goldsmith are named as executors, the will being executed June 7 last. The Probate Court has passed an order admitting the will to probate and record, and has granted letters testamentary to the executors under a bond of \$200.

New Orleans, La.

Gabe Scooler, of M. Scooler, will remain in New Orleans for the entire Summer. Mr. Scooler had planned a trip to the north and east, but has postponed the journey until later in the year.

A. M. Hill has resumed business as formerly at his old stand in Canal St., the sale to satisfy Mrs. Hill's judgment in the recent divorce proceedings having terminated.

J. Julius Weinfurter's Jewelry Palace was again visited by thieves a few nights ago. The robbers used a sharp stone and broke the heavy plate glass window of the Bienville St. show case. From the show case they stole a tray containing opera glasses valued at \$100, and escaped with their booty.

Coleman E. Adler, who secured the contract for the silver service to be presented to the battleship *Louisiana*, is expected back from New York this week, and the committee, headed by Mayor Behrman,

will hold a conference with him to ascertain the probable length of time that will be consumed in manufacturing the handsome articles by the Frank W. Smith Co., Gardner, Mass., who designed and are now making the service. Mr. Adler telegraphed to forward to Smith stalks of sugar cane, rice and other samples of the State's products, which are to be wrought in the separate pieces of the service. It is a bad season of the year to secure good specimens of sugar cane, as the product comes with the early Winter months, but Mr. Adler's agents were able to secure several fair-sized stalks, which will serve as models to Mr. Smith's workmen. The sugar cane and rice were shipped to New York Saturday, and will be forwarded to Mr. Smith.

Omaha.

James Dorward has taken a position with T. L. Combs & Co.

T. L. Combs has returned from a trip to the Black Hills, S. Dak.

W. C. Flatau and wife have gone to Denver and Colorado Springs on a pleasure trip.

Mrs. Louis A. Borsheim, wife of L. A. Borsheim, has gone to Sullivan, Ind., to visit her sister.

C. Hansen, watchmaker for Fred Brodegaard & Co., has gone on a two-weeks' vacation to Lake Okoboji.

E. W. Keating, formerly of Omaha, but now with Otto Young & Co., Chicago, is at present visiting friends in this city.

S. D. Gustavson, of the firm of P. E. Flodman & Co., has gone on a two-weeks' fishing trip to the northern lakes of Minnesota.

F. H. Kline, formerly of the W. J. Johnston Co., Pittsburg, Pa., has taken a position as city and house salesman for the A. F. Smith Co.

Ferd Smith, Memphis, Tenn., who is visiting a son, A. F. Smith, accompanied the Commercial Club excursion to the Black Hills last week.

Mae Hayes, who was convicted of stealing a diamond from T. L. Combs & Co., was taken to the Lincoln penitentiary last week, to begin her sentence of five years.

C. C. McLees, president of the Nebraska State Optical Society, of Davenport, Nebr., with his wife stopped off here last week on their way to Rochester, N. Y., to attend the National Convention of Opticians.

The following out-of-town buyers were in this city last week: A. O. Lieber, Utica, Nebr.; P. W. Folso, Ashland, Nebr.; Seth H. Clay, Long Pine, Nebr.; Charles Reed, of Reed & Cole, Woodbine, Ia.; M. Barnes, Avoca, Ia., and John Crabill, Plattsmouth, Nebr.

Mr. and Mrs. George W. Ryan, parents of George W. Ryan, of the Mawhinney & Ryan Co., celebrated their 50th wedding anniversary last week. Over 100 friends called to congratulate them, and they were the recipients of many beautiful presents, besides a purse of gold. Mr. Ryan is a retired physician, and is 84 years of age, while Mrs. Ryan is 81 years old.

Frank Pequegnat, Riverside, Cal., has sold out his interest at that place to H. Britzius.

GORHAM SILVER

TO THE JEWELRY TRADE

¶ Attention is respectfully invited to the fact that the Gorham Company's traveling representatives have already resumed their customary activities in introducing to the Jewelry Trade the many original and exclusive novelties as well as the standard lines of silverware which have been prepared by the Gorham artificers for the approaching Fall and Holiday Seasons.

¶ In view of the period of unexampled prosperity it seems pertinent to suggest to the progressive jeweler the advantage he will gain by a careful examination of his stock so as to arrive at a speedy and discreet decision as to the directions in which it needs replenishing. Orders given now will be shipped whenever required.

OWING to the greatly increased size of THE JEWELERS' CIRCULAR-WEEKLY, it is absolutely necessary that all changes in advertisements be received one week in advance of date of publication if proof is desired. Positively no change can be made after Friday noon for the next Wednesday's issue.

A Golden Opportunity.

THE delegates from the various State associations of retail jewelers who will meet in Rochester, N. Y., Friday and Saturday, for the purpose of forming the National Retail Jewelers' Association, have resting on their shoulders a severe responsibility, for it lies with them, and with them alone, whether or no the trade of the country will have the representative and responsible association which the jewelers of the United States in all sections have wanted for many years. That a national organization will be formed is, of course, an assured fact, and that some good will surely result therefrom is equally evident; but it rests absolutely with the jewelers who attend the convention as to how strong, powerful and lasting this organization is to be.

Every delegate as well as every jeweler who participates in the work of founding the new organization should carefully bear in mind that the mere work of organization and election of officers is but the beginning and not the end of the great movement that the trade at large desires. There is the golden opportunity, and their work should not be entered into lightly or without consideration. For the first time in many years and almost for the first time in the history of the trade there will occur a gathering of jewelers with interests identical in essential particulars, but widely different in other details, who may form themselves into a nucleus that has the possibility of growing into an organization of the greatest possible size and power; for, after all, it is only a nucleus of an organization that can be formed, and it is the character of the work done by the organizers Friday and Saturday and the sincerity of those who attend, that will decide whether the new organization and the State organizations which comprise it will be composed of the leading jewelers as well as the smaller merchants of every city in the Union, or, on the other hand, whether it will remain what it starts out as—purely and simply an affiliation of State societies representing but a small proportion of the members of the jewelry and kindred trades in the various commonwealths in the Union. In all their work the delegates should open their eyes to the plain fact and fully realize that with very few exceptions the organizations represented do not as yet contain the representative members of the retail jewelry industry,

many of whom, we are sorry to say, have been holding off awaiting the outcome of the Rochester convention.

THE CIRCULAR-WEEKLY believes, and is sure, that this convention is absolutely the result of an honest effort on the part of the retailers to obtain relief from abuses from which they now suffer, and that the only possible way open for them is this formation of a body having at heart the interests of the trade, that is in the position to speak for the trade as a whole. If the organization formed is of such a character it will not only satisfy the desires of those jewelers who participated in sending delegates to this convention, but will also attract to it and to its affiliated State societies hundreds of jewelers in every State who have thoroughly desired a representative body to speak for the trade, and who have hitherto refrained from participating in the movement. If, on the other hand, the organization formed is tainted by personalities, or if in any way the great power which it represents, or can represent, is so loosely guarded that it may be directed in the interests, benefit or aggrandizement of any man, or body of men, be they retailers, wholesalers or manufacturers, it will soon lack the confidence of those from whom its membership is drawn, and will follow in the footsteps of many similar organizations that have been formed from time to time in this and in other trades, gradually dying out until it becomes a mere shadow or a name.

Which shall it be? It is for you, Mr. Delegate, and you alone, to say, and therefore you cannot be too careful in avoiding pitfalls which mark the way to decline. Remember that you have your own grievances to remedy, and your organization properly formed can by itself obtain the remedy if such is obtainable. Consider yourself and your trade as a whole, and participate in no personal controversies or strife, no matter whether those engaged therein be your friends or your enemies. Avoid the dangers that lie in the way of the "friendly list," the "black list" and the official organ, etc., etc., and remember that to some extent you are the trustee of the interests of the retail jewelry trade, and as such it is your duty to consider every question from the standpoint of no single man, organization or geographical section, but from that of the entire trade, from the Atlantic to the Pacific and from the Gulf to the Great Lakes. Above all,

LETTERS TO THE EDITOR.

Why Jewelers Should Join Their State Organizations.

WESTFIELD, Pa., July 25, 1906.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

I see by the reports in the press that jewelers in many sections are indifferent in the matter of state and national associations, and therefore ask you to publish the following for these jewelers to answer:

Do you realize, Mr. Jeweler, that the mail order houses' sales have increased in the last 10 years from five to 10 per cent.?

Do you realize, Mr. Jeweler, that last year the mail order houses did about 15 per cent. of the entire jewelry business in the United States? Do you realize, Mr. Country Jeweler, that the mail order houses are setting the price on your goods?

Are you not obliged to meet their prices in order to do business with a good many of your customers?

Are you going to fold your hands and let these concerns "Standard Oilize" you?

Now is the time to act. Send in your name to your state association, even if you have to sacrifice a few cigars to pay the dues.

They say the Lord helps those who help themselves. It is certainly proving so with the mail order houses.

I see a good many jewelers advise "home trade" argument with customers, but I find the only argument that is good for much with my customers is prices.

Let us get together and protest against the manufacturers and wholesalers selling to mail order houses, department stores, peddlers, etc. The manufacturers are hiding behind the Sherman Anti-Trust Law, but I notice they have no trouble in cutting off a jobber for reasons of their own.

Mr. Jeweler, stop kicking in your sleep, but let us wake up and kick together.

Yours truly,
C. W. PARKER.

Pacific Northwest

Joseph Bach is preparing to open a jewelry store in the new Cowles building, which is nearing completion, in Spokane, Wash.

Albert Hansen, Seattle, Wash., recently moved his stock into the lower floor of the new Lowman building, at the corner of First Ave. and Cherry St., where he has one of the most attractively furnished stores on the coast.

A young man named Miller has been arrested at Oregon City, Ore., on a charge of horse stealing. He is the same man who on the night of June 21 entered the store of A. J. Johnson and stole six watches, several chains, brooches, etc. Miller admitted he stole the stock and produced all he had with him. Some of it was traded, sold or given away, but Mr. Johnson thinks he will recover all the stolen articles.

Wm. Gardner & Son, Oregon City, Ore., have been succeeded by Wm. Gardner.

New York Notes.

The style of the E. H. Levy Silver Co., 41 Maiden Lane, has been changed to the E. H. Levy Co.

Walter Boss, of the Watson & Newell Co., Attleboro, Mass., and his bride were in New York last week.

Samuel Freeland has moved from Brooklyn to Sidney, N. Y., where he will engage in business as a manufacturing jewelry and diamond dealer.

Christian Scherfig, of the Royal Copenhagen Porcelain Co., Hudson and Chambers Sts., who has been visiting the company's works abroad, is expected back in a week or so.

F. E. Leimbach is among the New York pearl merchants now visiting the fisheries along the Wabash. George C. Schmelewski is at the fisheries in the interest of David L. Gluck.

Wallach & Davidson have given up their offices at 65 Nassau St., and now have their office consolidated with the factory at 128 Mott St., where the firm manufactures mountings.

A handsome display of art glass, including shades, globes, smokers' articles and holiday novelties, is being shown in room 322, Astor House, by a representative of the Handel Co., Meriden, Conn.

Travelers for Charles M. Levy, 90 William St., started out last week with new lines of rings and lockets, including stone charms, encrusted with emblems. The stones are buffed on both sides, and come in blood red, sard and in cherry colors.

Henry Steck, the former employe of the L. E. Waterman Co., who was arrested recently on the charge of stealing fountain pens from the company's vault, has been indicted by the Grand Jury, and it is expected that he will be tried in October.

Portions of the sidewalk in front of a number of stores on Fulton St., Brooklyn, including those of L. Simon and A. Lewin & Ash, jewelers, at 525 and 529, respectively, fell into the subway Tuesday afternoon of last week. Nobody was hurt, and the damage was promptly repaired.

Harry W. Mack, who was formerly of THE CIRCULAR-WEEKLY, and who was at one time president of the Trades Weekly Co. and editor of the *Jewelers' Weekly*, is the candidate for leader of the Anti-Quigg Republicans in the 15th Assembly District, where a particularly lively contest for control of the party is now in progress. The primary is to be held Sept. 18.

On the *Kronprinz Wilhelm*, arriving in New York recently, were several members of the jewelry trade, including E. Arnstein, of Arnstein Bros. & Co., New York; David Zimmern, of Zimmern, Rees & Co., New York; A. D. Harrington, of the Shreve, Crump & Low Co., Boston, Mass. Before going back to the "Hub" Mr. Harrington called on the wholesale district in New York.

Humorous articles are appearing in the daily papers in relation to the clock in the new Hall of Records building. Although it has been in position for some weeks, the hands of the dial point always to the hour of 10:07. According to the papers, Brooklynites and others are being misled. "Lost in Red Tape, or the Secret of the Hall of

Records Clock" is the title under which the subject is treated in one of the papers.

A number of the creditors of Simon Robinson, who had jewelry and antique stores at 1283 Broadway, Manhattan, and 1029 Broadway, Brooklyn, have accepted an offer of settlement at 40 cents on the dollar. Prior offers of 25 and 33 $\frac{1}{3}$ per cent. were refused. It is said that a majority of the creditors have signified their acceptance of the 40 per cent. offer, and that the United States District Court will be asked to approve this as a composition in bankruptcy.

More than \$1,000,000 is disposed of in the will of Charles Rubens, formerly a Swiss watch importer at New York, who died early in June at his home in Paris, in which city he has lived for many years. The will was filed in probate by Coudert Bros. To 40 relatives he bequeaths from \$5,000 to \$10,000 each. The Hebrew Benevolent and Orphan Society and Mount Sinai Hospital, of this city, each receive \$5,000. A painting of Christ by Henner is left to the Metropolitan Museum of Art.

Carl H. Weidemann, of Borrelli & Vitelli, 101 Broadway, returns this week on the *Konigin Luise* after a trip to Europe during which he passed a month in Paris buying coral and looking up novelties in French jewelry. Afterward he visited for a month with his mother and sister at Luzerne, Switzerland. A fine specimen of Edelweiss, received from Mr. Weidemann at the office of THE CIRCULAR-WEEKLY indicates that he was successful in hunting the highly-prized little flower which grows only on the loftiest and most dangerous peaks of the snow-covered mountains.

Joseph Eisenstadt, a jewelry peddler, was found early last Thursday morning, tightly bound in ropes, lying in the hallway of a tenement house at 44 Allen St. He told the police that when he left the elevated railroad station at Grand St. the night before he had been attacked by five men, who beat him until he was unconscious. He said that \$900 in money, a gold watch and a diamond ring which were in his possession had been taken. Eisenstadt was sent to the Gouverneur Hospital, where the surgeons said that it would be some weeks before he could leave the institution.

A part of the force at the assay building in New York is to be transferred to Philadelphia, where the smelting and refining operations will be conducted until a new building is erected here. The present building will be razed as soon as the work can be transferred to Philadelphia. The assay office proper, used for the purpose of receiving gold deposits, etc., will continue at New York in its present building until the structure in the rear, for smelting and refining, is completed, when the office will also be torn down and a new office building erected to correspond architecturally with the Sub-Treasury. The business with the public will not be interrupted.

At the northwest corner of John and Dutch Sts. a 12-story office building is to be constructed next year. This will necessitate the removal of a number of jewelry concerns which now occupy quarters in the present buildings at 45, 47 and 49 John St. Dattelbaum & Friedman and D. W. Beaumel & Co. are at No. 45, and H. & E. O. Belais are at No. 47. Several stationery concerns are also located in these build-

ings. There are three stores now on John St. and one on Dutch St. The new building will have a frontage of 75 feet on John St. and 105 feet on Dutch St. Work is to be begun May 1 next, so that the tenants are already looking around for new quarters. The syndicate which is to put up the new building expects, it is understood, that the offices will be leased to a considerable extent to jewelry concerns.

August Seifkins, familiarly known in Maiden Lane as "Gus," who had been with the American Express Co. for 35 years, during most of that time handling packages in the downtown jewelry district, died recently in his home, Bayonne, N. J., of a complication of diseases. Mr. Seifkins was 65 years of age. His death caused genuine regret among a large number of manufacturers and jobbers whom he had served for so many years with fidelity. Speaking of him, one of the shippers on the Lane said that he was an example of the honest and faithful class of men who have attended to the jewelry business in this district for the express companies. "In my recollection," said the merchant, "going back a great many years, not one of these men has ever betrayed his trust. Considering the fact that very valuable property is entrusted to them daily, and even hourly, this record is really notable. One or two of the assistants on the wagons, I believe, have gone wrong, but the principal men, who have charge of the wagons, have proved strictly trustworthy, their services being alike satisfactory to the express companies and to the shippers."

According to the reports from Bridgeport, Conn., the police of that city have identified James McCrosson, who was arrested in New York two weeks ago on a charge of stealing three pearl studs from A. Frankfield & Co., 38 W. 34th St., in this city, as a man who was convicted some years ago. After McCrosson's arrest the New York police sent out inquiries to the police in other cities asking if they had any information about the prisoner. The Bridgeport police said that the photograph and measurements were those of James McMoulton, who was recently released from State prison after serving a two years' sentence for an offence similar to the one committed in New York. McMoulton was arrested July 29, 1903, in Bridgeport, after he had exchanged imitation diamonds for real stones in the stores of Isaac Brush and G. W. Fairchild & Sons. In each case he entered the store, pretending that he wished to make a purchase, and while examining the jewelry made the substitutions. The stolen diamond was missed directly after he left the Brush store, and he was pursued and captured. His conviction followed, and on Sept. 10 he was sentenced by Judge Gager, of Bridgeport. This information was forwarded by the police of that city to New York. McCrosson, who is said by the New York police to be known also under the name of Chalmers, is accused of obtaining the studs from the Frankfield store in the same manner in which McMoulton robbed the Bridgeport stores.

Richard Friedlander, of R., L. & M. Friedlander, 30 Maiden Lane, returned this

(Continued from page 65.)

week on the *Amerika*, after an extended stay in Europe, purchasing diamonds.

J. Abelow, who for several years has been in business in Maiden Lane, recently opened a retail store at 5005 Third Ave., Brooklyn, N. Y.

The Keystone Watch Case Co. last Friday declared its regular semi-annual dividend of $3\frac{1}{2}$ per cent. on the common and $3\frac{1}{2}$ per cent. on the preferred stock.

N. Langford, watchmaker, formerly of 51 Maiden Lane, and for the last 12 months with B. Rainess, has severed his connection with the latter and has opened a retail store at 962 Amsterdam Ave., near 107th St.

Archie Rutherford, formerly sales manager in charge of the New York office of the H. A. Kirby Co., is now connected with Powers & Mayer, diamond importers and manufacturing jewelers, 258 Fifth Ave.

W. H. Kinna, New York manager of the Elgin National Watch Co., returned last week from Sharon, Wis., where he went to attend the funeral of his mother. The sincere sympathy of the trade is extended to Mr. Kinna in his bereavement.

John E. Lomberg, 1534 Third Ave., is one of the witnesses in the case of Peter Caratza, accused of sending "Black Hand" letters to J. M. Marx, of Miller & Marx, lawyers. Mr. Lomberg was one of a number of the lawyer's friends to whom letters were sent.

Miss Flora Scheer, the 19-year-old daughter of William Scheer, jeweler at 544 Fifth Ave., last week saved a man from drowning in the surf off Arverne, L. I. She was bathing, and hearing his cries for help went to his assistance, keeping him afloat until a life guard reached them.

Samuel Chapin, of S. Chapin & Sons, retail jewelers of Oneida, N. Y., is one of the nephews of Russell Sage, to each of whom is bequeathed \$25,000. The Chapin family in Oneida, according to a report from that city, is quite numerous, so that in all \$250,000 of Mr. Sage's money is to go to that city.

About 500 people enjoyed the annual outing given a week ago last Saturday by Stern Bros. & Co.'s Mutual Benefit Association. The party took a boat at West 22d St. and went up the Hudson River to a grove near Newburgh, N. Y., where the day passed most enjoyably, being enlivened by athletic contests, music and dancing.

Julius Boasberg, of H. & J. Boasberg, 1358 Broadway, last Thursday caused the arrest of Max Heine on the charge of pawning a pair of diamond ear-rings bought from the firm on memorandum. Heine, who is 22 years of age, and lives at 63 E. 106th St., was held for trial in \$1,000 bail in the Jefferson Market Court.

It is announced by the Jewelers Board of Trade that A. C. Becken, of Chicago, will buy the business of J. H. Purdy & Co., Chicago, provided that the creditors accept 60 cents on the dollar. Mr. Becken has for a long time been anxious to add a tool and material department to his jobbing business, and as J. H. Purdy & Co. were willing to discontinue business, Mr. Becken took advantage of the opportunity. It is

thought that J. H. Purdy's creditors will accept the offer. If the deal goes through the new department of A. C. Becken will be turned into a stock company. J. H. Purdy & Co. are one of the oldest houses in their line, the business being established in 1875.

Theo. Bendus, a watch repairer giving his address as 24 W. 34th St., and another man were arrested last Friday on a charge of attempted smuggling. They were passengers on the steamship *Pretoria*, and are said to have concealed in their baggage a number of ermine furs and other articles. United States Commissioner Edward Russ in Hoboken held the two men in \$500 bail each.

Louis L. Grey, in business as Louis L. Grey & Co., at 71 Nassau St., is not associated with L. & B. Lehr, at 47 Maiden Lane, the two concerns being entirely separate. Mr. Grey wishes the above announcement made, as he thought that there was a possibility that a paragraph in last week's issue announcing the dissolution of his old partnership might be misunderstood.

Reuben Richman, 22 years of age, who said that he is a jewelry peddler and lives at 166 Eldridge St., was passing along Rivington St. on Sunday night when a woman pounced upon him and declared that he was her husband, who had deserted her two years ago in Russia. He denied that he ever saw her before. In the Essex Market Court, to which the two were taken, he was discharged, as the woman could not prove that he was her husband.

A man described in the daily papers as "Charles Bates, a wealthy jeweler of Providence, R. I., weighing nearly 300 pounds," fell into the East river as he was walking along the gangway with his wife to board the steamship *Kennebec*, bound for his home. Policeman McDonough made a thrilling rescue, jumping into the water after the jeweler. The men came to the surface close to the paddle-wheels, but the policeman clung to the unconscious jeweler until 'longshoremen with a rope rescued both. Friends in this city said that, while the weight was exaggerated in the published accounts, the jeweler was the administrator of the estate of the late Joseph M. Bates, of Bates & Bacon, Attleboro, Mass.

The New York store of the J. B. Owens Pottery Co., 70 W. Broadway, is being divided, and one-half will be occupied by John H. Ling, formerly buyer of the Siegel Cooper Co., who will represent several cut glass concerns. Mr. Owens will retain the other half for the display of specialties in pottery. He is the president also of the Zanesville Tile Co., 147 W. 23d St. The two concerns are separate, each having works at Zanesville, O. The pottery salesrooms on West Broadway were formerly in charge of W. H. Dunn, who some months ago engaged in business for himself as agent for several china and pottery concerns. Since Mr. Dunn's departure the salesrooms have been in charge of James M. Stewart.

P. H. Schonboud, Dodge Center, Minn., has filed a petition in bankruptcy, giving his liabilities as \$1,583 and his assets as \$1,783, of which \$715 is claimed to be exempt.

Boston.

W. E. Woodman & Co. have moved from 500 Washington St. to 162 Tremont St.

E. M. Stanton, of Stanton & Glover, has been on a trip to Maine for a mid-summer vacation.

Charles W. Finlay, of A. Paul & Co., is at Warwick, Mass., for a brief respite from business.

D. C. Percival, Sr., of D. C. Percival & Co., passed the greater part of the month of July at Bethel, Me.

Frank W. B. Pratt, of the clock house of Daniel Pratt's Sons, returns, this week, from a three weeks' trip to Cape Porpoise, Me.

George B. Wilson, formerly shipper for Nelson H. Brown, is receiving congratulations from his friends in the trade on account of his wedding, announced to take place to-day.

Edgar W. Hodgson, watchmaker and jeweler, 56 Devonshire St., will remove to 27 State St., this month. Mr. Hodgson has returned from an outing cruise with the Boston Yacht Club, along the North Shore.

The remodeling work that is in progress at the store of A. Stowell & Co., 24 Winter St., is of an extensive character, and will completely transform the old facade into a very handsome exterior, in strong contrast with the rather unpretentious appearance which it has presented in the past. Large and handsome windows for display purposes will be a feature.

One of the papers last week published a story of United States treasury agents working to catch an organized band of expert smugglers who have been bringing diamonds and other articles into this port. Inquiry in the trade and at the Custom House failed to verify the report, or to obtain any details as to the work being done by the government agents.

William Parry Kennard, who died July 22 at Cazenovia, N. Y., from ill health, was the son of William H. Kennard, one of the founders of the great jewelry firm of Bigelow, Kennard & Co., this city. The deceased was born in Boston, Sept. 15, 1863, and after receiving a technical education went into the textile business. He was later secretary of the United States Sugar Refining Co.

The police, last week, were unable to find any clues which would lead up to the arrest of a thief who stole a large and valuable diamond from the store of Freeman & Taylor, 61 Temple Pl., some time ago. Several inspectors and the officers of the Lagrange St. Station, worked on the case. The man was about 35 years old, 5 feet 8 inches in height, and weighed nearly 180 pounds. He carried an overcoat on his arm.

Alterations in the store of the Smith, Patterson Co., since the concern leased the entire building at 52 and 54 Summer St., have been in progress steadily, and the handsome first floor retail department, now nearly completed, is one of the finest in the city. The changes have been made without interruption to business, although the store has been operated, of course, at a disadvantage. The wholesale department, formerly at the rear of the retail department, and in the basement, is now on the second floor.

Ball's Official Standard R. R. Watches

WHAT WOULD YOU GIVE FOR A LIFELONG CUSTOMER?

Try this plan:

Sell your next watch customer a "Ball."

Its reliable performance will convince him you are a dealer to be depended on—he'll keep coming back for other things.

The watch will win you his business and friendship for always.

Write for booklet, and watch this space.

We want to add a lot of new friends to the Ball family of railroad watch dealers.

CHICAGO, WEDNESDAY, AUGUST 1, 1906.

No. 26.

Chicago Notes.

A. M. Keasey is the new city salesman for Graffe & Stauek.

C. A. Stenfelt, jeweler and optician, is starting in business in Austin.

M. F. Barger, of M. F. Barger & Co., is spending a few days in Michigan.

A. W. Sproehnle and family are spending the Summer at Lake George, N. Y.

S. F. McLaughlin, with Sproehnle & Co., has just returned from his vacation.

A. L. Fuller, of the Towle Mfg. Co.'s force, is on a vacation and fishing trip.

John J. Decker, of the Wm. A. Rogers, Ltd., force, is at home nursing a broken leg.

Emil Braude, of Emil Braude & Bro., has just purchased a new home on Marshfield Ave.

H. E. Richards, with E. V. Roddin & Co., has just returned from a vacation in the west.

A. Nordahl, of Nordahl & Ohlsen, 449 Milwaukee Ave., is enjoying an outing in Michigan.

H. M. Carle, manager of the Keystone Watch Case Co., is on a short trip to western cities.

H. Holtman, of Holtman & Alter, is spending a three weeks' vacation at Ottawa Beach, Mich.

Isidor Drexler, city salesman for Meyer Joseph & Co., has been on the sick list for the past week.

Frank Shinn, of Charles L. Trout & Co., New York, spent a few days with friends here, recently.

W. E. Hayward, representative of the Alvin Mfg. Co., is taking an outing at Eagle River, Wis.

Herbert L. Joseph & Co. have filed a certificate to decrease the capital stock from \$100,000 to \$50,000.

Ole C. Land, 344 Milwaukee Ave., is making a visit of a few weeks in California and other western points.

G. A. Jewett, of the Chicago office of Hamilton & Hamilton, Jr., has been making a short trip in Michigan.

R. T. Kleckner, with the Theo. W. Foster & Bro. Co., has just returned from a successful trip to the coast.

G. M. Landon, representing the Homan Silver Plate Co., has returned from a vacation at Eagle Springs, Wis.

W. H. Loud has been in Chicago for the

past few days buying his opening stock. He will locate at Jackson, Mich.

R. E. Hill, George T. Lester and Carl Wolff, of the New England Watch Co., have started out on their Fall trips.

L. F. Dresser was in the city recently buying stock for the new store which he is opening at Michigan City, Ind.

W. G. Fisher, of the Wm. Donaldson Co., Minneapolis, stopped a few days in Chicago on his way to eastern points, last week.

Burton E. Chapman, of the Elgin National Watch Co. force, has just returned from an extended vacation in the Rocky Mountains.

D. Axman, manager of the Chicago office of the J. D. Bergen Co., will take a short vacation in Michigan and then will visit eastern points.

Charles Price and wife, Jacksonville, Ill., have been enjoying an outing at Mackinaw, Mich. They visited the trade here on their way home.

F. G. Thearle, of C. H. Knights & Co., has been spending some time of late at Lake Geneva. He is the president of the Chicago Club at that place.

E. J. Moore, a jeweler at Sidney, Australia, visited the factory of the Elgin National Watch Co. and spent some time with the trade here recently.

Oscar Sehnert, the popular foreman of the F. E. Morse Co., is making a tour of nearby rural points by horse and carriage. His family accompany him.

H. Schwartz is making a trip to Atlantic City and eastern points, where he hopes to spend an enjoyable vacation. He will return to Chicago about Aug. 15.

Max Mayer, with the Western Watch Case Co., left recently for a pleasure trip to Yellowstone Park and vicinity. He will return in the early part of August.

Albert E. Wuerterman, Champaign, Ill., is improving the appearance of his store as well as adding greatly to his facilities of display by putting in a new front.

Arthur E. Fairbanks, of Raton, N. Mex., visited the trade here a few days last week, stopping with his sister while in Chicago. He will visit eastern points before returning home.

C. H. Knights, of C. H. Knights & Co., has just had completed a new cottage at Lake Geneva, which he is now occupying with his family. Mr. Knights, however, ar-

ranges to be at his office a few days each week.

C. A. Vanderberg, Superior, Wis., is closing out his stock at that place by auction. He proposes to locate at Seattle, Wash., and was in Chicago recently buying stock for his new location.

J. A. Limbach, manager of the Chicago office of the Theo. W. Foster & Bro. Co., is visiting the factory at Providence, R. I., and other eastern points. Mrs. Limbach accompanies him.

Sol Hess, of Rettig, Hess & Madsen, and Oscar May, of Moore & Evans, are taking an outing in Michigan. They will visit the new factory of the Star Watch Case Co. at Ludington before they return.

H. C. Stern, now located at State St. and Garfield Boulevard, will remove to larger quarters in the fine, new building on Garfield Boulevard, a few blocks to the east, as soon as the building is completed.

E. M. Lunt, the manager of the Chicago office of the Towle Mfg. Co., is looking especially happy these days. A fine baby boy, which arrived at his home some few days ago, may have something to do with it.

Charles Connors, alias the "busy burglar," was arrested in St. Paul last week, and was brought here. The prisoner is believed to be the head of a notorious gang of thieves who have committed many robberies here, and the Chicago police think if he is the man they want they can connect him with the theft of jewelry last November from the Bauman Jewelry Co.'s show window.

The bid of \$150,000 made by C. D. Fahrney for the entire stock, fixtures and good will of the Cash Buyers' Union has been provisionally accepted by the trustee, Chas. L. Billings. This bid, which is \$20,000 higher than any other bid offered so far, will be confirmed by the court on Aug. 15 if no objections are raised by the creditors, or if no higher bids are received prior to that date. This will allow about \$125,000 to be distributed among the creditors representing accounts of nearly \$300,000.

At a meeting held at 3 p. m. Friday afternoon, July 20, the following members were elected officers of the American Horological Society for the ensuing year: President, Ed. J. Koch; first vice-president, A. W. Strickler; second vice-president, Loren L. Boyle; third vice-president, B. Kirner; treasurer, A. C. Becken; secretary, C. L.

ings and Diamond Jewelry.

SHIMAN BROS & CO.
87 MAIDEN LANE, N.Y.

LONDON: 50 HOLBORN VIADUCT.
AMSTERDAM: 2 TULP STRAAT.

FACTORY:
1, 3, 5 GOLD STREET.

IMPORTERS MANUFACTURERS

Hoefer. Directors: Max Ellbogen, Benj. Allen, Julius Schnering, C. H. Knights and C. E. Walker. The hour of meeting was changed from 8 p. m. to 3 p. m. every third Wednesday in the month.

The jewelry store of L. A. Horn, 442 N. Clark St., was visited by a sneak thief last week, who got away with a tray containing 25 diamond rings, valued at \$800. A young man came into the store and asked to have a watch case weighed. After the weight of the case was told to him, he wanted the joint pins removed. On being told that it would take some time to do this he went out, promising to return shortly. Within a very few minutes after he had gone out, Mr. Horn noticed that a valuable tray of rings was missing, and that the sliding door on the inside of the show case was open. The police were promptly notified of the theft, but no hope for the recovery of the jewelry is entertained. Mr. Horn has been in business at this location for the past 25 years, and this is his first experience with sneak thieves.

Among the out-of-town buyers that visited trade here during the past week were the following: Henry Liebenow, of C. Liebenow & Son, Manitowoc, Wis.; John Walsh, Delphos, O.; Henry W. Gram, of Gerlach Drug & Jewelry Co., Carroll, Ia.; G. A. Goodale, Lenox, Ia.; C. E. Hobson, Chariton, Ia.; S. H. Ledden, Sedan, Kans.; H. B. Clark, Rantoul, Ill.; W. P. Reichert, Canton, Ill.; A. F. Hall, of Hall & Sayles, Janesville, Wis.; G. Anderson, Taylorville, Ill.; A. H. Frandsen, Monmouth, Ill.; B. H. Britton, Hampshire, Ill.; L. H. Holbrook, Kenosha, Wis.; Jonas Carlson, Cadillac, Mich.; M. B. Fitch, Buchanan, Mich.; George Chapman, of Chapman & Armstrong, Galesburg, Ill.; John Luckenbach, of Luckenbach & Co., and wife, Los Angeles, Cal.; J. W. Spence, Racine Jewelry Mfg. Co., Racine, Wis.; J. M. Bigwood and wife, Terre Haute, Ind.; W. D. Roeder, Dwight, Ill.; G. H. Wilson, Griggsville, Ill.; E. L. McDowell, Arkansas City, Kans.; M. J. Soukup, Decorah, Ia.

Formal letters of administration were filed by the Public Administrator in the estate of M. Lippert under date of April 26 of this year. The assets consist of two suburban lots in Chicago and jewelry merchandise contained in two trunks and appraised at \$5,700, of which about \$2,000 is in diamonds. This stock is in the custody of the Public Administrator, and will probably be disposed of in September to the highest bidder. The outstanding accounts amounted to \$7,000 to \$8,000, a small percentage of which has already been collected. The first payment to creditors will be made in April, 1907, and the balance at the close of the administration of the estate, which, in Illinois, is two years after filing letters of administration. Following is a list of creditors, so far as known: Bonner & Co., \$860; B. A. Ballou & Co., \$94; Daggett & Clap Co., \$84; S. K. Grover Co., \$28; Hutchison & Huestis, \$87; Hirsch & Flashner, \$1,538; H. C. Lindol & Co., \$87; George L. Paine Co., \$90; Parks Bros. & Rogers, \$10; Plainville Stock Co., \$59; Rodenberg & Smith, \$101; Shiman Bros. & Co., \$1,018; J. J. Sommer & Co., \$47; Thornton Bros., \$133; Julius Wodiska, \$137; C. A. Marsh & Co., \$130; Zimmern, Rees & Co., \$603.

Cincinnati.

C. C. Stoner, of Lindner & Co., will leave this week for the west.

Lee Loeb, of Herman & Loeb, will visit the eastern cities this week.

D. Jacobs, of D. Jacobs & Co., and family is spending the Summer at Atlantic City.

Joseph Miller, of Moers & Miller, Wabash, Ind., was a visitor to the city last week.

Edward Bohmer, watchmaker for Benj. Greenwald, is reported as seriously ill at his home.

J. C. Daller, Sr., manager of the Clemens Oskamp Co., is making his regular western business trip.

A. A. Oaks, manager for the Oskamp Jewelry Co., has returned from an enjoyable Lake trip.

Joseph Hornback will leave this week on his first road trip for Albert Bros. through Indiana, Ohio and Michigan.

M. C. Costello, bookkeeper for Thoma Bros., is again at business after a sojourn at Kentucky mineral springs.

George Gruen, secretary of the D. Gruen, Sons & Co., and wife are staying a few weeks at Clark's Lake, Mich.

Henry Birkenbusch, Pekin, Ill., stopped here last week en route from the skat players' convention at Buffalo, N. Y.

William Pfueger and William Eichelberger, of Joseph Noterman & Co., are home from a fishing trip spent in Michigan.

H. Peck, manager for Wallenstein, Mayer & Co., is much elated over his new title, "grandpa," occasioned by the recent arrival of a granddaughter.

Clarence C. Buehrig, Minier, Ill., has gone out of the repair business and has accepted a position with the Consolidated Time & Lock Co., of this city.

Leonard J. Fox, of the Gustave Fox Co., leaves this week on his usual Pacific Coast trip; B. Ganz, of this house, is home from his eastern trip, and L. Scooler has left on a business trip in the middle west.

Frank Herschede, of the Frank Herschede Co., with his family, is making his annual automobile tour, which will include New York and way points. Charles Lucius, of this firm, leaves Aug. 2 on a pleasure tour through the eastern cities.

The engagement of Miss Ohlen Holland, daughter of John Holland, of the John Holland Gold Pen Co., to Archer Griffin Dean, Avondale, a member of the Dean Gas Engine & Foundry Co., Newport, Ky., is announced. The wedding is to take place in November.

Out-of-town dealers who replenished their stocks here during the past week included: G. H. Becker, of Blumenthal & Becker, Murfreesboro, Tenn.; Herman A. Rohs, Cynthiana, Ky.; J. C. Meyer, Madison, O.; C. V. Loss, Athens, O.; E. Mueller, Hamilton, O.; Blumberg Bros., Chattanooga, Tenn.; W. H. Mueller, Stanford, Ky.; C. E. Salisbury, Ironton, O.

A young lady of refined appearance recently called at Joseph Mehmert's retail store, Freeman Ave., and asked to see some diamond jewelry. After selecting several fine pieces, for which she said she would call later, she left the store. Soon afterward it was discovered she had substituted an imitation stone for one valued at about

\$100. The girl has not yet been apprehended.

Miss Jean Huntoon, several years a representative of an eastern firm, has lately joined the selling force of the John Holland Gold Pen Co., and her territory will embrace the middle States. Mr. Baumgarten, who has been in the fountain pen business for several years, will represent this house in the Atlantic seaboard cities, and have headquarters in Washington, D. C. As yet the vacancy caused by the death of E. O. Pratt, late manager of the New York office, has not yet been filled, but the office will be retained as heretofore.

Cleveland.

The daily press has announced that Curran Bros., jewelers at Zanesville, have filed a petition in bankruptcy. The assets are given as \$27,000, and liabilities \$40,000.

D. M. Redgeway, formerly with E. & J. Swigart, of Cincinnati, has joined the traveling force of the Sigler Bros. Co. He will probably travel a portion of Ohio, and give some attention to Cleveland business.

The Brunner Bros. Co. has tacked up a placard on the street show case that was robbed a few days ago, as follows: "The man that took the jewelry out of this case in broad daylight Saturday, 11 A. M., and left his hat, can have same by calling for it—if he wants it."

L. M. Sigler, of the Sigler Bros. Co., has just returned from his annual trip to the European diamond markets. C. C. Sigler, with his family, has gone to his country home near Warren. Frank Bromley, engraver at this house, returned a few days ago from St. Clair flats.

Capt. R. E. Burdick, of the Bowler & Burdick Co., will return from his annual trip to the diamond markets of Europe about the middle of August. While in Germany he will make arrangements for a large supply of the well-known anniversary clocks, for which the company is United States agent.

Out-of-town visitors in the city the past few days are as follows: L. J. Goddard, Ravenna; J. E. Beck, Martins Ferry; W. B. McCulloch, Greenwich; W. N. Crow, Millersburg; Frank Dyer, Caro, Mich.; F. D. Crampdon, Burton; Mr. Albaugh, of Albaugh & Son, Hillsdale, Mich., and H. S. Sumner, Akron.

Malcolm Sickles has accepted a position as traveling salesman with the Scribner & Loehr Co., taking the place of A. E. Knight, who resigned to go into the retail business at 8620 Hough Ave., this city. Mr. Gleason, son of J. P. Gleason, of Big Rapids, Mich., has also joined the traveling force of this company. All the salesmen will be on the road with their Fall samples this week.

O. T. Loehr, of the Scribner & Loehr Co., is spending a few days fishing at the headquarters of the Castalia Trout Club, a few miles from Sandusky. George Eroo returned a few days ago from a two weeks' sailing trip in his yacht on the lakes. The matrimonial fever seems to have struck this house with full force, several weddings having already occurred. Saturday William Strath, of the wholesale department, was married to Miss Lucy Mc-

Keon, and within a short time Miss Anna Rosenberg will become the bride of Joseph Brown, of this city.

Kansas City.

C. P. Kionka, of Kionka & Kionka, is expected to return from his Colorado trip this week.

F. A. Ricketts, of this city, enrolled during the week with the Southwestern Optical College.

August Stuhl, of the Kansas City Polytechnic Institute, will leave soon for a vacation trip.

J. Levin, traveler for Kionka & Kionka, who came in last week from a trip in Iowa, is again on the road.

E. S. Kimber, a veteran retail jeweler of this city, has moved from his old location on Union Ave. to 1417 Grand Ave.

H. F. Rover, with the Woodstock-Hoefer Watch & Jewelry Co., went down to Excelsior Springs last week to pay a visit to his family.

Mr. Crerston, of the Kansas City Watch Case Mfg. Co., is enjoying a visit from his brother, W. T. Crerston, who is spending his vacation here.

L. Weixelbaum, formerly with the Barr-DeVault Jewelry Co., has resigned and engaged in business for himself on the fourth floor of the Missouri building.

M. Abrahamsen, who had been with Gurney & Ware, has resigned to take a position in the manufacturing establishment of Hassig & Krieke Jewelry Co.

C. C. Hoefer, of the Woodstock-Hoefer Watch & Jewelry Co., will leave next week for Plum Lake, Wis., accompanied by his family, for a vacation trip of a couple of weeks.

J. E. Brogan, St. Paul, Kans., was in this city last week, accompanied by his wife. They were on their way home from Denver, where they had been attending the Elks' convention.

Dr. S. W. Lane and wife left last week for Rochester, and from there will go on a 30 days' rest trip. During their absence both the Southwestern Optical College and the office will be closed.

James Potts, the well-known traveler of the Edwards & Sloane Jewelry Co., has just returned from a successful trip through Missouri, and is filling up his trunks with new patterns for another trip.

A. J. Roberts, who has been taking a course in engraving in the Kansas City Polytechnic Institute, has returned to his home in Chanute, Kans., and resumed his old position with H. E. Conklin.

The following out-of-town jewelers called on the trade here last week: F. G. Burgy, Brunswick, Mo.; Roy R. Smithers, Cameron, Mo.; Dr. Carder, of Bodley & Carder, Quenemo, Kans.; H. W. Seltz, Clay Center, Kans.; C. D. Hunt, Garnett, Kans.; Harry Kelly, Erie, Kans.; Leslie White, Lee's Summit, Mo.; Otto Burkland, Osawatimie, Kans.; Will H. Wright, Webb City, Mo.

A forged check for \$7.65 was recently presented at the store of A. B. Allen, S. Union Ave., Pueblo, Colo. J. L. Bowers, who was later arrested on a charge of writing and signing the check, which was presented by another man, protested his innocence and declared that he could not even write.

AT YOUR JOBBER

St. Louis.

The firm of Ben Barnett & Co. has moved from 607 Pine St. to 203 N. 6th St.

The Crescent Loan Co. has moved from 7 N. Broadway to the northeast corner of 6th and Pine Sts.

W. A. Gill, 612 Olive St., is spending his Summer vacation by taking week-end fishing trips to St. Clair, Mo.

F. J. Bross, of the L. Bauman Jewelry Co., departed Monday of last week for a trip over his territory, Illinois.

J. S. Loftis, of Loftis Bros. & Co., visited Manager Williamson of the local branch last week, coming down from Chicago.

S. Ruby, 511 N. 6th St., will shortly improve and enlarge his place of business. He will take in 16 more feet on the north side.

George Emiling, with Herman Mauch, 506 Franklin Ave., and Miss Lillie Beneke were married Saturday. They made a short western honeymoon trip.

W. F. Kemper, 2326 Franklin Ave., has increased his working force by the addition of Fred Hellmuth, a jewelry repairer, formerly with the Eisenstadt Mfg. Co.

E. W. Bornmueller, buyer for the silverware department of the Mermod, Jaccard & King Jewelry Co., has returned from his vacation, which he spent in fishing in Michigan waters.

Jules Franklin, H. W. Raymond, of Worthington & Raymond, and L. A. Epstein, of L. A. Epstein & Co., all of New York, were among the jobbers who called on the local trade last week.

Paul Deckelmann has resigned as secretary of the H. G. Bergfeld Jewelry Co. W. K. Bergfeld, who is now manager of that company, will make a trip through Illinois the early part of August.

F. L. Jaccard, Texas representative for Bauman-Massa Jewelry Co., stopped over in this city last week. With his family he was en route home after a vacation trip in Minnesota.

The decision of the Retail Jewelers' Association of Missouri not to give the annual picnic this year is not being taken as final, and strong pressure is being brought to bear to cause the association to reconsider its action. The prospects now are that the picnic may yet be given.

Mr. and Mrs. Frederick W. Drosten departed recently for New York, whence they sailed yesterday on the *Kronprinz Wilhelm* for an extended trip abroad. They will visit London, Antwerp and Paris. Mr. Drosten while abroad will purchase precious stones for the F. W. Drosten Jewelry Co.

The piscatorial prowess of Herman Mauch, president of the Retail Jewelers' Association of Missouri, was described in *The Republic* of last Sunday. A photograph showing a big catch was given. Mr. Mauch is also vice-president of the Montezuma Hunting and Fishing Club on the Illinois River.

E. Dick Richards, of the Maschmeyer-Richards Silver Co., is now on the road, traveling through Missouri, Kansas and Nebraska. Other members of the traveling staff of that firm are Erbin Schoenle, formerly with the A. J. Jordan Cutlery Co., St. Louis, with territory in Texas, Oklahoma and Indian Territory, and Walter

Woods, who will work in the north and northwest.

Among the visiting jewelers in St. Louis last week were the following: J. H. Greer, Fort Worth, Tex.; Charles S. Erber, Texarkana, Ark.; Mr. Cook, of Mushert & Cook, Sherman, Tex.; W. H. Wheeler, Palmyra, Ill.; John Roark, Winchester, Ill.; H. Chamber, Bonne Terre, Mo.; M. Ziegler, Kimmswick, Mo.

Pacific Coast Notes.

Louis and Harry Lefkowitz, diamond merchants, New York, are visiting in Los Angeles, Cal.

H. C. Paulson, manager of the store of J. Johnson, Sonora, Cal., visited San Francisco last week.

The wholesale jewelers of Los Angeles, Cal., with two exceptions, have arranged to close their stores at 1 p. m. on Saturdays, until Sept. 1.

M. W. Jenks, for many years in the retail jewelry business at San Diego, Cal., died suddenly of heart failure at his home in that city, aged 48 years.

It is thought that the New Padarra Mexican Onyx Co., which is developing an onyx mine at Santa Catherina, Lower California, will soon establish a factory for the finishing treatment in San Diego, Cal.

Worth Merritt, a member of the San Diego Gem Co., San Diego, Cal., has been missing for several weeks, and it is believed that he has been lost in the Colorado Desert. Mr. Merritt's wife and mother are anxious for news regarding his whereabouts.

The firm of T. Goodman, which operated three jewelry stores in San Francisco, all of which were destroyed by the fire, has opened a store in Stockton, Cal. The company is located at 112 E. Main St., will carry a complete line of jewelry, and, later, will add an optical department.

S. Huppert, 39 N. El Dorado St., Stockton, has been charged with grand larceny. It is alleged that Huppert made away with a watch valued at \$100, which was left with him to be repaired. A warrant has been issued for his arrest, but it is thought he has gone to San Francisco.

The store of D. A. Reid, Vacaville, Cal., was robbed last week while Mr. and Mrs. Reid were calling on a friend. The thief gained an entrance by cutting the wire screen and going through a rear window which was open. The sum of \$165 in money was taken, with 25 gold and silver watches and a case containing 36 gold set rings. The robbery was reported to Constable Stadfeld, but he was unable to locate the thief.

By the final accounting of the will of the late C. W. Bush, formerly engaged in the retail jewelry business in Los Angeles, Cal., the Masonic Board of Relief will receive over \$35,000. The testator had intended to give the board a much larger sum, but the laws of the State prohibiting the bequeathing of more than one-third of the estate for charitable purposes prevented the will from being carried out to the letter. By order of the Probate Court, over \$50,000 will be distributed pro rata among the blood relatives of the deceased. When Mr. Bush died, June 8, 1905, his estate con-

sisted of \$100,000 worth of realty, \$50,000 in cash, and personal property.

Indianapolis.

Horace A. Comstock is again competing in the shooting tournament for the English Hotel Cup. He and Mrs. Comstock are spending the Summer in a camp north of Broad Ripple.

Chief of Police Metzger has promulgated rules designed to make it difficult for pawn shops to buy stolen jewelry. Special patrolmen have been assigned to see to it that the rules are enforced.

Those jewelry firms which are represented in the Merchants' Association are observing half-holidays once a week this Summer. Some of the stores close Friday afternoons and others Saturday afternoons.

Among the out-of-town jewelers who visited the local jobbers and manufacturers last week were: Sol. Pennington, Knightstown; J. A. Miessen, Cicero; D. S. Whittaker, Lebanon; J. A. Pickett, New Castle; H. Wheeler, Dana; J. F. Harding, Brownsburg, and Aaron Pursel, Noblesville.

W. A. Cole, janitor of the Warwick Flats, last week found a quantity of jewelry in a closet of the building. The jewelry included watch chains and cases of bracelets, rings and locket, all of which appeared to be new. The articles were turned over to the police, who are investigating.

Maurice Brower, an exporter of American pearls of New York, was here last week, on his way home from Southern Indiana, where he bought \$20,000 worth of pearls from local mussel diggers. This is the largest transaction in pearls in Indiana since the pearl industry was established. The finest pearl in Mr. Brower's collection was a large one, for which he had paid \$2,500. Mr. Brower said that he would soon take his Wabash river pearls abroad. He says that they have ready sales in foreign countries.

A prominent jewelry manufacturing firm of this city is accused by George Cousins, a negro burglar under arrest, with having bought all the jewelry stolen by the prisoner. Cousins terrorized the wealthy residence section of the city for several weeks. He entered two or three homes a night, and obtained jewelry valued in the aggregate at \$7,000. He was finally caught and lodged in jail. During the "sweating" he confessed to 40 robberies. He said that all his plunder had been bought by a certain jewelry concern. He explained that he would break the gold and silver articles into small pieces and then sell it. He declared that he had received not more than \$500 for all his plunder. The prisoner was taken before the members of the jewelry firm accused. He said they were the ones who paid him for his plunder. The firm made vigorous denial. The police are not inclined to believe the negro's story.

Hopkins & Witty, Dubuque, Ia., are about to begin the work of enlarging their store, at 864 Main St. The entire building has been leased by the firm, and will be remodeled.

*Distinctly
Impressive
Lines*

*For
Up-to-Date
Jewelers*

THE CREATIVE SKILL of the foremost designers of Jewelry abroad contributes to the artistic lines with which this establishment stands identified. The touch of Parisian genius and the glamour of the romantic Orient are manifest in these showings.

The trade is familiar with our popular lines of Bracelets, Combs, Necklaces, etc. Past achievements are exceeded this season. Special attention is called to the artistic use of the Garnet in our Bracelets and Necklaces. Showings in Jet and the most perfect artificial stones.

16 size, 10-year complete
watch, good mov'ts.. 3.55 each

These prices are net cash on arrival, or 10 days. I will not guarantee these prices to last 10 days longer; place your orders the minute you read this advertisement. If you want goods held and shipped later, pay 10 per cent. on your order as a guarantee, and I will hold goods for you 30 to 60 days. Should you send money in advance, and not like the goods on arrival, I will refund your money. I am handling this deal as a broker at a postage stamp price commission. Let me put you right, give me your orders on all such deals. Your dollar is your friend, why not save it with a man you can depend upon to cut the corners off expenses and give you the benefit? Try it once. Address the correct man for the correct price.

DAN I. MURRAY, Manufacturer, Importer and Broker,
3 MAIDEN LANE, NEW YORK.

IF you have any stones in the rough—except diamonds—to be cut, our new cutting works will enable us to fulfill your every wish. All work guaranteed. Best results attained. Try us.

UNITED STATES PATENTS.

ISSUE OF JULY 17, 1906

825,976. KNIFE. ANDERS E. NEIGLICK, Chicago. Filed Dec. 11, 1905. Serial No. 291,204.

A knife comprising a handle, a blade slidably mounted within said handle, a sliding shifter for

the blade within the handle having means at its inner end for detachably engaging the inner end of the blade and a spring-catch for releasably holding said shifter within the handle.

825,987. MATCH-BOX. AUGUSTUS F. THOMPSON, Huntington, W. Va. Filed April 6, 1906. Serial No. 310,384.

In a device of the class set forth, a casing open at one end and having a recess in one wall adjacent to its bottom, a match-holding casing telescoping therein and having a delivery-hole in its top and a longitudinal slot in its side wall near its bottom, and a combined locking and actuating

device consisting of a spring lying on the bottom of the casing and having one end formed into a spring-arm adapted to normally project the match-holder and its other end bent to lie against the wall of the casing and work in the slot in the match-holder wall, the upper end of this latter part being bent inward through the slot so as to engage the bottom of the match-holder, a part of said spring engaging in the aforesaid recess in the casing.

826,047. ARTIFICIAL EYE. EMILIUS MULLER, London, Eng. Filed July 23, 1904. Renewed Jan. 13, 1906. Serial No. 295,903.

In an artificial eye, a pupil therein conically

shaped and having an annular concave surface between the base of the pupil and the point of said pupil.

826,086. BRACELET. GEORGE H. CHANDLER,

Providence, R. I. Filed Feb. 7, 1906. Serial No. 299,930.

An expansible bracelet or the like comprising a

pair of members A and B, the latter telescoping into the former, a head C at one end of the member A, a head D at the opposite end of the member B, a spring M connecting said heads, and hinge members J and K upon the outer faces of said heads C and D.

826,232. COMBINED MATCH-BOX AND CIGAR-CUTTER. WILLIAM H. J. DOWNEY, Middletown, Del., assignor of one-half to John P. McIntyre, Middletown, Del. Filed April 2, 1906. Serial No. 309,541.

In combination with a match-box, a rectangular outlined casing having one end projecting beyond the longitudinal edges thereof and apertured, one edge of said casing adapted to be held against the

end of a match box, screws passing through registering apertures in said projecting end and the wall of the box, whereby said projecting portion may be held against the edge of the box, partition within the casing, a spring-pressed plunger mounted in registering apertures in said partition and one edge of the casing, an angled cutting-knife fixed to the end of said plunger and adapted to shear against the marginal outline of an aperture in the side of the casing, one end of said plunger extending through an aperture in the end of the casing, and a spring interposed between a shoulder upon said plunger and said partition.

826,236. EYEGLASS SPRING AND ATTACHMENT. WALTON D. FENIMORE, San Francisco, Cal. Filed Jan. 2, 1906. Serial No. 294,168.

In an eyeglass and in combination with the posts, boxes, and grips thereof, a horizontal bridge having its ends curved downwardly and inwardly whereby they lie substantially directly under the

horizontal portion, the extremities of said ends lying in a plane which is substantially at right angles with the plane of the lenses, and said extremities extending rearwardly beyond said curved portions and fitted to said boxes.

826,299. CIGAR-PERFORATOR. HENRY M. WILLIS, East Williston, N. Y. Filed Nov. 14, 1905. Serial No. 287,243.

A cigar-perforator comprising a flat plate forming a carrier-slide having longitudinal guides, and a flat plate forming a punch-slide having longitudinal slide-bars operating in said guides, said carrier-slide having a transversely-disposed nipple provided with a chamber for the reception and

support of the cigar-tip and oppositely-disposed apertures in the walls of said chamber, and said punch-slide having a punch extending parallel with said slide-bars and at an angle to said nipple and located so as to pass through said apertures, and each of said slides having means whereby they may be slid upon each other.

826,334. NAPKIN-PIN. STEPHEN O. HICKOK and RICHARD W. McLAIN, Allen, Mich. Filed Nov. 3, 1905. Serial No. 285,740.

A napkin-pin formed from a single length of

spring-wire which is bent intermediate of its ends into substantially U-shape, one side of the clip being pointed to form a pin, and the other side constituting a shank, the free end of which is bent into a loop forming a handle disposed in the same plane with the shank and the pin and located outwardly from the point of the pin, with its ex-

tremity lying between the pin and the shank, the extremity of the rebent portion of the shank being bent to form a rounded terminal disposed between the shank and the pin and spaced from these elements to provide an entrance-opening between the pin and the handle, and between the inner end of the handle and the shank.

826,444. STOP-WATCH. JOSEPH PETRILLO, Boston, Mass. Filed May 24, 1905. Serial No. 261,925.

In a stop-watch, an arbor for carrying an indicating-hand, a gear fast thereon, means to connect said gear with and disconnect it from the train of gearing driving the mean hands of the

watch, and means to set said arbor to zero position, said latter means comprising a swinging setting-arm, a pair of setting-fingers carried by said arm and pivoted thereto, and a projection rigid with the gear to be engaged by said fingers.

826,464. MATCH-BOX. MARCUS O. ANTHONY, New York. Filed June 2, 1905. Serial No. 263,432.

As a new article of manufacture, a box-blank having the parts forming the sides, front, back and bottom of the box integral, and having a

spring member attached to the part which is to form the bottom of the box, said member being independent of the part forming the back of the box.

ISSUE OF JULY 24, 1906

826,552. FOUNTAIN-PEN. CHARLES DUNN, New York. Filed July 3, 1905. Serial No. 268,033.

In a pen of the character described, a casing provided with an abutment at its rear end and integral

therewith and an opening therethrough, a pen-section located at the opposite end of said casing, a piston-holder cylindrical in form, an extension-

rod provided with an enlarged end and of greater length than said piston-holder, and provided with a threaded end which is adapted to engage with said piston-holder, an abutment located on the end of said extension-rod which serves to prevent the extension-rod from withdrawing from the piston-holder at its rear end, a stem removably attached to said piston-holder, a piston mounted thereon, and a disk connected to said stem to secure said piston in place.

826,503. ADHESIVE GUARD FOR EYE-GLASSES. EDGAR J. GEORGE, Chicago. Filed Aug. 26, 1905. Serial No. 275,894.

In eyeglasses, means for supporting the glasses

upon the nose having opposite contact-surfaces adapted to embrace the nose and composed of a substantially solid substance having adhesive properties.

826,628. PROCESS OF ENAMELING METAL AND THE RESULTING PRODUCT. SAMUEL H. THURSTON, Long Branch, N. J. Filed May 25, 1905. Serial No. 262,137.

The process substantially as herein described of enameling metal, which consists in first forcibly beating one metal into and upon the other system

matically and continuously until the particles, or molecules, or the coating metal are driven into the metal being coated and incorporated with the particles at and beneath the surface of the same, thereby forming an adherent and coherent permanent coating irremovably united with the metal being coated, and then forming a coating of enamel upon said coating.

826,635. STEREOSCOPE. RICHARD R. WHITING, Cincinnati, O. Filed March 23, 1905. Serial No. 251,588.

In a stereoscope, a hood, two partitions E located between the lenses and separated by a space for the reception of the nose of the user, said parti-

tions E extending from the plane of the lenses toward the face of the user, a back plate in one with the partitions E and the hood at the bottom provided with the recess D, aligning with the space between the partitions.

826,798. COFFEE POT. ALBERT PETERMAN, Dallas, Tex. Filed Jan. 23, 1901. Serial No. 190,360.

A pot comprising, in combination, a body having a pouring spout and a cover, a receptacle removably mounted in the upper part of the body below the cover, a hollow handle disposed externally of and parallel with the body of the pot and threaded at its lower end, an eduction-pipe communicating at its lower end with the body of the pot and enlarged at its upper end to form a valve-chamber, said valve-chamber having a shoulder and a threaded portion to engage the lower threaded end of the handle, a perforated guide-plate clamped against said shoulder by the handle, a valve controlling the passage in the eduction-pipe and provided with a stem shidable in said guide-plate, a

pipe extending laterally from the upper end of the handle and projecting through the wall of the pot below the cover and forming a combined induction connection and stay for the top of the handle, a valve-pump piston in the handle, a stem connected to said piston and extending outwardly through the upper end of the handle and provided with a handhold, whereby the tubular handle forms

a direct connection between the eduction and induction pipes and serves additionally as a pump-cylinder, the stem of the valve in the valve-chamber of the eduction-pipe being so arranged as to be engaged by the pump-piston at the limit of the downward movement of the latter to positively close said valve and prevent it from sticking.

826,719. TIMING MECHANISM FOR ENGINE-HOUSES. JAMES M. GARDINER, Hackensack, N. J., assignor to the Gamewell Fire Alarm Telegraph Co., New York. Filed Feb. 10, 1905. Serial No. 245,067.

The combination with a signal-circuit, and two independently-driven time-indicating movements,

one movement being controlled by the other, and means for disconnecting the movements, the said disconnecting means being controlled by the signal-circuit.

826,801. CIGAR-CUTTER. FREDERICK RATCLIFFE, Portland, Conn. Filed March 12, 1906. Serial No. 305,455.

A cigar-cutter comprising a pair of plates piv-

oted together near one edge, each plate having a cutting perforation and a finger that extends over the edge of the opposite plate.

826,854. PIN-TONGUE. THOMAS G. HUNT, Providence, R. I. Filed Feb. 19, 1906. Serial No. 301,763.

As an improved article of manufacture, a pin-

tongue having its rear or joint end portion bent

and terminating in lateral lugs integral therewith.

826,913. PEN-POINT GUARD. GEORGE E. WOODBURY, San Francisco, Cal. Filed Feb. 5, 1906. Serial No. 299,388.

A pen-point guard comprising a finger-piece pivotally attached to the holder behind the pen-point, a guard carried by said finger-piece adapted to set

over or in front of the pen-point, and a spring operating to set said guard in operative position when pressure is removed from the finger-piece.

826,933. COIN-CONTROLLED CLOCK AND SAVINGS-BANK. ANDREW J. HALL, Chicago. Filed Oct. 14, 1904. Serial No. 228,438.

In combination with a case having a key-aperture and a coin-aperture therein, coin-controlled apparatus arranged in said case and comprising, an arm pivotally mounted and adapted to be operated by a coin, a rod connected with one branch of said

arm and having a shutter at one end thereof, a catch arranged to engage the other end of said rod, a lifting-bar connected with said arm and adapted to be engaged and held by a key, a coin-chute leading from the coin-aperture to the free end of said arm, and means for restoring the pivoted arm to its normal position upon the removal of the key.

827,004. FOUNTAIN-PEN. BENJAMIN F. FLINT, Cincinnati, O., assignor to David B. Kaufmann, Cincinnati, O. Filed Oct. 28, 1905. Serial No. 284,858.

A fountain-pen comprising a tubular barrel open throughout its length and having a longitudinal slot pierced in its side intermediate its ends, a pen-section carried at one end of the barrel, a plug carried at the opposite end of the barrel, a tube

carried by said plug and extending into the barrel, an ink-sack carried by the pen-section and extending into the barrel and with its inner end extending within said tube, a presser-bar freely suspended within the barrel adjacent the ink-sack, a thumb-piece carried by the presser-bar and extending outward through said longitudinal slot and having a longitudinal notch, or slit, therein, adapted to be engaged by the inner end of the said tube and locking the presser-bar against actuating contact or engagement with the ink-sack.

827,010. WATCH-POCKET. LOUIS GREENWALD, Longview, Tex.; Saline Greenwald administratrix of said Louis Greenwald, deceased. Filed Nov. 20, 1905. Serial No. 288,242.

A watch-holder comprising a flap secured to a

garment and foldable thereagainst, a pocket on the

back of the flap, and means for securing the free end of the flap.

827,022. FOUNTAIN PEN. DAVID B. KAUFMANN, Cincinnati, O. Filed July 22, 1905. Serial No. 270,822.

A fountain-pen comprising a hollow barrel having a minute reservoir-opening in its side for the passage of a pin or the like, a compressible, tubular ink-reservoir removably inserted within the barrel, a press-plate unattached to said ink-reservoir and extended lengthwise in the barrel with an intermediate part in line with the said minute opening

therein and adapted to be engaged by a pin inserted thereat and a strip of elastic metal one end of which has attached connection with the press-plate and the opposite end of which has attached connection with the barrel, said strip being between the barrel and press-plate and being provided with a central opening registering with that in the barrel and being adapted to hold the press-plate normally retracted in close proximity to the wall of the barrel.

DESIGNS.

38,120. BADGE. FRANK B. BOWER, Philadelphia, Pa., assignor to Phi Kappa Sigma Fraternity, Philadelphia, Pa. Filed March 15, 1906. Serial No. 306,302. Term of patent 14 years.

nity, Philadelphia, Pa. Filed March 15, 1906. Serial No. 306,302. Term of patent 14 years.

PRINTS.

1,734.—Title: "IT WINDS ITSELF." (For a self-winding clock.) NATIONAL SELF-WINDING CLOCK CO., Champaign, Ill. Filed May 7, 1906.

1,735, 1,736 and 1,737.—Title: "IT WINDS ITSELF." (For a self-winding clock.) NATIONAL SELF-WINDING CLOCK CO., Champaign, Ill. Filed June 4, 1906.

UNITED STATES PATENTS THAT HAVE EXPIRED.

[Reported especially for THE JEWELERS' CIRCULAR-WEEKLY by R. W. Bishop, Patent Attorney, Washington, D. C.]

Issued July 23, 1889.

407,375. FERRULE FOR UMBRELLAS AND CANES. C. S. SMITH, Philadelphia, Pa.

407,401. BELT. JACOB HIRSHFELD, New York, assignor of one-half to A. G. Spalding & Bros., same place and Chicago.

407,412. FOUNTAIN-PEN. JOSEPH MORRIS, London, England.

tang *b* of the blade is made to extend through the handle, an enlargement *c* at the end fitting

into a hole *d* in the handle *a*, which is made hollow in two parts. The tang is soldered to the handle at the bolster and the enlarged part at the end.

5,299. LOCKETS, ETC. H. T. DUMELOW, Hockley, Birmingham. March 14.

A locket or the like is formed of an outer metal shell *a* and a slide *b* containing photographs, miniatures, etc., and having a flange *f* and at-

FIG. 3. FIG. 4. FIG. 5. FIG. 6.

tachment ring *c*. Spring-like or other pegs *d* may engage grooves *c*, and the shell and slide may be elastic, to prevent accidental opening.

5,310. WATCHES. F. HARTMANN and J. OLIAK, both of Prague, Austria. March 14.

Going-Train.—A watch is made which requires winding-up only once a week, but in which the length of the mainspring is still normal. The

ratios of the wheels and pinions give four hours for the revolution of the center-wheel *G* and a quarter of an hour for the revolution of the third wheel *Z*. The center-arbor extends through the hollow arbor of the center-wheel and carries at the back a second center-wheel *M*² in gear with a wheel *M*¹ of one-fourth the size on the third arbor.

Motionwork.—Instead of having a cannon pinion, the center-arbor and second center-wheel *M*² are connected by a friction clutch *P*.

5,647. CLOCKS. J. A. T. ANDERSON, London. March 17.

Going-Train. *Framework.*—A portable clock, Fig. 2, of small dimensions, but adapted to go for

OPTICAL DEPARTMENT

The Optometrist's Catechism.

A SERIES OF QUESTIONS AND ANSWERS ON ELEMENTARY OPTICS, IN CATECHETICAL FORM.

By E. Le Roy Ryer.

Copyright, 1903, by THE JEWELERS' CIRCULAR PUBLISHING CO.

(Continued from issue of July 25.)

Q.—(660) What are the salient features of the old "refracting-angle" system?

A.—Numbering prisms by the angular deviation of their refracting surfaces was the method first used, but, like the old or inch system of numbering lenses, it is a faulty, unscientific method. Such a method gives only an idea of the construction and shape of the prism, but does not give a true idea of how powerful a prism is from a refracting standpoint. That is, two prisms may be made, one of crown glass and the other of diamond, but each with the same angular deviation or, in other words, each

Fig. 87.

having exactly the same shape, and yet while the old method would assume them to be similar, the one made of diamond would have nearly double the refracting power of the other. Thus C R N, Fig. 87, represents a prism made of crown glass with refractive index of 1.50, while D I A, Fig. 88, represents a prism made of diamond with a refractive index of 2.70. The triangles, C R N and D I A, are equal because C R D I being radii of the same sized circles, R N is made equal to I A, and are perpendicular respectively to C R and D I; angles C R N and D I A are therefore right angles and equal, and it is true of triangles that if they have two sides and one angle equal they will be equal in all respects. In our case, therefore, the angles, R C N, Fig. 87, and I D A, Fig. 88, are equal, and as the angles represent the angular deviation of the surfaces of the prisms, the old method would designate these two prisms equal. But in Fig. 87 a ray of light, W V, is refracted by the crown glass prism, C R N, from the direction L toward U, while in Fig. 88 the diamond prism, D I A, would

refract a similar ray, X Y, from the direction J toward Z, and Z is one and four-fifths as far from J, Fig. 88, as U is from L, in Fig. 87; therefore, the prism D I A, Fig. 88, is in reality one and four-fifths as powerful as the same sized prism, C R N,

Fig. 88.

Fig. 87, yet their refracting angles are equal, and should, according to the old system, be equal in other respects. From this one instance all must conclude that such a method as that of numbering by the angular deviation gives no true idea of a prism's refractive value, and it is this value and not the shape of the prism or the deviation of its surfaces that concerns the optometrist.

Q.—(661) What is Dennett's method of numbering prisms?

A.—Dennett proposed calling the unit of measurement a centrad. A centrad represents a prism that will deviate a ray of light the 100th part of the arc of the radian. The measurements are made as follows: In Fig. 89, R A represents the arc of the radian. This arc is equal to as much of the circumference of the circle as will equal the length of the radius of curvature. In this case, N A equals the radius of curvature and R A equals 57.295 degrees. This arc of the radian, R A, is then divided into 100 equal parts. A prism, base down, at the center of curvature that will deviate a ray of light downward just a 100th part of this arc of the radian is called a centrad and equals 1/100th of 57.295 degrees, or .57295 of a degree. In Fig. 89, C E N represents a 10-centrad prism and bends the ray downward one-tenth of the arc of the radian, or from D to A, a one centrad would bend it only one-tenth as much, but

on a small diagram this could barely be noticed.

Q.—(662). What is Prentice's method of measuring and numbering prisms?

A.—During the last few years much more attention has been given muscular anomalies than they ever before received. The fact must also stand out conspicuously to the thoughtful observer that as time goes on more and more study will be given these conditions; and with the study of muscular insufficiencies is naturally associated the study of prisms. As it became evident that a standard lens was needed, so is it evident that a standard prism is needed; the lens unit (the dioptre) was suggested and accepted, and the same reasoning that proved the advisability of adopting the dioptre applies equally to the necessity of adopting

Fig. 89.

a standard unit for prism measurement. No one foresaw the demands of the future with greater clearness than Charles F. Prentice, who proposed as the standard unit the prism-dioptre. This method immediately met with approval from all sources. It is well for the American optometrist to know that both the Bausch & Lomb Optical Co. and the American Optical Co. made elaborate practical tests of the method, and, finding it so pre-eminently advantageous, discarded the old degree system entirely and now manufacture all prisms on the basis of the prism-dioptre. Dr. Swan M. Burnett said: "The old method of numbering prisms simply by the angular deviation of their sides is confessedly inaccurate and unscientific. Any attempt to supplant this by one more accurate and to place the nomenclature of prisms on the same basis of scientific exactness as the other optical appliances in the hands of the practical ophthalmologist is, therefore, deserving of consideration. The method proposed by Mr. Prentice not only does this, but does it in a manner and according to principles

Optical Department.

which are familiar to even the less scientific practitioners. To have the same unit (the meter) of measure and comparison for all refracting apparatus, and uniform with the nomenclature employed in the designation of anomalies of refraction and muscular equilibrium, gives a simplicity which is not only commendable in itself, but tends to render the study of the practical use of prisms easier and more comprehensive to

method of numbering prisms. We are, furthermore, in a position to state positively that heretofore this subject has not been given the attention it deserves; although the prism is one of the simplest and most fundamental elements in dioptries, its very simplest feature is not generally understood. Many indulge in high-sounding arguments concerning the prism's value in cases of heterophoria, and yet, if asked, could not tell to what extent a 1 Δ prism would affect a ray of light.

A prism-dioptry is a prism that will de-

first one, Z, being one centimeter from the principal axis or center of the lens. This ray Z, being one centimeter from the optical center B, is deflected from Z' to F, just one centimeter in the focal plane P F; the second ray, Y, is two centimeters from the center, B, and is deflected two centimeters, or from Y' to F in the focal plane P F; and the third ray X, being three centimeters from the center B, is deflected three centimeters in the focal plane, or from X' to F.

Thus a lens decentered one centimeter will produce as many prism-dioptries as the lens has dioptries of refraction. For instance, a lens of 1 dioptre decentered 1 centimeter will produce a 1 prism-dioptry; a lens of 2.D. decentered 1 C.M. will produce 2 Δ ; and a lens of 5.D. decentered 1 C.M. will afford 5 Δ , etc. The prism-dioptric power is also in direct proportion to the amount of decentration—that is, a lens of 2.D. decentered $\frac{1}{2}$ C.M. gives 1 Δ ; or if the same 2.D. lens were decentered 2 C.M. it would produce 4 Δ , etc.

Q.—(664) What law governs the relation between the prism-dioptry and lens-dioptry?

A.—Any lens is capable of producing as many prism-dioptries as the lens possesses dioptries of refraction, provided the lens is decentered one centimeter.

If we remember the centimeter in connection with the prism-dioptry, as we do the meter in its relation to the lens-dioptry, no trouble will be encountered in making these calculations.

The author suggests the following rule: To obtain the prism-dioptric value of a decentered lens, multiply the lens-dioptries by

Fig. 90.

the student. This is particularly apparent in the connection the author establishes between the prism-dioptry, the lens-dioptry and the meter-angle."

When optometrists recollect how high feeling ran between themselves and medical men a few years ago, they will realize that this method must have had exceptional merit to elicit such remarks from the medical press as the above, and the following, printed in *Medical News*: "To Mr. Prentice alone belongs the credit of having proposed as a standard prism one which produces a deflection of one centimeter at one meter's distance, and no advocate of the centrad ever hinted at it until the appearance of his paper in the 'Archives of Ophthalmology.' We owe the simplicity of that idea to Mr. Prentice; let us not deprive him of whatever honor belongs to the conception."

Prentice first advocated a metric system of numbering and measuring prisms in 1890. It was he also who first suggested that the figure of a prism Δ , used as an exponent to the prism numerals, should be the symbolic sign for the prism-dioptry, it also being the letter D of the old Greek alphabet. By this means, one prism-dioptry (1 Δ) is readily distinguished from the prism of one degree (1°) refracting angle, and from prisms based upon any other system of numeration. Some advocates of the centrad claimed the right to use the symbol Δ as the sign for designating a centrad, but the figure of a triangle, no matter how placed in respect to the position of its sides, refers exclusively to the prism-dioptry, being so recognized by American manufacturers.

We have prefaced our description of the prism-dioptry with the above remarks with the hope of arousing our readers to a keener appreciation of the importance of gaining a full understanding of the prism-dioptry

deflect a ray of light one centimeter at one meter's distance. For instance, in Fig. 90 are shown two prisms. A B C is the unit or prism-dioptry, deflecting the ray W V one centimeter, from X to Y at a distance of one meter; D E F, same figure, represents a 2 Δ (two prism-dioptry) deflecting

Fig. 91.

the ray W V twice as much—that is, two centimeters at one meter's distance, or from X to Z.

Q.—(663) Does the prism-dioptry bear any relation to the lens-dioptry?

A.—Yes; every lens, no matter what its dioptric power, contains all possible values of the prism-dioptry, it being only the size of the lens which in practice will set a limit to its prismatic power. The prism-dioptry constitutes a distinct part of every lens of the dioptric system. As Prentice claims, the prism-dioptry stands unchallenged in its unique ability to harmonize all of the refracting elements in the optometrical lens-case by establishing a complete and inseparable relation between lenses and prisms. Thus in Fig. 91, A B C represents a vertical section of a 1 dioptre plano-convex lens; X Y Z are rays incident upon its plane surface, and are one centimeter apart, the

the number of centimeters of decentration.

The practical value of these principles cannot be too fully appreciated by the optometrist. Muscular work is destined to play a very important role in his work, and the basis of muscular correction is often prisms, and a prismatic effect can often be obtained with little extra cost by decentration that would cost heavily if the effect were to be obtained by incorporating a prism in the combination. For example, suppose the case called for +4.00 D.S. \ominus 2.00 D.C. 180 = 2 Δ base in; to grind this in the form of a spherocylinder-prism would be an expensive method; the same result could be obtained by decentering the spherocylinder $\frac{1}{2}$ centimeter (or 5 millimeters, or, roughly, $\frac{1}{8}$ of an inch) and thus getting a prismatic effect equal to 2 Δ without actually using a prism.

Optical Department.

Anatomy of the Nervous System.

(Lecture recently delivered before the Rochester Optical Society by DR. RALPH H. WILLIAMS.)

(Continued from issue of July 18.)

WE have now arrived where we can deal with the functions of the various portions of the nervous system. Beginning with the cerebrum, we find it to be the center for all physical and mental process involving volition and consciousness. Volition is the starting point in direct motor activity, while consciousness is the final phase of sensory impressions. While, as has been shown in the matter of the reflexes the spinal cord is capable of carrying on elaborate and well co-ordinated reflex actions, yet it is incapable of initiating any motor impulses or of registering any sensory impulses.

As has also been shown, each hemisphere of the cerebrum is concerned only with the motion and sensation of the opposite side of the body, and the cerebrum has been studied until it is possible to accurately localize the areas controlling the different functions of the different localities. The cortex of the brain is the final and highest nervous element. While the optic thalamus and the corpora striata, the basic ganglia with which we have dealt, are important, they are yet secondary to the cortical tissue. This is proven by the fact that when a hemorrhage takes place which affects only the optic thalamus, unless it be of considerable extent no notice will be taken of it, whereas even the slightest hemorrhage in the cortical substance will cause a paralysis of some function, be it ever so slight.

We will not go into the details of the areas of the brain further than to mention the local of what is known as the visual area. This is located in the occipital lobes, which you will remember lie behind the ear and above a line drawn from the upper margin of the ear to the external occipital protuberance.

This localization has been carried to such a point, however, that it is now entirely possible to surgically remove causes of interference with the function of certain areas. The function of the cerebellum is that of co-ordination. It is the great center of co-ordination of the muscles of the body. It is not the only co-ordinating center, for, as has been shown, the entire cord has that function to a considerable degree, but the great and broad co-ordinating operations are conducted by the cerebellum. For instance, suppose you wish to look at some object squarely at your right. That impulse being originated by the higher cortical center, the lower centers take it up and distribute the necessary impulses to the muscles of the eye and to the muscles of the neck, and even to the back. It is this extensive co-ordination which is controlled by the cerebellum.

In order that it can properly perform this function, it must receive impressions. These impressions are of four kinds, and, as have been shown, reach it through the columns of Clark and the direct and crossed pyramidal tracts of the cord as well as by communicating fibres from other portions

of the brain. These impressions are tactile, muscular, visual and labyrinthine.

The first tactile is, as you all know, the impression carried from the nerves in the skin. The muscular sense is that sense which tells you the location and condition of a portion of the body without looking at it. Visual impression speaks for itself, and labyrinthine impressions are those which are carried to the brain from the semi-circular canals of the ear, and which show the position of the body in its relation to the perpendicular. All of these sensations enter actively into the performance of the function of co-ordination.

It would be impossible in the time at my command to deal with the physiology of all of the special senses. Many of them you are familiar with in a general way, and the physiology of the sense of sight is one of which you know more than I. I will therefore confine myself to a general discussion of the more prominent nerves of the body, and especially those most nearly related to your work.

Before taking up this subject I wish to again speak of certain efferent nerves which carry trophic impulses. As yet little is known regarding the nature of the end organ of this class of nerves, but it is located in the tissues themselves, and through it the nutrition, the building up and tearing down process which is always going on, is controlled.

In some portions of the body the direct source of these trophic nerves is only a matter of speculation, while in others it is definitely known. It is especially appreciated in the fifth nerve, the pneumogastric and, in a general way, the sympathetic. The cessation of operation of the trophic nerves results in a diminution of their usual constituents, but, on the other hand, there is an increase in the amount of fat.

In dealing with the anatomy of the cranial and spinal nerve I gave you more or less of their physiology in describing their function. This was only superficial, however, and there are a few points of special interest in connection with some of these nerves which I will deal with now. These are points which have more or less of a bearing upon pathological conditions.

The first cranial nerve or olfactory is of comparatively little importance for our purposes, so we will pass it by. While it seems superfluous for me to discuss the optic nerve before this society, I will risk the possibility of repeating something you already know, and discuss a few of the finer points of the physiology of this nerve.

It is connected centrally both with the psycho-visual center and with the pupil contracting center, and of course the reflex association of these two centers is close. It is possible for paralysis, or even degeneration, to take place of either one of these tracts of nerve independently, resulting in absolute blindness in the case of the fibres to the visual center and with dilatation of the pupil when the pupillary fibres are affected.

Perhaps no portion of the body is affected so much by what is known as reflex affection as is the eye, unless it be the stomach. The study of this reflex is a broad subject, and has brought comparatively little of definite knowledge as to the direct source

of the reflex effect, or rather its path. It is generally believed to be due to the effect upon the general vaso motor system, and on account of the delicacy of these structures in the eye that that organ is affected before an alteration in the blood pressure would affect other organs.

The two organs in the body in which pathological conditions are most often reflected in the eye are the liver and the female pelvic organs. Diseases of the liver frequently cause affections of the eye which are usually transitory or intermittent in character, but which are nevertheless very distressing. The so-called liver spots before the eyes are a common example of this condition. This is usually due to an increase in the blood pressure in the liver in even a slight congestion. Diseased conditions of the ovaries have often been the sole cause of quite serious conditions in the eyes, and a persistent irritation of the ovaries has been known to set up destructive diseases in the eyeball as a result of the persistent reflex irritation. This is a subject so broad and deep that it has received special consideration in monographs devoted to that subject alone.

A case recently under my observation suffering for a number of years from general neurasthenia of a pronounced character was unable to be fitted with glasses so that the eyes could be used with any degree of comfort. Glasses which would answer the purpose to-day would be far from correct a week from now. This condition persisted until the muscles of the eye became so weakened that there was little left to work with, and a course of muscular education was commenced. I had been aware for some time of the presence of serious conditions in the pelvis, but had endeavored to do what was possible to relieve them without resorting to the knife, a thing which the patient dreaded very much.

Finally conditions arrived at a state in spite of what could be done that it was necessary to go further. Investigation proved the presence of tumors in the cervix and walls of the uterus which were showing a tendency to break down with a possibility of becoming cancerous. An operation was resorted to immediately, resulting in the finding of one tumor in the cervix already broken down to the consistency of a cheesy mass, and another in the cavity of the uterus in even a more advanced state of degeneration. Two undegenerated tumors were found in the wall of the uterus, one in the right broad ligament, and the right ovary contained a cyst. All of these tumors were about the size of an English walnut. It was, of course, necessary to remove all but the left ovary.

The time is as yet too short to express a definite opinion as to what the state of the eyes will be in this case. The nervous system must be reorganized, but the progress is good, and everything points to a practically complete recovery in time. The eyes are already acting better, and I believe that in the course of a couple of years the patient can be fitted with glasses which will afford relief. Three years ago I expressed the belief that we would eventually find that the cause of that disturbance was pelvic, and my prediction seems to be in a fair way to be proven.

(To be continued.)

AMERICAN OPTICIANS IN CONVENTION

Report of the Opening of the Eighth Annual Meeting of the American Association of Opticians, at Rochester, N. Y.

ROCHESTER, N. Y., July 31.—The eighth annual convention of the American Association of Opticians, which opened yesterday, gives promise of being one of the most enthusiastic and largely attended meetings ever held by the association. Over 800 eye specialists from all parts of the country are present, and many have brought their wives. The visitors have been arriving since last Wednesday, and still more are expected. Delegates were welcomed at Haines Hall, where the meetings and exhibits are being held.

Yesterday morning was devoted to the convention of the Optical Society of the State of New York. Delegates for this convention registered from 10 o'clock to 11 o'clock in the morning. At 11 o'clock President W. W. Bissell of the State Society called the meeting to order. The minutes of the last meeting were read by Roger F. Williams, secretary, and approved by the delegates. Thanks were extended to Mr. Williams for his faithful work.

F. E. Robbins, Elmira, treasurer, read a report on the financial standing of the society. The report stated that the Optical Society of the State of New York had made a very substantial growth in the last year. "Considering the amount of work accomplished," said Mr. Robbins, "the society is in better financial condition than ever before. There have been more dues paid in advance than ever before in the history of the society. The society is one of the institutions of the State, and the future looks most promising."

The report of the Executive Committee was next read by H. C. Watts, chairman. The report briefly stated what had been accomplished during the past year and what work still remained to be done.

E. E. Arrington, chairman of the Legislative Committee, reported on the work that had been done at Albany during the past year. He spoke of the failure to pass the "Optometry Bill" and the reasons for the failure; further, he stated what must be done by the members of the society to secure their rights. Mr. Arrington said that his paper on "Legislation," which he will read Wednesday, will more fully cover the subject.

Following the report of the Legislative Committee, President W. W. Bissell delivered his annual address, which will appear in a forthcoming issue of THE JEWELERS' CIRCULAR—WEEKLY.

At the close of President Bissell's address some time was devoted to a discussion of plans and ideas for the future. Delegates then took a recess until 2 o'clock in the afternoon, when unfinished business was taken up and later legislation discussed and considered in every possible light. Throughout, the meeting was lively and enthusiastic. Before closing the session officers and directors for the ensuing year were chosen. The

rest of the afternoon was given to inspecting the exhibits.

At 8 o'clock in the evening Haines Hall was filled to the limit with delegates to the National Association convention. The exhibits were in the same hall, as the space in the meeting room was somewhat at a premium. The session was opened by an address of welcome by the Hon. James G. Cutler, Mayor of Rochester. The Mayor, in a few words, expressed his pleasure at being able to welcome so many opticians to Rochester, and spoke of what the optical industry has accomplished for that city. He also expressed his satisfaction over the general advance of optometry and of the good work which the optometrists have and are trying to accomplish. John C. Eberhardt, Dayton, O., responded to the Mayor's address.

B. B. Clark, president of the National

B. B. CLARK.
President American Association of Opticians.

Association, next delivered the annual address, which follows:

PRESIDENT B. B. CLARK'S ADDRESS.

I do not think it necessary to retrospect at this time, as you nearly all are familiar with what has been done and left undone during the past nine years of our organization. I think it must be conceded that these annual gatherings have done much for all of us in many ways. When members from all parts of the United States and Canada and representatives from foreign countries, interested in the same line of work, meet, as we have met, and exchange ideas and express their ideals, it does not need a philosopher to realize the mutual benefit derived.

I notice once in a while—usually in the

optical journals—the question is asked by some one who does not sign his name to the inquiry—what good local and state societies are? "What is the American Association and what are the benefits of affiliation?"

These questions I can answer and there are almost any number here in this room who can give you more reasons than you ever thought of. Many times it costs a lot of money to know many people who are not worth knowing, and the best plans are perfected only after many failures. There is one question I would like to ask of such inquirers. If you are not getting anything out of this association, why are you putting into it?

There are many men you can lead to college, but you cannot make them think. Criticism is helpful many times, but it should be accompanied by suggestion. I have attempted to be as brief as possible and wish only to call your attention to several matters, which, in my opinion, should be given some thought and discussed at this meeting.

The most important matter from all points of view is the regulation of the practice of optometry. It is equally important to the optometrist, jobber, physician and public. Legislation will require a higher standard of qualification, which means education within and without, and such education will have a great tendency to reduce the commercial value of humbug.

While this matter will have to be accomplished by the individual States, I believe that this organization should assist in every way possible. I have the past year appointed a committee on legislation, and I would suggest that all State associations introducing optometry legislation should correspond with that committee, as I believe it can assist them to a great extent. I also believe that by so doing, uniform optometry laws may be placed upon the statute books of the different States. During the past year a "Legal Defense Committee" has been appointed to which I desire to call your attention.

Article II. of the constitution and by-laws of the American Association provides in part, that the purposes of this association shall be: "Safeguarding the material interests of the profession; elevating the standard of optical education; securing the enactment and enforcement of optical legislation and enlightening and directing public opinion in regard to the problem of optometrical science." It is our belief that safeguarding the interests and enlightening and directing public opinion may well be observed in offering direct and indirect aid to legitimate members of our profession who are being persecuted and prosecuted in many states through petty spite and jealousy of incompetents who presume upon a suffix to pose as experts in optometry.

After consultation with our Board of Directors I have appointed a legal defense committee to assist any member of this association, or any member of any society in affiliation, who has been subjected to prosecution while engaged in the legitimate practice of optometry. Those in need of help should communicate with our secre-

Optical Department.

tary, who will put them in touch with the legal defense committee. All members applying for such aid must have the endorsement of their State society.

The States of Vermont and Connecticut have enacted laws compelling an examination of school children's eyes at frequent periods, and it is an example which other states may well follow. Dr. Geo. Woodruff, in a recent article published in the *North American Review*, says: "Headache, whether it is due to anemia, eye strain, bad ventilation, fatigue, nerve exhaustion, or what not, is, in its origin, distribution and characteristics, the most typical, perhaps, of all school diseases." Grouping information obtained from France, Germany, Great Britain, Sweden, Denmark and Russia, it is apparent that from 40 to 50 per cent. of the school children suffer from this malady; and, further, that it is commonly habitual, usually frontal in location, and that girls are more affected than boys. Moreover, it was noticed that the number of scholars suffering from habitual headache increased (at a maximum rate of six per cent. a year), step by step, and grade by grade, with advancement through school.

How many school children in the United States suffer from or succumb to diseases of the nervous system induced or made worse by school life, and what proportion of such affections encountered in adults originate at this early period, it is impossible to say. We know that, wherever careful and comprehensive investigations have been undertaken among school girls and boys, disorders of the system have been found to be numerous and of a character actually or potentially grave. In one year more than 10 per cent., and in another nearly 20 per cent. of the public school children, examined by health officers in Boston, were thus sent home. In Cleveland, 25 per cent. of the girls and 33 per cent. of the boys, who left the high school during a single year, did so because unable to keep up with their studies by reason of ill health. One writer asserts that, in five cities of the United States, 16,000 children between eight and 14 years of age were taken out of the public schools within one school term, because of ill health.

We know that a large portion of this headache and nervous derangement is caused by eye strain, as we have authentic statistics showing that the percentage of school children having imperfect vision, is enormous. While the duty devolves upon the parent, it is a well known fact that few parents take the trouble to ascertain whether a child's eyes are in a condition to do the work required. In all localities it is possible to call the attention of the Boards of Education to the desirability of ascertaining the condition of the eyes of the school children and suggesting a simple test which can be readily made by the teachers and enable them to at least get the manifest vision.

At our meeting in Minneapolis, last year, several amendments to our by laws were adopted, and the past year, I think, has proved the wisdom of such changes. In

those amendments, however, no provision was made regarding the representative rights of affiliated State societies, and I would suggest such an amendment be adopted at this meeting. Otherwise, I am convinced that the scheme of affiliation should not be changed.

During the past year the officers of our association have endeavored to formulate and carry out plans that would prove beneficial. The Physiological Section has been given the entire responsibility of securing speakers to address this meeting, and it is entitled to considerable credit for the able manner in which it has performed this part of the programme.

It was decided by the Board of Directors, in order to stimulate a maximum interest among exhibitors, to offer them space at this convention free of charge.

SAMUEL S. GRANT.
President of the Physiological Section.

and the association has not asked for any advertising in a programme nor accepted a donation of any kind. Whether this departure is the wisest course you may judge for yourselves.

Our membership in 1898 was 181. Today it is over 1,500, which is certainly a healthy growth, and should insure an income sufficient for all necessary expenses. I trust this meeting will be pleasant and a profitable one to you, and that our city may have the pleasure of a visit from you many times in the future.

Following President Clark's address, William E. Huston, Kansas City, Mo., secretary of the association, read his report, which was heard with approval by the delegates. The report of the treasurer, J. K. Stebbins, Ashtabula, O., showed that the association was in good financial condition and that the outlook was all that could be asked for. The meeting was then adjourned until this morning.

The first thing on to-day's programme was a visit to the factory of E. Kirstein's Sons Co., on Court St. A large crowd left

the convention hall about 8.30 o'clock and spent over an hour inspecting the different departments.

At 9.30 the opticians again went into regular session. The first part of the session was devoted to business matters. This is to be followed by addresses by the following: Dr. Arthur G. Campbell, Topeka, Kans., "Health Ray Lenses"; E. LeRoy Ryer, New York, "The American Optometrical Academy"; R. M. Lockwood, New York, "The Eye as an Imperfect Optical Instrument"; E. C. Bernheim, Providence, R. I., "Errors in the Business of the Optician"; Ernest Eimer, Muskegon, Mich., "The Physiological Section, Past and Future." These addresses will be listened to with much interest by those present.

At 1 o'clock in the afternoon the opticians will leave the convention hall for a visit to the Bausch & Lomb Optical Co.'s factory. Owing to the immense size of this plant, arrangements have been made to spend the whole afternoon there. The visitors are to be welcomed by officers of the firm, and all departments thrown open for their inspection. After spending an afternoon at the factory, recently, some opticians were heard to say, "I'd like to spend a couple of days in that plant." For those who do not care to visit this establishment friends of the local opticians have provided automobiles, and the visitors will be given a ride about the city and shown the points of interest.

In the evening there will be an eye-testing clinic, conducted by the Physiological Section. Prof. Samuel S. Grant, president of the Section, is demonstrator. There is also a muscle-testing clinic in charge of Librarian of Section C. M. Jenkins, with Dr. John H. Ellis and John C. Eberhardt acting as demonstrators. Both clinics are expected to be largely attended.

A feature of the convention are the exhibits of the different manufacturers. On each side of the front part of the hall the larger booths are erected. The smaller booths are in the center of the hall, back to back. On the left side are: The Eye-Fix Remedy Co., Detroit, Mich., F. H. Eastman in charge; Chas. Fried, New York; Taylor Bros., Rochester, Chas. Taylor in charge; W. & S. Blackinton Co., North Attleboro, Mass., Geo. G. Wheeler and F. H. Carpenter in charge; Warner & Swasey, Cleveland, O., Miss M. E. Cramer in charge; Geneva Optical Co., Geneva and Chicago.

On the right are: The Globe Optical Co., Boston, Mass., with R. E. Thompson, F. M. Drisko, W. W. Slade, Geo. B. Nagel, A. G. Barber and F. A. Barber in charge; Boston Optical Co., Boston, Mass.; Pinkham & Smith, Boston, Mass., William F. Pinkham and Walter G. Wolfe in charge; Winchester Optical Co., Horseheads, N. Y., H. C. Jenung and W. L. Slavin in charge (Edward Clarke, Dunkirk, N. Y., also exhibited in this booth); D. V. Brown, Philadelphia, Pa., B. A. Marsden and W. H. Podesta in charge.

In the center and small rooms leading off the hall proper the following exhibited: Rochester Spectacle Co.; E. Klein & Bros., Cincinnati, O.; Standard Optical Co., Geneva, N. Y., H. B. Graves, C. W. Holland and C. E. Quimby in charge, also two demonstrators; Fox Optical Co., Philadelphia, Pa.; R. F. Simmons Co., Attleboro,

Mass.; McIntire, Magee & Brown, Philadelphia, Pa.; Fred Gongelman, New York; B. Mayer, Baltimore, Md.; Hub Optical Case Co., East Dedham, Mass.; Pollack & Michaels, New York; C. P. Goerz, New York; E. Howard Watch Co., Waltham, Mass.; Jos. Fahys & Co., New York; South Bend Watch Co., South Bend, Ind.; Southbridge Spectacle Mfg. Co., Southbridge, Mass., and L. E. Waterman Co., New York.

The booths are prettily decorated, and all made a good showing. Many of the exhibitors had their booths all in shape on last Saturday, but there were several who still had work to do on them yesterday and to-day.

One of the prettiest booths is that of E. Kirstein's Sons Co. This is located in a small room off the rear end of the hall. It was attractively decorated with palms and cut flowers, and on the opening day punch was served by young ladies dressed in white. The booth is in charge of the traveling representatives of the firm, William L. Waldert, A. J. Fairbairn, Benj. Hillsbury, Grant Whittlesey, D. H. Lammerets and Frank Waugh. Off of this booth the Physiological Section has a place fixed up as a testing room. All the latest and most improved instruments and appliances are used here and explained.

The Rochester Optical Society also has a booth. Mr. Someriski, secretary of the society, is in charge of this booth, where information regarding streets, hotels, car lines, etc., may be had. A telephone has also been installed in this booth for the convenience of the visitors.

For to-morrow the programme is as follows:

8:30 TO 9:30 A. M.

Business session of Physiological Section.

9:30 A. M.

Unfinished business.

Address, John C. Eberhardt, Dayton, O., "Monocular Amblyopia Due to Congenital Corneal Asymmetry;" address, Geo. W. McPatrick, M.D., Chicago, "Correction for Myopes;" address, Edward E. Arrington, "Legislation;" address, H. P. Holmes, Des Moines, Ia., "Accommodation;" address, Samuel S. Grant, Montreal, "The Eye in Comparative Anatomy."

1 P. M. SHARP.

Meeting of members and visitors at Convention Hall to start for Eastman Kodak Works, Kodak Park.

At the conclusion of visit to Kodak Park, a beautiful trip has been arranged as follows: Trolley cars leave Kodak Park for Ontario Beach; from Ontario Beach take steamers over Lake Ontario to Sea Breeze; from Sea Breeze take steamers over the famed Irondequoit Bay to Glen Haven; from Glen Haven take trolley cars to Rochester.

The official photograph will be taken at Kodak Park by the Century Camera Co.

EVENING, 8 P. M.

Address, G. M. Jenkins, Richmond, Ind., "Some Diseases Essential for the Optometrist to Recognize;" address, Chalmers Prentice, M.D., Chicago, "The Soul and Its Immortality Proven by Science;" address, Earl J. Brown, M.D., Chicago, "Mechanism of Accommodation," illustrated by stereopticon; address, H. L. DeZeng, Philadelphia, "The Illumination of the Eye by Direct and Oblique Methods;" address, E. Culverhouse, Toronto, Canada, B. O. A., "Things in General."

The Dothan Jewelry Co.'s establishment, Dothan, Ala., was broken into recently and several hundred dollars' worth of jewelry was stolen. Among the loot are several watches which had been left to be repaired. A negro named Oscar McGlendon, who was subsequently arrested accused of the crime, but who afterwards escaped, surrendered part of the plunder.

Connecticut

Tracy Bergen has left on an extended western trip in the interest of the J. D. Bergen Co., Meriden.

Walter Hubbard, F. P. Wilcox and B. W. Collins were re-elected directors of the Meriden Cutlery Co., Friday.

Clifford W. Leavenworth, treasurer of R. Wallace & Sons Mfg. Co., Wallingford, is confined to his home on Academy St. by illness.

Oscar Anderson, formerly with the Seth Thomas Clock Co., Thomaston, is now in the employ of the New England Watch Co., Waterbury.

W. F. Winslow and G. P. Owen have assigned to the William L. Gilbert Clock Co., Winsted, their patent rights on a handle for swinging arbors.

C. B. Rogers and W. H. Lyon are members of a committee of Meriden's leading citizens appointed to further the project of securing a Federal building at Meriden.

The jewelry stores of Bridgeport are closing at 1 p. m. every Friday, instead of closing evenings at 5 o'clock. The change will continue during the month of August.

C. Burton Rogers, as chairman of a committee of the Danbury Business Men's Association, is conducting a campaign looking to the reduction of the price of gas in Danbury.

Walter Hubbard has been re-elected vice-president of the Meriden Savings Bank, also one of the bank's trustees. Edward Miller and Geo. M. Curtiss were also re-elected trustees.

Eugene M. Boughton died recently at his home in Waltham, Mass. The deceased was formerly a resident of Waterbury, where he had been working for the New England Watch Co.

Frank E. White, formerly in the employ of A. W. Austin, Norwalk, was called to the latter place recently by the death of his aunt, Mrs. Rufus Buttery. Mr. White is now engaged in business in Thomaston.

The employes of Factory "P," International Silver Co., Wallingford, will give a clambake at Ulert Grove, Saturday, Aug. 18. The committee of arrangements consists of J. St. Hilare, P. Bridgett and M. Slater.

John Mari, an employe of R. Wallace & Sons Mfg. Co.'s factory, Wallingford, had the first and second fingers of his left hand badly crushed last week, the members having been caught in some of the machinery at the plant.

When Christian Strobel, of Lake & Strobel, Waterbury, died a short time ago he left no will, and it is now announced that he has no estate and that all his property had been transferred to a brother and maiden sister before death.

The Fire Brigade, Factory "M," International Silver Co., held its annual outing last Saturday at Mansfield's Grove. A bounteous shore dinner was served and several athletic events were held, the successful contestants receiving suitable prizes.

The funeral of Christian Strobel, of the Lake & Strobel Co., Waterbury, took place at his home, 114 N. Willow St., that city, at 2:30 p. m. on Tuesday of last week. The honorary pall bearers were A. M. Dickenson, J. E. Sewell, Robert F. Griggs, J. A.

Hynes, Alfred Grescher, Otto Castrop, C. E. Egan and Charles Raymond, the last two representing the Waterbury Lodge of Elks. The interment was in Riverside.

C. D. Morris, superintendent of R. Wallace & Sons Mfg. Co.'s factory, Wallingford, was badly shaken up and severely injured last Wednesday evening, when his automobile collided with a trolley car. Both bones of his left hand was broken above the wrist.

The annual outing of the foremen of the Bradley & Hubbard Mfg. Co., Meriden, was held Saturday at Money Island. The party left on an early train for New Haven, and from there sailed to the island. There were several athletic events, and an appetizing shore dinner was served.

Mayor Landers, of New Britain, will be entertained by Mayor Reynolds, New Haven, Saturday, Aug. 4, when a large delegation from the Landers, Frary & Clark Co. will be at Steeplechase Island. A feature of the outing will be a baseball contest between the New Britain Association and the Newfields.

The retail jewelry store of Mrs. A. Jaffe, 457 State St., New Haven, has been attached in a suit brought by Joseph Rofes to recover on a note of \$230 with interest at 5 per cent. Rofes claims that the note has never been paid, and demands \$300 damages. The case was made returnable to the City Court, Monday.

Leopold Simons, New Haven, has the sympathy of his many friends in the trade owing to the recent death of his wife at Sharon Springs, New York. The deceased had been ailing for about a year, and had been taken to Sharon Springs in the hope that the change would benefit her. The interment took place in New York.

The Landers, Frary & Clark Foremen's Club, New Britain, was the guest of President Charles F. Smith, of the company, at Schuetzen Park Saturday afternoon, July 28. The club members occupied a special car leaving the center at 1:07 o'clock. Dinner was served at 1:30, and after the dinner there was a programme of athletic sports.

The silversmiths of Factory "E," International Silver Co., Wallingford, will give an outing at Gehrman's Grove, Saturday, Aug. 11. They will play a game of baseball with the finishers in the sterling department for a purse of \$25. The outing committee is composed of Thomas Mahon, F. A. Morse, Gustave Burke, Emile Lee, Prospect Massicotte and Louis Crump.

John J. Brown, Hannibal, Mo., and his brother, T. A. Brown, Quincy, Ill., have started on a trip to Chicago and New York to buy supplies for the holiday trade.

Roy D. Parker, a watchmaker, of Goshen, N. Y., has invented an automatic typewriter, which relieves the operator of shifting the carriage. With this machine one can write continuously and as rapidly as desired without taking the hands off the keyboard. It is made with a tabulating attachment, and the paper is placed in writing position automatically. Several offers from manufacturers have been received by the inventor, but as yet he has not felt disposed to accept them, and it is possible that a company will be formed to place the machines on the market.

Mainspring Don'ts

Simple Hints for Those Who Handle Mainsprings

Don't fail to provide yourself with the best mainspring winder that can be obtained. See that the hooks on all arbors of the winders are no longer than the thickness of the thinnest spring, and thus avoid kinking, and therefore unnecessary breaking of mainsprings.

Don't use a mainspring that is too long, because it fills the barrel and prevents that part, or the mainwheel, from making the required number of revolutions, with the consequence that the watch will not run as it should after each winding.

Don't use a mainspring that is too strong, because it will set, increase the percentage of breakage and injure the watch.

Don't use a mainspring that is too wide, and be sure that the tip and brace do not extend beyond the limits of the cover and barrel.

Don't forget that a mainspring should not occupy more than one-third the diameter of the barrel, thus leaving two-thirds to be divided between the arbor and winding space, to enable the watch to run about thirty-six hours.

Don't expect a mainspring to be flat if you put it in the barrel with the fingers. This method usually injures the spring, gives it a cylindrical form, and thereby increases the friction in the barrel.

Don't bend the inner or outer end of the mainspring with flat-nosed plyers, but provide yourself with specially made round-nosed pliers which will give a circular form to these parts, prevent short bends, contract the inner coil, and thus secure a closer fit to the barrel arbor without injuring the spring.

Don't expect other than a properly fitted flat mainspring with rounded edges to produce the least friction in the barrel, allow the greatest amount of power to the train, and give the best results as to time, service, etc.

Don't expect a mainspring to always endure extreme changes in temperature, or electrical disturbances, or straightening at full length, or neglect from lack of cleaning and oiling.

Don't expect a watch that needs cleaning or other repairs to run satisfactorily by merely putting in a new mainspring.

Don't expect a mainspring to plough through too much dirt.

Waltham Watch Company

Waltham, Mass.

THE HOROLOGICAL REVIEW.

An Artistic Clock in Goslar.

THE German city of Goslar, so picturesquely situated in the much-visited Hartz Mountains, can boast of a work of art which, from an artistic and technical standpoint, has few equals. We are making no extravagant claim when we assert that Goslar owes its attraction for visitors, in part at least, to the renowned art clock by Wecken, a work which annually causes thousands of tourists from every country of the civilized world to go quite a little out of their way to see it.

The circumstances which led to the construction of this remarkable clock are quite out of the ordinary, and are connected with the fortunes of the former royal house of Hanover. A miniature altar, borne by the sculptor Hermann Wecken in a procession of the citizens in homage to the last king of Hanover, about 40 years ago, caused a great stir; the king summoned him to an audience and Wecken was privileged to present the altar to his sovereign.

In the audience Wecken received the most unstinted praise for his skill from the king, who at the same time expressed a wish that the young artist should produce something still more important, something fit to be placed in the chapel of the palace of Marienburg, (Hanover), and which could be used by the king as a present to his spouse Queen Marie, of Hanover.

Stimulated by the encouragement of his sovereign Wecken set about his task. Five years of intense meditation and untiring toil passed away. From Wecken's workshop issued a work, perfect in idea and execution—a work which has not a great number of equals as a masterpiece of horological science. If we consider the exquisite artistic harmony shown in its construction and its wealth of figured work, we shall undoubtedly place it among the finest specimens of decorative art.

The work was completed June 14, 1863, and Wecken took the necessary steps to convey his creation, on which he had expended all his talent, knowledge and skill, to the king. Ominous clouds now gathered on the political horizon of Germany, and the fratricidal war between Austria and Prussia swept like a storm wind over the country.

The proud house of Guelph lay shattered by the hurricane; the ill-fated king lost his country and his crown, and Wecken was naturally compelled to abandon any hope

that his royal patron would remember the order given five years before. When the king was forced to leave his country, Wecken decided, after much persuasion, to exhibit his artistic clock publicly. The writer is indeed at a loss what to admire most; the conception which gave birth to the whole work, the fine and scrupulously accurate mechanical work, the astonishing perfection of every detail or the consummate feeling for beauty with which the master was inspired when he constructed his world-renowned clock. There is not a sin-

HERMANN WECKEN.

gle superfluous detail, while nothing essential has been omitted; the whole work is characterized by harmony and clearness and bears abundant testimony to the matured skill of its creator. Mr. Wecken is 71 years old and is still hale and hearty.

The structure, consisting of six tiers, rests on a socle or base, with three steps and a pedestal 70 centimeters in height. The first tier is supported by Doric columns, between which an arrow of ebony shows the days and months on a calendar disk. On this disk are also four splendidly carved female figures representing the four seasons and symbolizing the flight of time, the period of blossom and decay, from youth to old age.

The calendar work is automatic and requires no regulating. In niches between the columns stand the four evangelists—

Matthew, Mark, Luke and John with their attributes.

On stylobates at the sides of the second tier, which has a graceful openwork balcony, and is constructed in the Ionian style, are Elijah with his mantle of camel's hair and Moses with the tables of the law. In the same tier, above the date hand, is an altar in the Greco-Roman style with figures representing the Annunciation and the birth of Christ. This altar consists of two parts and has a contrivance whereby on the birthday of any member of the former royal house of Hanover the portrait of the member is made to appear in front of the upper part of the altar with a card of congratulation in front of the lower part. Both remain visible for 24 hours and then disappear. Four armed foot-soldiers protect the law given by the prince.

The third tier, built in the Corinthian style, displays the Crucifixion; the whole work, in fact, bears a marked Christian character. The four sacred persons who were present at the death of Christ stand between the pillars to the right and left of the scene of Crucifixion. Each stands in an arched niche, inlaid with ebony. The figures themselves are made of palm-wood, making an effective contrast with the ebony.

An angel with a trumpet stands at each end of the front of the fourth tier; the latter is constructed in the Corinthian style and is smaller than the tiers below. Christ, His hands stretched out in blessing, stands in a portal in the middle; on each side of Him is a folding door. The Apostles are also seen in this tier.

The fifth tier, in the Graeco-Roman style, is still smaller than the fourth. It is formed by eight double pilasters placed octagonally and forming the foundation of an octagonal socle with six steps. Between the two middle pilasters is a dial showing the mean time. Two angels, one on each side, strike the hours and quarters on bells. Sixteen Greek columns supporting a dome with a cross constitute the sixth tier and worthily complete the structure.

The striking mechanism is set in motion at the end of every hour. First, the angels at the top raise their hammers to strike the bells. The hour bells are a tone lower than the quarter bells. The Crucifixion begins at the last stroke of the hour. The centurion standing by the cross raises his staff as a signal; then the soldiers standing on ladders behind the cross begin to strike the nails through Christ's hands. The bell for

Wise Dealers Set Store by the ELGIN

The wide-awake dealer knows the value of a good stock of Elgin Watches. He knows that they are a good criterion by which to have the public judge his store.

He knows that Elgin customers are satisfied customers, and that satisfied customers are the very foundation of successful business. The

San Francisco Office, 206 Kearny St.

prayer strikes with muffled tones. Then one of the soldiers standing below the cross, at an order from the centurion, gives the sponge to Christ, and another immediately afterward pierces his side with a spear.

The Crucifixion takes place on rocky ground; in the background are seen the pinnacles of the Holy City. The two crucified malefactors are also shown, one on

from the right folding door at the side of the Saviour, draw near to Him with raised heads, receive His blessing and disappear through the door on the left. At the moment the last Apostle vanishes, the same mysterious sound is again heard, and the Apostles reappear as if magic in their niches.

During the Benediction the angels on the fourth tier raise their trumpets and play

AN ARTISTIC CLOCK AT GOSLAR, GERMANY.

each side of the Saviour. After the Crucifixion a set of bells in the temple-shaped upper tier plays the hymn, "Nun kommt der Heiden Heiland." Then the hour strikes again; at the last stroke a momentary and startling sound is heard, during which the Apostles on the fourth tier disappear into the interior, to emerge, one by one,

in thirds the hymn, "Lobt Gott Ihr Christen allzugleich." Deep silence then reigns again, broken only by the monotonous tick-tack of the pendulum.

The store of Edward Vail & Co., Wichita, Kans., has been remodeled and equipped with new fixtures.

Vibration of an Electric Plant at Greenwich Interferes with Work at Famous Observatory.

IN a syndicated letter from London to several leading American newspapers, Percival Phillips says that several thousand unimportant individuals living near Greenwich threaten to upset navigation and clocks throughout the world. They have demanded, as necessary, the erection of an enormous electric generating station near the famous observatory. The vibrations resulting from this power plant are already putting the astronomer's calculations out of gear, and conflict among the world's clocks is threatened.

Inasmuch as railways are dependent on Greenwich for their running time, the situation is regarded by scientists as exceedingly serious. The sleepy House of Lords is taking more than passing interest in the controversy between the Astronomer Royal and the London County Council, which is erecting the power plant for the benefit of the residents of Greenwich town. As Lord Ellenborough points out, the completion of the power plant means that the site of the observatory must be changed. If in obedience to the County Council the point of reference is changed, Great Britain may have remonstrances and possible demands for compensation from all parts of the world.

Lord Kelvin, whose reputation as a scientist is well known through America, emphasizes the danger of changing the observatory site, and, in consequence of his warning, the Government has promised that all the astronomers in Great Britain shall look into the matter, and the opinion of the Washington observatory may also be asked.

Lord Ellenborough voiced the sentiment of the public when he sarcastically observed, in the House of Lords this week, that the next thing the County Council will do will be to order the equator to leave the tropics, and not to take more than its fair share of sunshine.

Clock Making in Nagoya, Japan.

A DISPATCH from Yokohama, Japan, states that the clock-making industry in Nagoya, for which that city has obtained a great reputation in Japan, is at present in a very prosperous condition, manufacturers having more orders on hand than can be executed promptly.

The total number of clocks turned out in Nagoya during March last was 32,385, of which 21,594 were hanging clocks, and the rest standing clocks. The quality of the timepieces made in Nagoya is gradually improving in consequence of the enforcement of the inspection rules, and at present the number of clocks rejected by inspection is not more than eight per thousand. By the increase in demand and the advance of the copper market, the price of timepieces has advanced to an average of Y 29 per dozen. —*Japan Chronicle*.

F. M. Watts, Kirksville, Mo., accidentally took an overdose of chloral hydrate, one night recently. He was critically ill, but is now convalescent.

House Clocks with Simple Electrical Winding Work, for Operating the Going and Striking Trains Simultaneously.

(Translated expressly for THE JEWELERS' CIRCULAR WEEKLY from the *Deutsche Uhrmacher Zeitung*.)

THE special feature of this electrical winding arrangement is that a single electromagnet can easily raise two or more weight levers, each of which when falling actuates its own work. A main work or master clock can, for instance, be placed by this method between two common work-plates by the side of a train, and the latter can then attend to the closing of the current for an entire series of secondary clocks. Moreover, in the case of clocks with striking work, both the going and striking trains can be wound up, if desired, by a single electromagnet, it being quite immaterial whether both levers descend uniformly or not.

Whenever a circuit is closed, which oc-

FIG. 1.

curs once every five or 10 minutes in a going train, the levers are all simply made to fly up to their highest point, though one lever may have fallen a considerable distance, another only slightly and a third not at all. If the lever in the striking work is so arranged that one fall is enough for the maximum number of subsequent strikes (12), then without any further operation at the next closing of the circuit, which follows every hour or half-hour stroke, the lever will be again raised to its highest position.

Fig. 1 shows the exterior of a regular movement provided with this electrical winding contrivance. It differs, as will be seen, from an ordinary spring regulator movement only in having two coils of an electromagnet (the right hand coil is shown in the figure), fixed in the sides at the bottom and the weight lever rising obliquely in the position of impulse.

As it will be more instructive to study a work of this kind with two weight levers, we give an illustration of one of the latter in Fig. 2, and in order to show the portions of the electrical winding mechanism between the work plates, the front plate is represented as for the most part broken open. The mechanism operates both the going and the striking train.

The arrangement is very simple. u and s are the two poles of the electromagnet, between which the armature, a , turns round on its axis, c . To the left extremity of the armature a winding arm, f , made of strong wire, and bent back at k , is fixed, the horizontal end (k) of which throws up the

two levers, i and j , when contact is made, in consequence of which the armature, a , turns round its axis to the right.

Fixed to the axis, c , of the armature, a , is also a forked switch arm, b , which not only closes, but immediately afterward breaks the circuit in a way presently to be described. At present we will consider the two weight levers a little more closely. As will be seen from Fig. 2, the lever, i , belongs to the going train. Connected in the usual way with the center wheel, f , is a fine-toothed ratchet, g' , with which the pawl, m , of the lever, i , is geared in such a manner that the clockwork is set free when the lever flies up, but catches when the latter, driving the work, descends.

In addition, a maintaining work is placed behind the wheel, g' , to supply the motive power during the short space of time that elapses whenever the lever, i , flies up. The lever, j , of the striking work is arranged in the same manner. Here, also, a maintaining work is placed behind the ratchet, h' , fixed on the arbor of the extra wheel and driven by the pawl, w , in the direction of the movement. As the jerk when the armature oscillates is somewhat violent, and the danger consequently arises that the latter may again fly back in the opposite direction (in which case another undesired closing of the circuit would take place), a safe and at the same time simple stop contrivance has been devised for the armature.

A bent lever, r , turning round r^3 , is disposed in such a manner that its shorter arm, r , when in a position of rest, $i. e.$, as soon as the armature swings to the right at the closing of the circuit, is in contact with the stop, t , in the position shown by the dots. In this position it locks the right end of the armature, a , and both levers are now raised. When one of them descends, it strikes on one of the pins, r^2 or r^4 , in the longer arm, r^1 , of the locking lever (the lever i on r^4 , the lever j on r^2) and pushes this long arm, r^1 , downward. The result is that the short arm, r , again releases the armature and when the latter comes into the position shown in Fig. 2 the circuit is again closed.

As already stated, the circuit is closed as well as broken by the forked switch-lever, b , fixed to the axis, c , of the armature and with the aid of a star connection. The latter is a double wheel, being composed of two four-armed crosses or stars. The front star wheel, u , with the pointed teeth, serves only for conducting—on, as, when the armature turns to the left, the pin, y , of the forked switch lever engages in the lower tooth of the star wheel, turning the latter to the left; when the armature turns to the right and the lever flies upwards, the pin, x , again makes the star wheel, u , turn a certain amount—in all about 90 deg.—in the same direction.

The star wheel, v , at the back, is used as a contact disk. It is in constant electrical connection with the contact spring, p , which touches it behind, and is for most of the time insulated from the second contact spring, q . For, at the extremity of the latter are two pins, the longer of which, d , falling between the teeth of the star wheel, v , is made of insulating material, while the other pin, e , not visible in the drawing, as it lies below the center of the contact disk,

v (in the direction e), is made of metal. If the contact disk, v , is in such a position that the insulated pin, d , lies on one of the four flat arms of the star wheel, the current is interrupted, since the contact pin at e , being shorter, cannot touch the contact disk.

But as the armature swings slowly back to the left under the action of the weight lever, the pin, p , of the switch lever, b , makes the star wheel, u , also turn to the left, and the insulated pin, d , finally falls away from the arm of the contact disk, v . Then, pressed by the spring, q , it falls between the teeth lying between two adjacent star wheel arms till its descent is arrested by the metal pin, e , striking the contact disk.

At this moment the circuit is closed, the armature is attracted by the electromagnet,

FIG. 2.

and swings vigorously to the right, throwing the weight lever upwards. At the same time the pin, x , as already stated, causes the two star wheels, u and v , to turn further, and the metallic pin, e , slides along the contact disk, v , so that the point of contact is pushed aside and the closing point separated from the opening point. This increases the certainty of the action.

Immediately before the next star wheel arm meets the insulated pin, d , the blunt end of the spring, q , slides into the cavity of the contact disk; consequently the circuit, without being broken, is no longer closed at the point of the contact pin, but around the conical surface just above it. If the star wheel turns a little more, the cross arm will press upon the slope of the insulated pin, d , and push the latter against the surface of the arm; the contact pin, e , will then be raised suddenly and almost perpendicularly out of the cavity and the current will be interrupted.

The circuit, therefore, is not broken at the point of the contact pin; consequently the injurious effects of very high tension (burning of the point of contact by the spark) are avoided. It is also an advantage that the circuit is closed suddenly and with a certain amount of force by the falling of the insulated pin under the pressure of the spring, q , and afterwards opened again with equal rapidity.

THE COMMERCIAL MEANING OF "SERVICE"

THE WORD "Service" is being used very widely in business. It means more than the mere exchanging of goods for money; it applies to certain convenient methods of conducting business, which add to the customer's satisfaction without necessarily increasing the cost to him. Good products plus good service mean the highest efficiency. As applied to watches, such efficiency is here afforded.

Why Organization is Beneficial to the Retail Jeweler.

(Extract from the speech of PRESIDENT A. C. GRAUL, before the Pennsylvania Retail Jewelers' Association.)

TO begin with, there is too little goodwill, too little friendship, between members of the craft. If a jeweler has occasion to refer to other jewelers, particularly near neighbors, he will either directly or indirectly, make the others appear as nearly the sum of human depravity and dishonesty as possible. The fact is that the jeweler's apprentice must always be of good character and have recommendation before he can get a position in the trade. From these selected youths eventually come the retail jewelers, the men who do all that they could to fall out with each other. They all need and require a high degree of technical knowledge and skill, and they are systematically trained to be affable and courteous, but they speak ill of one another, and this fact is largely responsible for many of the evils which they suffer.

A cohesive and comprehensive organization will go far toward removing this primary evil. One thing to be early thought of in studying the situation is the condition of our workmen. In no trade requiring character, intelligence and skill of the standard necessary for our workmen, are the wages as low as they average for the watchmaker and jeweler. It takes longer than most trades to become competent, and the conditions of the work early undermine or destroy such essential qualities as eyesight, nerve poise and digestion. Then, why are they so poorly paid? In my judgment it is because the master jewelers are so much at enmity with each other that they will accept work at too low prices. Thus the pace is set and the neighbor becoming "rattled," goes him one better or worse.

It is a fact that almost without exception the employer who pays a workman \$20 a week takes a goodly portion of the wages out of the profits of his sales, which for other causes have already been sadly curtailed. The keen struggle for existence makes the jeweler prone to selfishness, makes him begrudge his neighbors even the appearance of prosperity, and he therefore seeks to belittle them in the eyes of the public as much as possible.

Retailing jobbers are truly a "thorn in the side" of the legitimate retailer, doing him the most unfair and irreparable injury. Do

not retailers themselves break the soil and sow seed from which the retailing jobber reaps his harvest? How many of those present have not piloted a customer to where a big selection may be had, telling the customer that his jobbers accommodate him by permitting him to take his customers there. (One gentleman indicates by a gesture that he is not guilty.)

Educate your customers, your neighbors, your friends and your relatives that there is only one place to buy jewelry, and that place is the retail jewelry store—your store. It goes without saying that jewelers do not take their customers to a department store for jewelry. Many jewelers will go there for a dishpan if it can be had 10 cents cheaper in price and 10 cents lower in quality than in the local and legitimate hardware store. Likewise they go to the department store for a carpet, a pair of shoes, a necktie or a suit of clothes. Thus the department store's delivery wagon comes to the jeweler's door and unloads his purchases. The jeweler has set the pace. Neighbors, friends and customers reason that if the store is good for Mr. Goldcase it will also be good for them.

You can cry yourself hoarse against the quality of department store goods and it will be of no avail. You have already spoken disparagingly of the other jewelers and they have paid you the same compliment. In short, you have destroyed your influence. The mail order house, the fake shops, the false quality stamps, can be overcome if the craft are friendly before the public and united before the jobbers and manufacturers.

Taking up the question of favoritism by manufacturers, Mr. Graul attacked the methods of the so-called "Big Four" companies in certain specific instances, and ended by reading from a recent speech in Congress by Representative Rainey on the same subject, which was published in **THE CIRCULAR-WEEKLY** a few weeks ago.

Advertising writing looks as easy to the amateur as roller skates do to the small boy—both get a good many bumps before they arrive.

A "quarter horse," like an advertisement in a medium of fake circulation, may start all right, but loses in the long finish.

A standing advertisement is like your wife's last year's dress—people know it is the same old dress, but they're not interested.—*White's Sayings.*

How Organization May Prevent Unfair Competition.

(HERMAN C. WATTS' address at the recent convention of Retail Jewelers' Association of Illinois.)

THE past few months have witnessed a widespread movement in the organization of the retail jewelry trade. The one direct cause of this growing demand for organization is unfair competition, which has originated with the mail order houses and department stores. Their cut-price methods of selling watches and kindred lines, more especially watches, they use to attract trade for other lines, on which they can make a liberal profit. The question arises—can those manufacturers, who maintain a fixed retail selling price of watches or kindred lines, lose anything by the organization of the retail jewelers? Certainly not; for mail order and department houses cannot sell even standard makes of watches except at cut prices, and anything that helps the legitimate retail jeweler's progress is a direct benefit to these manufacturers.

However, since the organization of the various State associations, there has arisen some opposition, which is actively engaged in trying to hamper the progress of organization. Possibly some interests have been successful thus far in preventing the conventions from adopting resolutions on the all-important issue, the adoption and the universal maintenance of a retail price of watches. Deprive the mail order houses and department stores of the right to cut prices on standard watches and also kindred lines (as the average purchaser of jewelers' wares, except watches, cannot tell whether prices are high or low, for he cannot judge the quality)—deprive these concerns of the right to undersell the legitimate jeweler on the standard makes of watches, and the public will take it for granted that if they undersell the jeweler on other goods in his line, these goods are of inferior quality.

The opposition to maintaining prices cannot prevent the jewelers from organizing for trade protection, neither have they behind the movement the strength to resist the demands of such a body; therefore, brother jewelers, our strength lies in the adoption and also the maintenance of the retail price of watches.

R. Grimes, Dows, Ia., has shipped his stock to Waterloo, Ia., where he engages in business.

Storekeeping Department.

Side Lines For Jewelers.

(By N. NIELSON, Harlan, Ia., Vice-President Iowa Retail Jewelers' Association, before the latter's recent convention in Des Moines, Ia.)

(Continued from issue of July 11.)

STATUARY sells well when first put in stock, but usually does not move very fast after having been on display for some time, for the very good reason that your customers get to notice certain pieces and will remember them, and after that you will find it hard to sell them. This, of course, applies mainly to the smaller places and not to the cities.

Another line that you find in the jewelry stores is the piano and organ line, and I at one time handled quite an extensive line of those goods, but all I have to say in regard to this line is that, when any one of the brethren feels tempted to put in a stock, think twice before acting and then "don't." I made my line pay a profit while I carried the goods, but I will state that as far as my experience went I do not consider that the instrument trade has come down to a basis where a self-respecting man can handle them and keep his good opinion of some of his fellow men, and especially some of those engaged in the instrument trade, but I will not go into hair-splitting on this point here, and I will only say that when the manufacturers stop furnishing instruments to the consignment man, sell to legitimate dealers only and establish a fixed retail price, not until then will I recommend the line to the retail jeweler as a side line.

Going back to what I consider the more important lines, I will say that I found cameras to be a most excellent line. Buy only standard goods and you are protected on the retail prices, which assures you a fair profit on every sale made, but first of all make it a point to understand photography so that you can give your customers any information they may want, and also so you will know just what to buy for your stock. You positively cannot make it a winner unless you post yourself and also your salesmen if you employ such. If this advice is taken to heart I will recommend this line as one of the most important ones and one that ought to receive first consideration, if the field is fairly open, as far as competition is concerned.

Phonographs are also on the list for first consideration, if they are not sold too extensively by other concerns in your city. It is a splendid line in some ways and in other ways it is not very desirable, for we should always bear in mind that our side lines ought not to interfere with our regular jewelry line, for this should always be our first consideration. We are jewelers first and last, every other line is a side issue, and your customers in the jewelry line will not always appreciate hearing "Hiawatha," "Bedelia," "My Loving Henry," or any other old thing while they are deciding on some valuable purchase on a busy day. Such scenes cannot be avoided with phonographs as a side line, although if you were to ask me if I would consider it a good side line to add I would answer

"yes," but I would not advise any one to handle it unless a fairly extensive stock was carried.

Small musical instruments are always good as a side line because it takes a small city to support an exclusive music store, and hence the jeweler's opportunity. This line, if properly pushed, ought to bring many a dollar to the enterprising jeweler making an effort to push them.

Sewing machines are good. Carry not less than 10, and if possible up to 20 machines of all grades, from the cheapest to the very best. Do not employ canvassers. Always have on the floor a couple of the very cheapest machines at \$10 to \$12, but push good machines as much as possible; at the same time let people know that you have cheap machines if they want them. Do not try to make but a fair profit only on any machine, and you will be surprised to see how many machines you can sell and what a help the extra profit will be to you to help pay expense. I will not say anything in regard to stationery, because I have never had any experience, but I will say that I have seen jewelers sell it with very much success.

The lines as outlined cover practically the entire list that I would recommend as side lines for jewelers. There may be others, but in my estimation I would let the other stores sell them. To the jeweler that now has the side lines I will not try to offer a great many suggestions for, as stated before, he may have had a great deal more experience than I have, and to the city jeweler I will say that I do not propose to offer any suggestions as to what he ought to do and ought not to do in regard to side lines, but I will say this to any one contemplating side lines or who is now selling them—do not add a single line until you are ready for it, then put in a good stock and carry it right, master one line thoroughly before adding another. And treat every successive line in that manner. This I consider good advice for any jeweler.

Now, here I will mention a thing or two that may not come in under my subject in one sense, while in another way it does. This applies to the jewelry trade in general all over the country, and this is advertising. None of your side lines will be a complete success unless they are advertised and advertised right. We will assume that you are all good advertisers for your regular lines of jewelry, but do not stop at that. Advertise your side lines as soon as you have them properly displayed, and first, last and all the time tell the people what you have to sell, give descriptions of your goods and prices of them. Always give prices, for prices are what the public is interested in. You do not need to cut prices, unless you wish to in order to get the trade to come your way, and you do not need to cut your competitor's prices on anything which he might happen to advertise. Take something else and advertise it, word your ads. so that the public will be interested, and then quote the right price. Follow this advice and the results in trade which it will bring to you will surprise you.

Another very essential thing in advertising your business in general is a good

supply of cuts to illustrate the goods advertised. The cuts take up extra space, but 10 people will see your ads. with cuts where only one would notice them without cuts, so you will be the gainer.

By following my advice any jeweler will more than hold his own in competition with mail order houses and department stores. Judicious advertising, backed by the goods and the right salesmen behind the counter makes failure impossible, be it selling side lines or any other lines. By following the plan outlined I have built up my business to what it is now and practically driven the competition of the mail order houses in my lines out of existence in my territory, so I feel that I have some rights to claim what I do and also to recommend it for the jewelry trade.

As I am only allowed a few minutes for the reading of this paper I will have to be brief, but I will add the following before finishing. Advertise everything in season, and in side lines push your cameras in the Summer, for they are the sellers when everything else goes slowly. Put your efforts on the phonographs in the Winter time, sewing machines in the Spring and Fall, etc. Push goods all the time, but push harder in the regular season.

I will stop now or I do not know when I will get through, for advertising is one of my hobbies, since it is one of the main things that has made my success possible.

[THE END.]

More About Stock Registration.

WHILE recently looking over some back numbers of THE CIRCULAR-WEEKLY, I was interested in one concern's system of registering and pricing stock, described in the issue of Jan. 3, 1906.

This system is all right as far as it goes, but an improvement may be made by adding to the register a place for entering the name of the customer who purchases the article, and the date sold, on the same line as the original entry. The record will then show, after posting each day's sales, the stock on hand for the following day.

At the end of the year preparatory to inventory, the entries still unposted should be entered in numerical order in a new stock book, and stock should be taken in the ordinary manner by the clerks, listing the articles on a separate sheet, according to the tag and description. These sheets can be assembled and checked against the stock book by the bookkeeper.

It will depend upon the class of business which the jewelry house is doing, as to whether or not it will be advisable to show the cost on the tag on each article. It is not a good practice, if you expect the salesman to sell the article at the selling price as shown on the tag, as it gives him an opportunity to use his own judgment, and sometimes weakens his position with the customers. However, if the competition is keen, and it is desired to have an asking price, and if the customer does not want to pay such price, a margin could be allowed, and a second price shown and regarded as the bottom price at which the article can be disposed of. This, however, is not good business in high grade establishments catering to first-class trade.

[Answers are also solicited from our readers to the questions published on this page.]

QUESTION No. 1629.—A Test for Diamonds.—How can I test a diamond so I can distinguish a genuine from a counterfeit? A. T.

ANSWER:—An Italian chemist, Massimo Levi, gives the following as a test for diamonds: If you have a doubtful stone, put it into a leaden or platinum cup with some powdered fluorspar and a little oil of vitriol; warm the vessel over lighted charcoal in a fireplace or wherever there is a strong draught to carry off the noxious vapors that will be copiously evolved. When these vapors have ceased rising, let the whole cool and then stir the mixture with a glass rod to fish out the stone. If you find it intact it is a genuine stone, but if it is false it will be corroded by the hydrofluoric acid that has been generated around it. A paste diamond will disappear under the treatment.

QUESTION No. 1630.—Tinning Brass and Copper by Immersion.—How can I make a solution that I can use for tinning pieces of brass and copper by simply immersing? Also how to make a solution for tinning with the battery process? T. B. C.

ANSWER:—For tinning by immersion prepare a solution of ammonia alum, 17½ ounces; boiling water, 12½ ounces; protochloride of tin, 1 ounce. After the articles to be tinned are properly cleaned they are placed in the above solution while boiling, and continue the boiling until the articles are properly whitened. To plate with tin and the electric current, prepare the bath by using the following proportions: Potassium pyrophosphate, 12 ounces; protochloride of tin, 4½ ounces; water, 20 ounces. For the anode pure Banca tin should be employed, and then a moderate current should be used. Finish with a fine scratch brush. For tinning small iron castings, clean and boil them with scraps of block tin in a solution of cream of tartar.

QUESTION No. 1631.—Lustrous Pearls.—Will you inform me how to keep pearls so that they will retain their luster? G. D.

ANSWER:—The best means for preserving pearls in their normal condition is to place them in a box or metal drum filled well with calcined magnesia in order to exclude the air and gases.

QUESTION No. 1632.—Etching on Large Cups.—Please suggest a better way of etching on large cups with round surfaces than by laying them in the acid. A. T.

ANSWER:—The surface of any object to be etched may be limited by being surrounded with a composition of asphaltum cement or a similar substance.

QUESTION No. 1633.—To Polish Tortoise Shell Back Combs.—How are tortoise shell

back combs polished after they get shop-worn and dull? F. X.

ANSWER:—Tortoise shell may be polished by a revolving buff of a soft texture charged with rotten stone mixed with oil, or tripoli, or putty powder, the latter also mixed with oil.

QUESTION No. 1634.—To Prevent Jewelry from Tarnishing in a Safe.—My gold and plated jewelry turn red in my new safe. How can I prevent this? G. B.

ANSWER:—Foul air is probably the cause. Gum camphor, placed in the safe, has a tendency to prevent this trouble.

QUESTION No. 1635.—Cement for Bone and Glass.—Where can I get a good cement for repairing bone fans, combs and glassware? H. S. F.

ANSWER:—Rosenthal Mfg. Co., 3163 Cottage Grove Ave., Chicago, and Van Stan's Stratena Co., 1211 N. 60th St., Philadelphia, Pa.

QUESTION No. 1636.—Restoring Brilliance of Diamonds After Fire.—Is there any acid which will restore brilliancy of diamonds that have been through a fire? S. F.

ANSWER:—No acid or any chemical substance is known which will restore the brilliancy to a diamond which has been overheated. It is necessary in such a case to have the diamond repolished.

QUESTION No. 1637.—Receipt for Making Lacquer.—How is lacquer made? C. A. K.

ANSWER:—A good lacquer for silverware is made from spirits of wine to which a little collodion is added. With this mixture paint your silverware. If you have a great number of articles to be coated it would pay to fill a vessel large enough to contain each one of your silver articles, and dip them into it; then hang them up to dry in a room free from dust. The fluid dries quickly, leaving a thin, transparent, absolutely invisible film upon the silver, and protects it from the influence of the air. Through a mixture of aniline colors soluble in alcohol, the so-called "brilliant varnish" is obtained for the use of gilded ware. By immersion in hot water the invisible collodion film can be removed at any time. The best thing to do, however, is to use collodion lacquer, which can be obtained from any manufacturer of silverware or from jewelers' material stores.

It is reported that a manufacturing jewelry establishment will soon be started in the Minnehaha building, in Sioux Falls, S. Dak.

Practical Advice on Glass Drilling.

Editor THE JEWELERS' CIRCULAR—WEEKLY:

In your issue of July 11 is an answer to question No. 1605, in "Workshop Notes and Queries," as to drilling holes in glass. The answer is good as far as it goes, but it does not go far enough.

The drilling of glass with a steel drill is a "paradox." The slower the drill is rotated the faster it cuts. The saturated solution of camphor in turpentine, with or without ether, is all that could be desired. There may be other shapes of drills, but one shaped like the accompanying illustration is easily made, and quickly sharpened when dull. Figure No. 1 is an edge view; No. 2 is a side view. Make the drill out of an ordinary round file, leaving the temper just as it is. Simply sharpen the small end of the file as shown, and insert the opposite end in a large-sized watch screwdriver or spectacle screwdriver, No. 1169 or 1171.

Hardy's lists are both good. Do not try to use a cut of file finer than No. 2. Do

FIG. 1.

FIG. 2.

not disturb the file teeth toward the end or the drill, except on the two sides. The file teeth on the edge of the drill act as a reamer while drilling. In reaming out a hole after drilling, use a No. 2 round file, and rotate it from right to left (at the top). The files are cut with a sort of spiral cut. If you revolve them the other way they will screw into the hole and break the glass.

Use the drilling solution freely and revolve the tool very slowly by hand; then you can feel it in case it begins to bind.

If you use the drill for making holes in rimless lenses, first put the strap on a stud over the lens, where you want the hole to be. Have the strap holes large enough to accommodate the drill. Have your drill always sharp. Take the drill, dip in solution, place upon the glass to be drilled, and by hand rotate it slowly back and forth, giving it a moderately firm pressure. Drill from both sides, go slowly, and reduce the pressure as you feel the drill meeting the hole on other side of lens. Accidental breakage of glass will be less than 1 per cent. Average time to drill an ordinary lens is 30 seconds.

J. M. I.

W. B. Sherratt, Lakepark, Ia., has sold out to C. B. Chrysler. Mr. Sherratt will move to Humboldt in the same State, where he will continue business.

At a recent meeting of the trustees in Bath, N. Y., a new town clock was formally presented to the village. The timepiece will be erected at the entrance of Pulterny Sq. The clock was fully described in a previous issue of THE CIRCULAR—WEEKLY.

Devoted to Art Pottery, China, Marbles, Bronzes, Cut and Decorated Glass Ware, Bric-à-Brac, Lamps, Art Metal Wares, Fancy Goods and Kindred Lines.

Recent Reappraisements of Statuary, China, Cut Glass, Pottery, Etc.

REAPPRAISEMENTS of china, statuary and similar lines were announced last week by the Board of United States General Appraisers, New York, as follows:

Alabaster statuary from Itala Cherici & Co., Rome, exported May 2, 1906, entered at New York (File No. 10351); findings of Waite, G. A.: Alabaster statue and column, entered at 210, advanced to 235 lire for both.

White china from O. & G. Guthrie, Carlsbad, exported March 6, 1906, entered at Newport News (File No. 39418); findings of Hay, G. A.: Tea cups and saucers, 37, entered at 2.04 crowns per dozen; A. D. cups and saucers, Paris, entered at 2 crowns per dozen; plates, 21 cm., Paris, entered

entered at £3 18s. 6d. Add case. Less carriage. No advance.

Japanese merchandise from Morimura Bros., Kobe, exported Aug. 23 to Dec. 30, 1905, entered at New York and Port Townsend (File Nos. 37876, 38030, 38093, 38204, 38276); findings of Waite, G. A.: Porcelains, 245/2, flower pots, entered at 80 yen per set, packing included; teapots, 235/4, entered at .04½ yen each; do., 235/2, entered at .14½ yen each; dishes, 227/63, entered at .06 yen each; plates, 227/3, entered at .03½ yen each; cups and saucers, 226/4, entered at .04½ yen per set; assorted vases and koros, 3 pieces in set, 214/39, entered at 11.88 yen per case of 4 sets; 222/29, tea set, 6 pieces in set, entered at 4.60 yen per set; 222/11, chocolate sets, entered at 3.10 yen per set; 223/82, vases, entered at 1.70 yen per piece; 223/140, vases, entered at 1.25 yen each; 223/76, vases, entered at .65 yen each; 223/125, vases, entered at .45 yen each; 223/142, vases, en-

Magnificent China Service Presented by King Edward to Alfonso.

THE magnificent state dessert and coffee service which King Edward has presented to King Alfonso is a reproduction of the historic service made at the old Chelsea Works in 1763 by order of Queen Charlotte for her brother, the Grand Duke of Mecklenberg-Strelitz. The present Grand Duke lent some of the models for this work.

The service was supplied by Thomas Goode & Co., of S. Audley St., London, who possesses some of the original models. It is hand painted and hand gilded, and consists of the following pieces: Thirty plates,

PART OF MAGNIFICENT STATE DESSERT AND COFFEE SERVICES PRESENTED BY KING EDWARD TO KING ALPHONSO.

at 2 crowns per dozen. And similar goods. Discount, 3 per cent. Add case. Advanced 3 per cent.

Decorated china from Koshin Shokai, Yokohama, exported Jan. 23, 1906, entered at New York (File No. 38843); findings of Waite, G. A.: Porcelain tea sets, 7 pieces, entered at 37, advanced to 55 yen for all.

Cut glass ware from Petrus Regout & Co., Maestricht, exported Jan. 25, 1906, entered at New York (File No. 34625); findings of Board No. 3: Prices as published in reappraisal No. 3907, April 10, 1905. Reappraised value affirmed.

Decorated china from Chieppe & Barbarin and Gustav Balleroy, Limoges, exported Sept. 2, 1905, to Feb. 24, 1906, entered at New York (File Nos. 37368 and 39094/95 (findings of Board No. 2): Prices as published in reappraisal 6940, May 2, 1906, and 6939, May 2, 1906. Reappraised value affirmed.

Polished granite from W. F. Pratt, Aberdeen, exported Jan. 19, 1906, entered at Boston (File No. 38520); findings of Waite, G. A.: 1 Beers red die,

entered at .39½ yen each; 223/133, entered at .34 yen each; 223/92, vases, entered at .50 yen each; 223/18, entered at .25 yen each; 223/93, vases, entered at .23 yen each; 68/68, bowls, entered at .80 yen each; do., 68/70, entered at .75 yen each; chocolate pot, 30/29, entered at .65 yen each; 144/107, boxes, entered at .26 yen each; 162/8, jars, entered at 1.95 yen each; 138/15, fern pot, entered at .90 yen each; 161/39, tankards, entered at 1.45 yen each. To all prices from No. 222/29, tea set, manufactured by Saigo, add 25 per cent; prices above that are net. Vases, 73606, entered at .49 yen each; chocolate pot, 73346/73770, entered at .55 yen each; 2534/34/73770, almonds, entered at .13 yen each; 73435/73778, comport, entered at .42 yen each. Add 10 per cent. on these prices. And similar goods. All advanced 10 per cent. Add cases and packing.

J. B. Pederson, Leeds, N. Dak., has started work for the erection of a modern store building for his jewelry business.

eight square dishes, two curious jardinières with covers, ice buckets, two round bowls, one oval center piece and stand, four oval covered dishes, two oval sugar tureens and covers, 18 coffee cups and saucers.

The china, which is decorated with embossed gilt, bears dark blue panels, at intervals containing gilt insects, moths, flies, butterflies, etc., in relief with floral festoons in between, while in the center is the quaint exotic bird peculiar to the old Chelsea of this date.

W. H. Baird, Waverly, N. Y., has discontinued business.

Taylor & Berlovitz, Newburg, N. Y., have dissolved partnership, and the business will be continued by John W. Taylor.

of the highest quality.

"The World's Best"

A simple phrase, but
brim-full of significance,
as applied to cut glass.
The dealer knows its
truth; so does the buyer.
That's why a lower price
for some other cut glass
than Libbey has no pow-
ers of attraction.

Recent Publications.

SCHMUCK- UND EDELMETALL-ARBEITEN. Eine Auswahl Moderne Werke. By COUNCILLOR ALEXANDER KOCH. Imperial octavo, cloth, gilt, 211 pages, profusely illustrated. Published by Alexander Koch, Darmstadt, Germany. Price, 16 marks (postage extra).

THIS elegant art work is recently from the German press under the above title, which, translated into our vernacular, reads "Decoration and Work in the Precious Metals," being a selection of modern works of leading German, Austrian, English and French artists.

Starting with a preface of two pages, the remainder of this beautiful volume is entirely devoted to reproductions in the best of the process engraver's art of the salient chief d'œuvres of recent years. Perhaps the best method of hinting at the value of the work in the short space at disposal would be to enumerate the names of the various artists represented. They are included in the following list: F. Adler, Munich; C. R. Ashbee, London; Prof. Peter Behrens, Düsseldorf; Franz Böres, Stuttgart; Rudolf Bosselt, Düsseldorf; Prof. Hans Christiansen, Darmstadt; J. V. Cissarz, Darmstadt; Christine Connell; Prof. C. O. Czeschka, Vienna; M. Dufrene, Paris; Erich Erler-Samaden, Munich; Theodor Fahrner, Pforzheim; Alexander Fischer, Kensington; Fröhlich, Bremen; Ernst Moritz Geyger, Florence; Prof. Alfred Grenander, Guild and School of Handicraft, London; P. Hausteine, Stuttgart; M. Herberger, Munich; H. Hirschwald, Berlin; Prof. Jos. Hoffmann, Vienna; Höcker & Son, Amsterdam; Anton Huber, Flensburg; Patriz Huber; Margarete Jung, Dresden; Ethel Karuth; Prof. G. Kleemann, Pforzheim; Erich Kleinhempel, Dresden; Charlotte Krause; Richard Kuühl, Berlin; René Lalique, Paris; Lauer & Wiedmann, Pforzheim; Margaret Mackintosh, Glasgow; Maison Moderne, Paris; M. Meyer, Mayence; Prof. Kolomon Moser, Vienna; Prof. Jul. Müller, Salem, Pforzheim; August Oesselmann, Darmstadt; Hans Ofner, Vienna; Alfred Oppenheim, Frankfurt-on-the-Main; M. Pfeiffer, Munich; Otto Prutscher, Vienna; Ernst Riegel, Munich; Ada Ridley; Aage Rolund; Rope & Woodward; K. M. Seifert, Dresden; H. Schmidt-Straub, Pforzheim; Schmitz, Breslau; F. Schmoll von Eisenwerth, Munich; Florence H. Steele; Prof. Curt Stoeving, Berlin; Architect von Tettau, Berlin; Louis C. Tiffany, New York; E. L. Vietor, Darmstadt; Heinrich Vogeler, Worpswede; Wadsworth; W. Weingartner; Vienna Werkstätte; H. Wilkens & Sons, Hemelingen; Bernhard Wenig, Hannau; Prof. F. Wolber, Pforzheim; Philippe Wolfers, Brussels; E. C. Woodward; Würbel-Czokaly, Vienna; F. Zerrenner, Pforzheim.

The jewelry, utensils, etc., represented in the selection consist of pendants, bracelets, bowls, flower-holders, brooches, necklaces, diadem, snuff boxes, fans, fruit-trays, girdle-clasps, lamps and candle-sticks, cuff-buttons, dress-pins, goblets, smoker's utensils, rings, combs, caskets, umbrella and cane-handles, table center-pieces, tea and coffee services, toilet-mirrors, watches, watch-chains, liqueur and wine bottles, mural displays, panels, etc.

As might be expected, the masterpieces of René Lalique somewhat dwarf the other designs; pages 42 to 55 are dedicated to this past master in the plastic art. Erich Erler-Samaden, Ernst Moritz Geyger, Ernst Riegel, C. B. Ashbee, are represented by extremely talented designs of great originality. Professors Josef Hoffmann, and Kolo Moser also have charming *pièces de resistance* to prove that this decadent age is not altogether without its masters in the gold and silversmithing art.

Councillor Koch in his despondent preface declares that "nowhere is the battle for art so dull and unenlivening than in the province of decoration and work in the noble metals." He declares that even among our wealthiest—where cost does not count—the value of the gems and the materials in which they are made up alone is appraised. Of these they know the worth, but of art value—nothing.

In this superb collection of art works is certainly contained a selection of exemplars that will prove invaluable in the workshops, studios and other vocations where gold and silversmithing have their home.

A few of these masterpieces, of course, have already found illustration in THE CIRCULAR-WEEKLY, but numerous of the pieces have never before been seen in publications, this side of the Atlantic at least.

Recent Customs Decisions on Statuary.

THE following cases in which duties on statuary were involved were recently decided by the Board of United States General Appraisers, New York:

STATUARY—CARVED TABLE.—Protest of National City Bank of New York against the assessment of duty by the collector at New York. The article in dispute consisted of a marble table with supports or legs carved in Pompeian style. The importers contended that it was statuary as defined in Par. 454, tariff act of 1897. Protest overruled. Note G. A. 6346 (T. D. 27302) and G. A. 5462 (T. D. 24758).

STATUARY—BUSTS—BAS-RELIEF.—Protests of John Wanamaker et al. against the assessment of duty by the collector at New York. Protests sustained as to bases for busts, on the authority of Abstract 9303 (T. D. 26902), and overruled as to bas-relief, on the authority of G. A. 5225 (T. D. 24048). The importers claimed the merchandise to be statuary as defined in Par. 454, tariff act of 1897.

STATUARY—BASES FOR BUSTS.—Protests of John Wanamaker against the assessment of duty by the collector at Philadelphia. The Board held bases for busts dutiable as statuary, as claimed by the importer.

A German correspondent reports that in the zoological gardens at Breslau there is a spider monkey which was operated upon for cataract, and now wears eye glasses. For more than a year after it was received at the zoo it was very healthy and lively; then it became very quiet, ceased to play, and crouched in a corner. It was examined and found to be suffering from cataract, so it was immediately taken to the eye hospital and operated upon. In less than a month it was fitted with a pair of spectacles, which it wears with becoming gravity.

Another New Form for Diamonds.

THE new form of cutting for diamonds, known as the "sun ray," now being introduced to the trade, has attracted attention of experts here and in Europe, who are studying its possibilities. The new cutting is the invention of Herbert Cooper, of the Cooper Diamond Co., who has secured patents for his design, and who believes it will revolutionize the cutting art. He claims that he produces a diamond with more brilliancy and better color, and with smaller loss, than is possible in the regular "brilliant."

The general shape of the "sun ray" diamond is similar to the regular brilliant, excepting that there is a little more weight left above the girdle. While the brilliant has a total of 58 facets, with 33 on the top, the "sun ray" has 74 facets, including the table and culet, 49 of these being above the

TOP VIEW OF SUN RAY CUTTING.

SIDE VIEW OF SUN RAY CUTTING.

girdle. This is necessary in order to produce a double crown effect, as may be seen in the illustration.

The upper crown is the same as on the brilliant, while the lower crown, being cut at a different angle, produces a raised point midway between the table and girdle, which by breaking the long facets produce a rose effect.

This rose effect is produced eight times, around the stone, and as each rose acts as an individual stone, more light enters and is reflected back, thereby causing a vast improvement in color, with double the brilliancy of the regular brilliant.

The "sun ray" diamond is the result of special study in the hope of producing more brilliancy than has ever before been shown in a diamond. The admirers of the cutting believe that saving in weight, increased brilliancy and improvement in color, without any material increase in the cost of cutting, are all effected.

C. E. Tucker, Greenville, S. C., has admitted his brother into the business, and the firm style has been changed to C. E. Tucker & Bro.
